Dr S P KAPADIA (Bombay) said he wished to enlighten the meeting on the bill to regulate medical education in India. In India there were many persons who, from religious or other reasons held faith in indigenous medicine and indigenous treatment. That sort of treatment was meted out to suffering humanity there by vaidas and hakims who had no knowledge of Western methods or treatment. The idea of the bill had been to educate those vaidas and hakims on Western lines and to give them a practical idea of treating poor persons who had faith in indigenous medicine on safe methods. In order to do that it had been desired to raise an independent class of persons who would give medicines according to the indigenous pharmacopoeia but based on Western ideas. However, the bill had been dropped on account of the death of the member of the legislative assembly who had taken a very keen interest in bringing the matter forward. His object in addressing the meeting was to remove any bad impression which might have been created by the paragraph in the report relating to a bill which had been negatived by the council of Hyderabad. Dr Kapadia offered his best thanks to all the secretaries of the Association who had helped him at every stage whenever he had required assistance.

The report under "Overseas Branches" was approved.

#### MEDICO-POLITICAL (resumed)

##### Trade Disputes and Trade Unions Bill

In calling upon Dr Bone to bring forward the Supplementary Report of Council under "Medico-Political" the CHAIRMAN reminded representatives of the many important motions which had still to come forward and the shortness of the remaining time available.

Dr BONE in moving approval of this part of the report, drew attention, in connexion with the item "Bills under discussion in Parliament" to the Trade Disputes and Trade Unions Bill. The representatives would see set out in what way the Council thought that that bill might interfere with the work of the medical profession. He did not propose to enter into details but he thought the Council had succeeded in protecting the profession, in so far as they might do so, in connexion with

the matter. They had received the utmost help from Sir Richard Luce, who had always been a great standby when the Association sought to do anything in the way of amending a bill before Parliament (Applause). With regard to the Laidlaw and Tenant Bill, that bill did not include the medical profession, and the Council had thought it would be advisable to get the House to do that. Unfortunately the Government had met the request with a flat refusal. However, Sir Richard Luce, who never knew when he was beaten, had gone about the matter in another way and had secured amendments which would, at all events, carry out a part of the Council's purpose, and which would provide that the bill would give members of the profession compensation for improvements. No doubt Sir Richard Luce would address the meeting on the matter.

Sir Richard Luce said that in regard to the Trade Disputes and Trade Unions Bill the position had been one of some anxiety because it was not quite certain from the original form of the bill whether, if medical men took part in a strike against the Government, they would not be *ipso facto* carrying out what would be an illegal strike. There must be two things in any strike for it to be an illegal strike. It must first of all be a strike which had not to do with the trade or industry concerned, and secondly, it must be aimed against the Government. He tried hard to get a decision as to whether or not the medical profession was a trade or industry. Some of the legal people said one thing and some another. That question had been left upon, but it had been quite definitely decided that if a strike was within a trade or industry it could not be illegal. One of the clauses of the bill laid it down that civil servants could not belong to any institution which had for its main object bargaining in matters of rates of pay and status. The British Medical Association had always laid it down that that was not its main object, but the point might some day have to be decided in a court of law. If it were decided that the Association was chiefly occupied in dealing with the terms of service of the profession, medical members of the civil service would not be able to belong to it. Again, if it was so decided, it was not unlikely that there might be in extension to other servants of the Crown, such as members of the army or navy or of the colonial services. With regard to the Laidlaw and Tenant Bill, after very considerable difficulty had been experienced in offer was received from the Home Secretary to make the clause in the bill which dealt with improvements apply to the medical profession. The clause with regard to goodwill was not now applicable to the professions. It had been very difficult to persuade the committee that there was any definite goodwill connected with the houses of medical men. The members of it seemed to think in terms, perhaps, of the consultant who lived in Harley Street. They thought that it did not make much difference to a man whether he lived at one number in Harley Street or at another. He tried to persuade them that in country districts the house meant very much to the general practitioner. When it came to a compromise being offered he found that it was extremely doubtful whether he should get anything at all if he did not accept it, and he agreed to take half a loaf as being worth something. The Home Secretary himself would move an amendment and the Government was going to support it.

Mr Bishop HARRIS said that when all other means of action had failed a letter signed by a dozen members of the Marylebone Division and sent privately to the member for Marylebone (the Attorney General) secured what was wanted, and the member thanked them for calling his attention to a point of great importance.

#### Remuneration of Doctors called in by Midwives

Dr W M RENTON (Dartford) had a motion To instruct the Council to take steps to secure a fee of £3 3s in place of the existing fee of £2 2s payable by local authorities to medical practitioners called in on the advice of midwives "for all attendances of a doctor at parturition (that is from the commencement of labour until the child is born) whether operative assistance or not is involved including all subsequent visits during the first ten days, inclusive of the day of birth."

He said that he was perfectly willing to withdraw the motion, being convinced that the Council would consider the whole matter as they had promised to do in connexion with ante-natal work.

The CHAIRMAN pointed out that if the motion was withdrawn it would involve the disappearance of the amendments to it which appeared on the agenda in the names of Winchester and East Norfolk. Those amendments could be moved, and then Dr Renton could withdraw his motion in favour of one of them.

Dr RENTON said that he would be willing to adopt the course suggested by the Chairman.

Dr BOVEY, as a point of order, observed that the Representative Body had already passed a resolution instructing the Council to consider the whole of the questions raised by the motion and the two suggested amendments to it.

The CHAIRMAN ruled that the point of order was a good one, and that the motion was out of order.

#### The General Medical Council

Dr C G H MORSE (Bournemouth) moved That the question of the need for revision of the existing representation, power, and procedure of the General Medical Council in order that they may more precisely comply with the changed conditions of medical practice be remitted to the Council for consideration and report.

He said that he wanted to put the matter in the form of an allegory. They had an old friend who was becoming a little senile, and who perhaps required a surgical operation or something of the sort. They were rather doubtful as to the right way of dealing with the matter. Therefore he suggested to the relatives—namely, the Representative Body—that they should have a consultation with the experts—namely, the Council—in order to see whether anything could be done for the patient. There were three main points involved. The first was in regard to representation on the General Medical Council. On the Register, over which the General Medical Council had autocratic control, there were 50,000 practitioners. Of that number probably half were general medical practitioners, but only six of them were direct representatives on the General Medical Council. As to the power of the General Medical Council, it consisted in considering allegations and delivering verdicts. The only crime which could be committed professionally was that of infamous conduct. Seventy years ago the accusation might possibly have been a perfectly good and sound one to bring, but nowadays it was nothing like wide enough. There should be some other form of accusation. The word "infamous" stuck, whether the General Medical Council found in favour of the medical man or inflicted the full penalty. Lately the General Medical Council had inflicted a curious form of punishment which was very much like telling a naughty boy that he must go back to his parents and bring a letter to say that he was behaving himself nicely. That was an undignified way of treating a medical man. Another method was for the President to inform the accused that the General Medical Council did not find the case proved, and so a penalty was inflicted, but as the press in the man's district attaching to the man, though he was let off. There was no such decision as "Not guilty." With regard to procedure, no court should be able to formulate a charge of misconduct in the absence of any complaint. Finally, the General Medical Council, which had the power practically to wreck a man's career, should be able to compel the attendance of witnesses, to administer the oath, and to call for documentary evidence. The possession of such power would bring it much more into line with the ordinary courts of law. He was not asking the meeting to do more than request the Council to consider the matter and to report.

Dr J S MASON (Warrington) moved to amend the motion by the addition, after the word "report," of the words "as to the requisite amendments to the Medical Acts." Dr Mason had said that he would like to see something like a rejuvenescence of the General Medical Council. The speaker did not know that the General Medical Council had ever shown any sign of juvenility. Bournemouth was to be congratulated on bringing forward this subject again.

Last year he himself proposed a motion asking the Representative Body to assert its confidence in the General Medical Council under circumstances peculiar to the time. That motion was rejected, and he thought it was a legitimate inference that the Representative Body did not itself think that the General Medical Council was all that it might be, therefore to be consistent, it ought to pass the Bournemouth motion, which he wished to add the words stated. It was now nearly twenty years since the Medical Act of 1858 was passed, and he thought it was safe to say that there had been greater changes in the practice of medicine and surgery in those twenty years than there were in the seven hundred years before them. The progress of medicine and surgery had outstripped legislative enactment. In reading over the 1858 Act he was always intrigued by Section 23, dealing with erasure from the *Medical Register*, and especially with the provision "that no name shall be erased from the Register on the ground of having adopted any theory of medicine or surgery." This clause offered a legal shelter for practices which might occur within the profession, but which would be wholly objectionable to and condemned by the bulk of the profession. He thought that clause should be deleted (Dr Mansou was prevented from completing his argument by cries of "Time!")

The Chairman said that the amendment was of a restrictive, not of a widening, nature.

The Warrington amendment was not carried.

Dr C O HAWTHORNE said that underneath the proposal for reform of the General Medical Council there was he believed a dangerous and even sinister design. It was impossible to believe that any attempt to revise the constitution of the General Medical Council would be governed solely by consideration of the wishes of the medical profession, and it might be that as a result of the demand for investigation and inquiry into the whole matter a Council would emerge much less welcome to the medical profession than the one at present existing. If the Council existed for the protection of the interests of the profession it would be a different matter but what they wanted and what they had was a body which was constituted with the object of getting an impartial tribunal to third the profession of medicine in this country could be relied upon by the public as having been subjected to proper training and examination. He dissented from an inquiry into the constitution of the General Medical Council, which might have different results from those anticipated in the balmy air of Bournemouth.

Dr WILLIE HENRY moved, and it was agreed to proceed to the next business.

#### The State and Medical Practice

Dr E R FOTHERGILL (Brighton) moved

That the Representative Body viewing with considerable concern the invidious inroads continually being made on private medical practice under the auspices of the State voluntary bodies and others and being of opinion that this is not only detrimental to the interests of the individual members of the medical profession but ultimately to all classes in the community instructs the Council to watch all such developments and actively to interest itself in safeguarding private practice amongst all groups in the medical profession and to develop through the Branches and Divisions closer co-operation with the local medical profession for that purpose.

Dr Fothergill said that the inroads on medical practice justified the Representative Body in stopping to see where they were going. Instances of such inroads were known to them all. Those made by the State included work in respect to the following: national health insurance, treatment of children for minor ailments—"school nurses can do this"—tonsils and adenoids, ear disease, and so on, notifiable diseases, venereal diseases, tuberculosis, rheumatism and heart disease in children, mental deficiency and insanity, orthopaedic clinics (175 local authorities had schemes for school children 129 for those under school age), regulations under the Midwives and Maternity Homes Act, consultations for puerperal pyrexia, pathological facilities, and so forth. Then there were the inroads made by voluntary bodies in the first place the

hospitals, with their contributory schemes, additional insurance benefits, ophthalmic benefit, and others. Again, there were the officers claiming recognition as equally skilled in sight testing and capable of giving adequate certificates, the provisions for ante-natal work—"midwives can do this"—and infant welfare the dentists were enabled to give anaesthetics for most requirements, and finally there was ultra-violet radiation, which could be given by anybody, including the hairdresser! This was a very serious situation. What was going to be the consequence? The young practitioner set out to do special work in private practice, and found that most of those who could pay him small fees were going into the hospitals. The non-insurance practitioner would shortly cease to exist, there would be nothing for him. The State was calling for a team of whole-time officers to act under medical officers of health. The only body which cared for the private practitioner was the British Medical Association, which required occasional pats on the back and a certain gingering up. This encroachment on private practice ought to be stopped. The private practitioner must be retained and secured in a position of freedom. The silent but ceaseless and plausible encroachment on private medical practice or a highly efficient and safely entrenched bureaucracy should be opposed. The advice of these bureaucrats on technical questions was extremely valuable but they had not the broad outlook or the wide experience necessary for viewing matters of health as a whole. It was no question of guineas that the private doctor was after, it was his ideal which was in danger—the ideal namely, to prevent and cure, and restore. He had a great trust placed in his hands. Was medicine going to be dragged, regularized and controlled, with reports innumerable and with no freedom of action or practice? Dr Fothergill said that he would be glad if the press could in some way loosely co-operate with the profession so that they could work together for the public health on rational and sensible lines. (Applause.)

Mr E B TURNER (Council) hoped the Representative Body would carry the motion. He had engaged in a good many extra Association activities and had been mixed up with many bodies, voluntary and otherwise. Acting on the committees of those bodies he had been sensible of the demand that all this work should be done by whole-time men and not by general practitioners. He had had a hard task sometimes in keeping up to the end of the British Medical Association. It was said that the general practitioner could not do the work as well as the whole-time man. To him it seemed absurd to claim that the whole-time man could run a school clinic or a maternity and child welfare centre even as well as—let alone better than—the experienced men in general practice. In the latter chose to set about it. The general practitioners could do it infinitely better. Of course it was administratively more easy to the authorities concerned to have whole-time men who were likely to be more "tame." Students were being brought up to envisage as part of their career that a large proportion of them would have to take on a very large amount of contract work. But the policy of the British Medical Association still insisted on the ideal—the relation between the medical practitioner and his patient in private practice, subject only to the law of the land, free from regulations, restrictions, and limitations. The men who were coming on would not have the same outlook on those matters as the men who qualified on the old lines. Should they go further and take on those jobs, the medical profession was sliding on a very slippery slope and at the bottom there was nothing but a cemetery, in which would be buried everything that the older men considered made their profession and work worth while and the only possible resurrection from that cemetery was the incarnated spectre of a whole-time medical State service. That was no bogey, the question was being put forward by the Labour party in his Division and elsewhere. Every one of the whole-time medical things which cut into their private individual work, which they could do so much better, was an obstacle removed from the way or those who wanted to start whole-time State service. It once that were instituted it would take all the human element out of the profession. (Applause.)

Dr C E DOUGLAS (Council) emphasized what had been so well said by Dr Fothergill. The situation had long been gathering. Many years ago one of the young lions of the *Saturday Review* delivered the dictum that when a medical case had gone beyond the stage of castor oil and quinine the best doctor was he who could send it to the appropriate specialist. If that were right, the man in general practice, instead of being the skilled adviser of his patient, would be merely a medical shopwalker directing the customer to the appropriate department (Laughter.) If they carried on the traditions of the profession, every man being well equipped in medicine, surgery, and midwifery, and if he saw to it that his patients regarded him with the respect due to an expert adviser, all would be well, but if they permitted themselves to be harried and harassed by public health authorities, by school medical officers, *et hoc genus omne*, then the end of the profession was near and they would be relegated to the dust-heap of might-have-beens (Applause.)

Dr H D WOODROFFE (East Norfolk), supporting Dr Fothergill's motion, said it was only too evident they were getting overidden by whole-time medical officers, but up to that point the motion had been approached from what might be called an altruistic standpoint. The material one was of great importance in a large number of rural areas. The previous day a medical officer of health had said that from 60 to 70 per cent of the midwifery in his district was being done by midwives under district nursing or other schemes. In thousands of rural areas the general work of the practice supplied the bread-and-butter, but the midwifery was looked to to put the jam on it. The "jam" was becoming less and less. In his district men had complained to him that the continual sliding away of midwifery work was causing serious damage to their practices. He was continually coming across cases of work being taken, first, out of the hands of the general practitioner, and secondly, out of the hands of the consulting staff. They were told that the general practitioner, with from ten to twenty years' experience or even more, was unfit to carry out what was ordinary general medical work. How many of them were not continually coming across, not the extraordinarily good work that the upholders of the present tendency would have them believe was being done, but cases of ghastly mistakes made through inexperienced junior public health medical officers of one type or another?

The CHAIRMAN remarked that probably every member would like to speak upon the resolution, as he would if he were not in the chair.

The motion was carried without dissent.

Dr E A STURLING (Tunbridge Wells) moved

That the Representative Body views with anxiety the increasing tendency to transfer the treatment of many diseases and conditions to whole-time medical officers as detrimental to the public health, that in the opinion of the Representative Body the general adoption of the following principles would result in benefit both to the public and the profession: (1) The function of the health authority should be confined as much as possible to the prevention of disease. (2) The work of the whole-time officer should be confined to administration, inspection, institutional, or consultative work. (3) Health visitors should be definitely responsible for treatment to a local practitioner for all cases treated by them, including expectant mothers.

The motion was not intended as an attack on the public health service. They all realized that they did not exist for their own benefit but for the public good. Some of the moves made on the old-time general practitioner were made under the aegis of whole-time public health officers. If those alterations and moves were for the benefit of the general public they would have nothing to say against them, if they were not, they should see if they could not amend matters. He called attention to the report of a conference between the British Medical Association and the Society of Medical Officers of Health. The gist of it was that there should be gradual co-operation and consultation between the different sections of the profession, so that they should work together. He suggested that the representatives of the public health medical service should consider the principles which the Association had put forward as worthy of discussion and consideration, and make alterations and amending proposals.

Dr RAVEN, in supporting the motion, said that general practitioners in Kent viewed the position with considerable apprehension. Those who worked under the Ministry of Health said they knew that they must co-operate with general practitioners, and yet the public services in Kent seemed to be developing without much reference to the general practitioner. His Division would like to know how those public services were developing in other counties. There seemed to be no set of principles on which public bodies acted, at all events with regard to the matter under discussion.

Dr D WARD (Public Health Service) said it was a matter not so much for rhetoric as for goodwill. One difficulty was to get a general practitioner to undertake these part-time jobs, and another was that if he did so there came a time when the work was less efficiently carried out, the reason being—and it was a very sound one—that he had not time to do it properly. Personally Dr Ward thought matters could be adjusted, and that there was no need for all will on either side. It seemed to him that the conferences already arranged between the Association and the Society of Medical Officers of Health to settle such questions as the salary scale might also take up the problem of how to bring the general practitioner more and more into the public health service.

Dr D ROXBURGH (Marlborough) remarked that in no country in the world was the standard of the man in general practice so high as it was in Britain, but a further improvement was permitted on his experience by the increase of whole-time men, it would make a definite contribution to his inefficiency.

Dr F RADCLIFFE said he was sure that if Dr Stirling looked at the third paragraph of his resolution he would realize there was considerable danger in it as it presently worded. It might well be thought that sooner or later it would lead to practitioners being called upon to attend before the General Medical Council. He therefore suggested that it should be made to read "Health visitors and nurses should be definitely responsible to a local practitioner for patients dealt with by them, including expectant mothers."

Dr J STEVENS (Edinburgh) seconded.

Dr J A MCDONALD (West Somerset) said he had been watching for some years the insidious creeping in of public health departments on the domain of treatment, and he warned the younger members of the profession that, if it were allowed to continue in the way in which it was going at present, in a very few years there would be a State medical service. It was high time that some definite steps should be taken in the matter.

Mr BISHOP HARRIS asked if it would be agreeable, when the motion became the substantive motion, for him to suggest that the matter should go to the Council for consideration and report, as there were certain very definite terms in it which, if action were taken upon them at once, would have consequences that might not be desirable. For instance, it was said that the function of the health authority should be the prevention of disease, and presumably under that definition would come the whole of vaccination against small-pox. Again, it was suggested that the work of the whole-time officer should be confined, among other things, to institutional work and to consultative work—that was to say, that he might have a free field to seize all the hospital work of the country and consultation work of all kinds.

The amendment to the third paragraph, "Health visitors and nurses should be definitely responsible to a local practitioner for patients dealt with by them, including expectant mothers," was then put and carried, Dr STURLING agreeing to the amendment.

Mr BISHOP HARRIS's suggestion to the effect "That the Representative Body views with anxiety the increasing tendency to transfer the treatment of many diseases and conditions to whole-time medical officers as detrimental to the public health, and refers to the Council the consideration of the general adoption of the following principles" (that is, the three paragraphs in Dr Stirling's resolution, the third of them as amended), was also put and agreed to.

## Street accidents

Dr SPARKING further asked the Council to take steps to ensure that a fee was guaranteed by the county council or other authority when medical men were called to street accidents. His Division desired also that the fee payable should be in accordance with the police tariff, which was already accepted by some authorities when a constable called a medical man to an accident. He said his Division quite appreciated that many county councils and boroughs paid police fees on the scale put forward but there were instances in which the policeman at an accident did not send for a doctor, but some spectator sent for him, and the doctor was unable to obtain any fee at all.

Dr BOVE could not agree to accept the motion. The Association had already secured everything which he thought it could secure centrally. It was purely a local question, and it was the fault of Tunbridge Wells if they had not got a proper system in their area. In 1920 the Representative Body had considered the matter, had laid down certain rules and had asked the Council to do its best to get things adjusted. A deputation from the Association had been received by the Home Office and as a result the Home Office had sent a circular letter to every chief constable in the country, asking him to make arrangements in his area for paying for attendance upon these accident cases. The final paragraph of that letter read: "In settling the amount of the fee and other necessary local arrangements the Secretary of State thinks that it may be found useful to adopt the course which has already been taken in some places of consulting with local representatives of the British Medical Association." What could be got more than that? Why did not Tunbridge Wells go and do it?

Mr HOWARD STRATFORD (Kensington) said that local authorities could not be expected to pay fees because someone had sent for a doctor. He believed that if the police sent for a doctor the fee was almost invariably paid.

Dr R. M. MANNING-WHITE (Mid Cheshire) said that the police were given instructions from headquarters that they were not to send for a medical man. They were told that if they could get one of the crowd to send for a doctor that was the correct thing to do. The county were supposed to pay it the policeman, disobeying the rules, sent for a doctor. The difficulty in the way of getting the remuneration when the doctor had been sent for by the police was extremely great. The Association ought to insist that county councils should be responsible for every street accident which required medical or surgical assistance.

Dr DUNN moved that the meeting now pass to the next business. The motion was seconded and carried.

## Married Medical Women

Dr S. FARMER (Bishop Auckland) moved a resolution seriously deprecating the recent action of the Durham County Council in dismissing one of its women medical officers from its staff on the ground of her recent marriage. His resolution continued: "Marriage is to be a cause for dismissal if this should be stated at the time of appointment." He said that when the medical officer concerned was appointed she gave up an appointment in London to go to Durham and there was not a word either in the advertisement or in any agreement made that marriage would be a bar to the holding of the appointment. His Division contended that the fact should have been plainly stated either in the advertisement or in the agreement. The reason given—namely, that the husband was in receipt of an adequate income—was not a sound reason for such a drastic step. For dealing with women and children at the welfare centres it was a positive advantage to have a married medical officer. A woman having been appointed, the same conditions should apply to her as applied to men.

Dr CHRISTINE MURRELL (Council) said that while agreeing with the general tendency of the motion she found difficulty in supporting it because it appeared to her that in two of its phrases it faced two ways to a certain extent. She therefore proposed as an amendment the deletion of the words "and is of opinion that if marriage is to be a cause for dismissal this should be stated at the time of appointment" and the substitution for them of the words "and reaffirms the Association's policy of equality

of status and salary for medical men and women." The latter phrase was the phrase embodied in one of the previous decisions of the Representative Meeting. In 1926 it decided to take every step to enforce the policy of equality of status and salary. She concluded that it would be generally accepted that the question of single blessedness or marriage would be a question of status. If the resolution as originally worded were passed, public authorities would not be slow to take the hint which it contained. The motion did not deal with the question of whether women should continue their medical work after marriage. That main issue was left untouched. The question the meeting was asked to decide was whether they should be debarred from doing it, which was a different thing. It was a question whether they were to be legislated for or whether it was possible to trust that the instincts and the wisdom of medical women were sufficient to enable them to come to a decision themselves. It was certainly a very serious step to sanction—or, by a lack of comment to acquiesce tacitly in—a tendency to debar whole groups of medical practitioners from the right to continue to practice in medicine.

Dr E. K. LE FLEMING said that the policy of the medical profession and of the Association had always been that of equality between men and women. The only grounds on which they recognized that there should be a distinction was in regard to capacity for doing the work for which payment was made. The proposer of the amendment made no claim that one of her sex who by reason of marriage, might be unable to do her work to the full capacity should have any special consideration, but contended that in the case of equal work there should be equality of status for men and women. Dr MURRELL's amendment was carried but on being put as a substantive motion.

Mr BISTON HARRIS moved the deletion of the reference to the action of the Durham County Council. As it stood the motion said that the Representative Body deprecated certain action taken by a responsible statutory body. The meeting was sitting in judgement upon a body in regard to a matter of which it had no cognizance.

The amendment was seconded from the meeting and carried.

The CHAIRMAN said that what remained of the resolution was the following—

That the Representative Body reaffirms the Association's policy of equality of status and salary for medical men and women.

Dr CHRISTINE MURRELL protested against the side-tracking and torpedoing of the motion, and she moved as an amendment that this motion carry in front of it the words

"That the Representative Body seriously deprecates the action of any local authority in dismissing one of its women medical officers from its staff on the ground of her marriage."

This amendment was carried, and was combined with the reaffirmation set out above, which was carried also.

## Other Medico-Political Resolutions

Dr JOHNSON SMITH (Bournemouth) moved to instruct the Council to approach the authorities concerned with a view to obtaining an increase in the fees paid to doctors for casual cases among the Post Office telegraphic survey department. He said some of his colleagues in his Division were very anxious the Council should inquire into the matter because the rules and regulations governing the scale of fees were very much pre-war and they considered that the present terms of remuneration were altogether inadequate for the work done.

Dr BOVE said the best way to deal with the proposal was to refer it to the Council from which it would get to the Post Office Medical Officers Subcommittee. He accepted the motion.

Dr MORSE (Bournemouth) also moved to instruct the Council to approach the authorities with a view to obtaining an increase in the fees paid to doctors for examining recruits for the Territorial Army.

Dr LE FLEMING said they were asked to examine recruits for the Territorial Army at 2s a head and for many years they had done it for the sake of patriotism.

SIR RICHARD LUCE said that until this year the money for payment of the fees came direct out of the Estimates. One of the economies sanctioned by the War Office was to reduce the Estimates by the sum granted to the county associations for that specific purpose. He raised the question at the time with certain county associations, and they told him the fees would still be paid at the present rate by individuals. It was for county associations to decide whether they would pay them, they had no specific funds for the purpose. It was not an opportune time to ask them to pay higher fees when they had lost the whole of the money granted for the purpose directly out of the Estimates.

DR E. M. COWELL (Croydon) spoke of the extreme difficulty of getting hold of any fund at all, even for general Territorial purposes.

DR BONE argued that the proposition was futile. The Association had spent a good deal of time and money in going to the Territorial Force Associations and the War Office, each asserted the fault lay with the other. Any number of doctors were willing as a matter of patriotism to make the examinations for nothing. There was not the slightest enthusiasm in the Divisions for any such movement, and complaints were negligible. The fact that the movement started in a public health resort discounted its value. It Bournemouth was wise it would do what Devonshire had done—refuse to do the work for less than 5s. and see what happened.

DR MONSE expressed his willingness to withdraw his amendment, and it was accordingly withdrawn.

This concluded the Report of Council under "Medico-Political," and the Chairman, remarking that Dr Bone had been advocating the Council's policy at the Representative Meeting for a longer time on that occasion than any Chairman of Committee within his recollection, congratulated him on the manner in which he had presented his lengthy report. (Applause.)

### ELECTIONS

The MEDICAL SECRETARY announced the result of the election of eight members of Council under By-laws 47 and 53 (d). The successful candidates were as follows:

DR F. J. BUILDON	MR McADAM EECLES
DR J. W. BONE	DR R. LANGDON-DOWN
DR H. G. DUM	SIR RICHARD LUCE, M.P.
DR C. E. DOUGLAS	DR J. A. MACDONALD

It was also agreed by the meeting, on the motion of Sir Richard Luce (Chairman of the Naval and Military Committee), that Lieut.-Colonel F. O'Kineely, I.M.S. (ret.), be reappointed the representative of the Indian Medical Service on the Council for the period 1927-30.

### LUNACY LAW AND MENTAL DISORDER

DR LANGDON-DOWN (Chairman of the Lunacy Law and Mental Disorder Committee) brought forward a memorandum presented by his committee (see Paragraph 213 of Supplementary Report of Council, SUPPLEMENT, June 25th, p. 252) dealing with the Report of the Royal Commission on Lunacy and Mental Disorder and the resolution of the last Annual Representative Meeting relating to the Hunnett v. Fisher case. He moved that the memorandum be approved and referred to the Council. There were, in the memorandum, two main topics—the protection of the practitioner and the extension of facilities for the treatment of patients suffering from mental disorders. In the course of the discussions in committee it came out very clearly that any proposal with regard to the one had its inevitable reflex on the other. Fortunately, there was general agreement as to the ends in view. It was desired to improve and make efficient the protection of the doctor and to give greater freedom of proceeding in bringing patients under treatment. At the present time the atmosphere generally was very favourable to both these propositions. The Royal Commission had quite clearly expressed its sympathy with both points of view. A recent leading article in the *Times* had shown that that journal also was on the side of the medical practitioner in this matter. The *Times* insisted that protection must be

increased, though it declined to countenance the idea that the profession should not be held responsible for reasonable care. There was general unanimity in the profession in regard to the objects in view, it was only as to the method of securing those objects that differences arose. Such differences were natural, because matters at present were in the melting-pot. At the moment there was a great chance of loosening the shackles which had hampered procedure in regard to mental disease. What they wanted to do was to get rid, as far as this might properly be done, of the intervention of the judicial authority, and, instead, to look to those methods of inspection, registration, and control which the Board of Control so well could carry out. As a result of the Royal Commission the Board of Control had gained increased prestige but it was also proposed that the Board should be somewhat reorganized in its structure and strengthened, and therefore made more fit to carry out such duties as these. Any step which recentrated judicial interference in the matter, such as establishing a court to decide what treatment was necessary for the patient and to issue a verdict, seemed to him to be retrograde and likely to revive the rigid forms of the past—unsatisfactory to the patient and derogatory to the profession.

With regard to the protection of the doctor, there were various possible methods. One was the claim on behalf of the doctor who signed a certificate for the same immunity as was accorded to a witness in a court of law. Another was the strengthening of the present provisions of the Lunacy Acts for the purpose of widening off actions. The Royal Commission had proposed an alteration with regard to this which was fully set out in the memorandum, with certain additional strengthening elements suggested by his committee. What about the claim for witness-status? This postulated at once the idea of a court. The only justification for it was that in a certain sense it might be claimed that the judicial authority was holding a court. Dr Langdon-Down did not think that this claim was in the interests of the patient, certainly it was contrary to their general idea of progress in the treatment of mental disorders, and, above all things, it meant a repudiation by the profession of the duty of care for the patient. It was made clear, when the British Medical Association gave evidence before the Royal Commission, that to grant complete immunity to the doctor who signed a certificate would mean that he was not to be held to account even if he had shown lack of reasonable care. The claim for "witness-status" was urged upon the Royal Commission by all the eloquence that Dr Hawthorne and others could muster, but the Commission reported against this concession and advised Parliament not to grant it. But it also advised Parliament to strengthen the protection afforded to the doctor by placing the *onus probandi* in regard to reasonable care on the shoulders of the plaintiff and removing it from the shoulders of the doctor. Was there any reasonable prospect of going to Parliament and obtaining a modification of the law of the land in such a way that the medical profession would be relieved of the duty of exercising reasonable care of the patient? And how far would such immunity, even if conferred, meet the case? The whole idea of this immunity of a witness rested upon the intervention of a judicial authority, and therefore it would involve, obviously, no protection in regard to those actions in which the judicial authority had not been called in. There were various actions which had to be taken by doctors who had care of insane patients in which no judicial authority was called in, and in such circumstances the doctor would still be open to attack, even though the protection of witness-status were given. It was obvious, therefore, that it was insufficient to have such protection, and that protection must be secured and strengthened with regard to all actions taken under the Lunacy Acts, no matter whether a judicial authority was called in or not.

Coming to the mode of strengthening the present law as suggested by the Royal Commission, coupled with the Association's additions, Dr Langdon-Down said that Parliament would probably be willing to concede such additions, as the atmosphere was very favourable. The proposal of assessors had precedents already in the courts.

It would cover everything done in pursuance of the Act as it was at present, and it would go as far as possible without abrogating the duty of care. He need not go far to discuss the question of a body of official certifying doctors. He felt convinced that the Representative Body would not wish to have that. Similarly he did not believe they would wish, in any fresh legislation, that before a doctor dealt with his patient he should always have to go to a relieving officer or public official to authorize him to do so. That was a move in the wrong direction, and they ought to look for protection in some more straightforward way than that.

The suggestion in one of the amendments was that a threat might be used in order to enforce the Association's views. It would be unfortunate to use threats in order to force a particular solution of the problem especially when the public attitude was so favourable, and it might lead to results very different from those desired. There was some reason to expect that in the new position that had arisen since the Report of the Royal Commission, and in a still further new position which he pictured coming when fresh legislation came about, that legal actions would be less frequent or cease, because the public would be much more satisfied and those actions would be received with much less sympathy. In any case the representatives would agree that the Harnett case was a very exceptional one. It was accompanied by very substantial damages which was a great temptation to other malcontents to "try their luck." A case like the Harnett case, which in some of its details was unfortunate for the profession, had tended to produce a crop of cases which was causing much anxiety in all ranks of the profession. The memorandum was in harmony with all the views he had expressed, and it was reasonable to think that the profession would secure the protection it desired if the plans therein set out were put into effect. He therefore asked the representatives to approve the memorandum and to refer it to the Council, partly because he did not claim any moral inspiration for it or any absolute completeness for it, and in particular because the legal aspect of the matter was extremely complicated. There was also the fact that at least one case might still come before the Appeal Court. When that had happened or if there was no appeal, then when the Representative Body met again they would have, in the Council deemed fit counsel's opinion on the legal position, in particular regarding the matter of the duty of care. If there was no duty of care imposed upon doctors in signing certificates under the common law then the question fell, but he did not think they ought to repudiate the duty of reasonable care as that appeared to him to cut right across the best professional traditions. Let them not sacrifice their general aim for medical advance by concentrating obstinately on one particular solution which might be unattainable, and, if attained, might be imperfect in its results. (Applause.)

Dr C. O. HAWTHORNE (Marylebone) moved as an amendment

That the representatives thank the Lunacy Law and Mental Disorder Committee for the memorandum on the Report of the Royal Commission on Lunacy Law and Mental Disorder refer it to the Council and request the Council to re-appoint the committee with instructions to take whatever steps are possible to secure what the Report of the Royal Commission declares to be fair—namely that the medical profession should not be asked to perform their essential part under the menace of litigation which even if unsuccessful may spell financial or professional ruin.

He desired to enter a protest against the suggestion that there was a body of opinion in the medical profession anxious to avoid responsibility for professional action duly taken. When Dr Langdon Down had been speaking on that particular subject it would not have been inappropriate on his part to have put forward from the findings of the Royal Commission the statement that in spite of long and intimate investigations they had not been able to discover a single case in which a patient had been improperly certified and deprived of his liberty. (Applause.) Such a statement constituted most emphatic and important testimony to the degree of good faith and care with which members of the medical profession exercised their responsible duties in the administration of the Lunacy Act. He expressed his regret that that emphatic statement by the

Royal Commission found no place in the memorandum ("Hear, hear"). Dr Langdon Down had invited the Representative Body to approve this comprehensive document generally and without limitation or restriction or amendment. Personally he was nervous about giving approval generally to any document, for the general assent which he was invited to give to-day was very likely to be thrown in his teeth to-morrow as a personal guarantee and as a pledged word. The memorandum contained a very large number of propositions which in his judgement ought to be fully debated, yet it was presented in such a form that only a single discussion could take place upon it, and every critic of it was restricted to five or ten minutes' speech. He submitted that this presentation to the representatives of the memorandum en bloc was excessive and oppressive. What was the exact status of that document? It was not approved by the Council. It did not come with any recommendation from the Council. It had not been discussed or even seen by the Divisions. Again, there was in the memorandum a flat contradiction to the resolution of the Representative Body in 1924 claiming a certain form of protection for medical practitioners who were involved in individual cases in the administration of the Lunacy Act. The memorandum therefore could look for countenance and support neither to the Council, nor to the Divisions, nor to the standing orders. Possibly the chairman would consider carefully whether as a matter of constitutional procedure, the motion could actually be presented to the meeting. In any event, if it was presented, he would ask the representatives to note exactly what it asked them to do. It asked them to give an unqualified and unlimited endorsement to a complex series of propositions when even the existence of those propositions was unknown to the constituents whose views representatives were here to present. The object of the amendment was to save the Association from a premature entanglement in the complexities of the memorandum, and to urge that, until the document had been debated properly, it was a rash thing to sign it formally with the approval of the Representative Body. The amendment kept alive the possibility of pressing upon the legislature and upon public attention the claim that when a medical practitioner took part in an individual case in the administration of the Lunacy Act he pronounced a technical opinion, and that the responsible decision to restrict or not to restrict the patient's liberty was a decision which was taken by a judicial officer who was appointed by the law expressly for that purpose ("Hear, hear"). If the representatives approved of the document, that claim so far as the British Medical Association was concerned finally and formally fell to the ground for they would have endorsed and supported one of the propositions which said that to that claim there was an insuperable objection—and an insuperable objection was one which no one could remove. This was now stated upon the authority of a committee which had formulated and presented to the Royal Commission the very claim which the representatives were now told it was impossible to support. The committee, having got rid in the memorandum of the claim originally sustained by the Representative Body, offered a measure of protection, as it believed which it provided under three different headings every one of which might itself be the subject of a debate. He must pass from them owing to limited time in order to say generally that in his judgement the Representative Body was entitled to a very different document from that presented to them. In particular, he should have thought in view of the anxiety so widely existent in the profession, that the representatives would have had a brief lucid readable attractive statement of the position which existed at the present moment, in so far as that could be gathered from a knowledge of the Lunacy Acts and from the interpretation given to those Acts recently in courts of law. The committee owed it to themselves to have put as strongly as possible the claim which they had originally supported before the Royal Commission and having presented all the reasons in support of that claim they should have proceeded to show how they had all disappeared before what was now alleged to be an insuperable objection. Still more that explanation and

justification of the original claim might have been supported, and could have been supported, by copious extracts from the medical press, from certain lay journals, and from statements made by the judges. Again, it might have been supported by the quotation with which he had commenced his remarks, and also by the statement by the Royal Commission that the medical profession ought to be protected, not only from litigation, but from the menace of litigation. He would like to ask Dr. Langdon-Down if he was prepared to engage from the platform and to the meeting that the three findings which he had put forward as being sufficient fairly to protect the practitioner did actually satisfy the ideal which the Royal Commission said ought to be satisfied—namely the protection of the medical practitioner from the menace of litigation. In deciding the question they must not only be moved by general arguments either for or against the memorandum, but they must be moved by the facts of history. The facts of history had been carefully put forward by Mr. Justice McCutcheon, who had said from the judicial bench that during the past seven years a number of medical men who had acted in perfect good faith had been exposed to the most prolonged, harassing, and costly litigation on the allegation that they had acted without reasonable care in a matter which was the most difficult, delicate, and indefinite in the whole range of medical practice. This chapter of history must not be allowed to repeat itself. It was no doubt competent to the State to say that the diagnosis of mental disorder and the treatment of mental disorder were matters to be decided by the medical profession and if, acting upon that proposition, any medical practitioner proceeded to interfere with the liberty of his patient, he must take the responsibility for that action just as he took the responsibility for any other form of medical treatment. But if the State said, "When a question of the liberty of the subject arises we will not allow your medical treatment to be applied until such treatment has received the formal approval of our officers" the responsibility from that moment rested on the judicial authorities, and could not be passed on to the medical practitioner. (Applause.)

Dr. JAMES NEIL (Hendon) seconded the amendment. He said that his Division viewed with great concern the position of any doctor who was called upon to certify under the Lunacy Acts. They felt it was essential that they should have greater protection than the law at present gave them but they did not want absolute immunity. If a medical practitioner was deliberately negligent in the matter of medical certification they did not claim that he should be immune from legal action. What they claimed was that no action should be possible against a medical certifier without reasonable cause. The Royal Commission shifted the onus of proof from the defendant to the plaintiff. That was excellent so far as it went. The memorandum suggested, in addition, the appointment of medical assessors. They might be very valuable, but the system would be a pure experiment, and it would be necessary to wait to see whether there would be derived from it the benefit that was hoped for. There was one respect in which it would not help. However much Section 330 of the Lunacy Act was strengthened, there would still remain the very great danger to the medical profession that a doctor who had signed a lunacy certificate might be attacked, but not under the Lunacy Act at all. He might be proceeded against by way of an action for libel in respect of the reasons he had stated on his certificate. That had been found in experience to be a great danger. A certificate given by a medical practitioner under the Lunacy Act was really medical evidence. If the evidence it contained were given in a court of law on oath he would be protected from an action for libel, and he should be similarly protected in regard to the written statements in the certificate. If the Council would press for immunity in that respect, and would press for the strengthening of Section 330 in every possible way, the Hendon Division would be satisfied. Then practitioners would not be subjected to a living nightmare as they were at present.

Dr. W. GRANT (Mablethorpe) supported the amendment. He said that the Mablethorpe Division had some very special qualifications for expressing an opinion on the

matter. In the first place it was the largest Division of the Association. In the second place many of the leading London mental specialists practised in the area. It contained members who, in addition to their medical qualifications, were qualified by their experience as parliamentary candidates, as medical journalists, as members of the legal profession, and as mental experts. Further, some of the more prominent figures in the recent notorious cases in the law courts resided in the district. The Division was not satisfied with the present position. The menace which the Royal Commission rightly described as one which ought not to exist had not been removed. His Division asked that it should be. They wanted the matter referred back to the Council, and they hoped that the Council would not throw up the sponge at the end of the first round.

The CHAIRMAN OF COUNCIL said that the matter was not one which had been considered fully by the Council. The Council, owing to stress of time and circumstances, had not been able to deliberate fully on the very valuable report which Dr. Langdon-Down's committee had put before it, and it therefore asked Dr. Langdon-Down to bring forward the memorandum on behalf of his committee so that the Representative Meeting could discuss it. It was not a case of referring back to the Council a matter in regard to which it had expressed a considered opinion.

Dr. J. W. BONE asked the meeting not to accept the amendment. It would be remembered that the policy of the Association, a policy deliberately adopted by the Representative Body, was that of asking for protection, and the particular kind of protection asked for was what was now called, in a way of describing it shortly, witness status. If the meeting did what Dr. Hawthorne asked them to do—namely, send the memorandum back without comment—they would leave the Council without any indication of its mind in the matter. Now that the representatives from all parts were met they should say what they wanted. All medical men wanted proper protection. They all felt it was necessary. They had said so, and had gone on saying so. They had almost persuaded everybody that they ought to have it. But that was not the point. That fight was won long ago. The question was, how proper protection was to be secured, and that was the question that the Representative Meeting ought to answer. If they passed Dr. Hawthorne's amendment they would Burke that question. The witnesses of the Association had faithfully carried out its orders to put forward the best case they could for witness status. The matter had been discussed at length by the Commission by way of question and answer. Dr. Langdon-Down and Dr. Hawthorne were the people who bore the brunt of the examination. In its report the Commission in effect said "On grounds of public policy you may not have witness status. The interests of your profession are subsidiary to the general interest." It was for the Representative Body to say whether it was going to withdraw from the position it had taken up or whether it was going to stand with its back to the wall, and say, "Witness status or nothing." If it passed the amendment proposed by Dr. Hawthorne it would be shirking the issue, and asking the Council to decide it. There were other ways of getting protection. First, there was the offer of the Commission, shifting the onus of proof. The committee did not think that was enough, and had made some additional suggestions. One was the question of discipline, another was that of disciplining some members of the profession. How was it possible for an honest medical opinion to be given ten or fifteen years after the occurrence of the events about which the opinion was given? Yet such opinions were given. The committee suggested that a possible method of attacking the problem was by preventing the profession giving such evidence. The Representative Body should decide, though not in detail, in what way it sought protection, and the first stage was to turn down Dr. Hawthorne's amendment and put up something that they could really discuss. Was it possible that were exaggerating the trouble? There had been three notorious cases in the last year or so. Not 2 per cent of all the cases in which medical men were in trouble arose in that way. He believed an insurance policy of 5s a year would cover all the risks that any ordinary medical man ran.

in connection with signing lunacy certificates. I really did not wish to keep this class of work in the hands of the practitioner. If they said they were not going to sign lunacy certificates except on impossible terms, the Government might say they would make other arrangements, and the general practitioner would be a source of income.

The hour of adjournment (6.30) having arrived, the Chairman stated that unless the meeting consented to some extension of time it would not be able to complete the agenda on the morrow. After discussion it was decided that the meeting should be resumed at 8.30 the following morning.

#### A Medical King's Prison

Sir RICHARD LUCE proposed and Dr COOMBES seconded and it was agreed that congratulations be sent to Captain C. H. VERNON, a member of the Association, on winning the King's Prize at Bilev for 1927.

#### Tuesday July 11th

The Annual Representative Meeting opened at 8.30 a.m., and adjourned at 9.30 for three-quarters of an hour in order that representatives might attend the opening of the Annual Exhibition. Dr BRICKENBURY was again in the chair.

### LUNACY LAW AND MENTAL DISORDER

(continued)

The discussion was continued by

Dr H. G. L. HAYES (Mid Sussex) who said that since the Representative Body gave its sanction to the Council the report of the Commission had been issued, and the Commission turned down the claim of witness-status. Possibly before the next Representative Meeting legislation might be forthcoming on the subject and it was highly desirable that the Council should be in a position to give an authoritative opinion. The protection of the medical practitioner of course was not the only important thing in the Report. Then first duty after all was to the patient. He hoped the Council would also take into account the points to be presented in the discussion on this subject in the Section of Mental Diseases later in the week.

Dr H. C. BRISTOWE (Bristol) said that when the Act of 1890 was 'in the boiling' the bill was sent to Bethlem Royal Hospital or whose staff he was a member at that time for observations and he remembered that it is then stated that the protection of the medical man was as nearly complete as possible. It had since become evident that that protection was far from complete. The suggestions of the Royal Commission no doubt represented a great advance in this respect but they did not forestall all that the profession required. The one thing they should be granted was witness-status. He had already said to the magistrate: "It is for you to decide not whether the patient is insane but whether the patient should or should not be restrained." They might have to be content with the recommendations of the Royal Commission for the time, but they should seriously consider keeping the question of witness-status definitely in the forefront.

Dr E. R. FORREGER (Brighton) said with regard to the committee's suggestion that medical assessors should be appointed to assist the judge that judges largely ignored the opportunities they had at present of having medical assessors in other cases, and if this proposal were carried the position would be the same, therefore what was the good of pressing for it? He considered very dangerous another suggestion of the committee, pressing for the introduction into the form of any judicial detention order words indicating that before signing the order the judicial authority had satisfied himself that the medical practitioner concerned had exercised reasonable care. What they should urge was that the patient wanted treatment—that was the first thing—and the doctor was there to determine the whole thing, the State, if necessary, coming in later. According to this suggestion the magistrate was to hold, in effect, a "court of first instance"

in order to determine whether in an entirely medical question the doctor had exercised reasonable care. Where would such a magistrate stand in any other proceedings? Would he be subpoenaed by the medical certificate?

Dr A. NODD (Windsor) thought the weak spot in the procedure was in the early stage when the two doctors had to hand the certificate to someone in authority. He himself had been signing certificates for over thirty years and had never yet encountered a justice of the peace with regard to any of them. It was a matter largely of common sense. He would have supported Dr Hawthorne more enthusiastically if there had been more promise of expedition in his proposal.

Dr D. ROXBOROUGH (Macclesfield) said that Dr Langdon-Down, to whom they all owed a debt of gratitude, and the members of his committee had done their best to secure a complete immunity as they conceived to be possible, but they had failed and in the present memorandum had thrown up the sponge saying that it was impossible to get complete immunity. But in this question which is one as between the medical profession and the lawyers the profession was winning its case and if they were only determined they would gain a complete triumph. They could get it they were resolute on the subject complete immunity from all civil actions because public opinion which really in the end decided this matter was swinging round tremendously in their favour. The public were realising the danger of what the *Times* had called 'the lunatic at large'. He felt that the outcome of the present discussion might well be to give public opinion a further stimulus in that direction.

Dr T. RADCLIFFE (Oldham) indicated certain defects in the law as it stood particularly in the procedure for taking action in the case of persons judged to be insane who, there was reason to believe were improperly treated by their relatives or by those in whose charge they were. He brought forward also that important class or class known as cases in single care—cases which were bound to be certified but which could be treated with perfect safety in their own home under their own general practitioner. He disapproved of the memorandum as it stood holding that it should be amended and strengthened in the direction of calling attention to certain patient anomalies which the recommendations of the Royal Commission did not cover.

Dr LANGDON-DOWN said that he quite realized that the document before the meeting had come to it without previous full consideration by the Council. The purpose of the Council and of the committee in sending it to the meeting was that they might receive such additional help as it could give. In several respects the discussions had been advantageous. Dr Hawthorne's suggestion that the memorandum ought to have gone to the Divisions seemed to be going unnecessary far because in the objects it had in view the committee were absolutely at one with the previous action of the Divisions. He was prepared to accept the amendment which Dr Hawthorne had moved, because he did not wish the meeting to give their assent and then a final and definite approval to the proposals contained in the memorandum. He suggested that they should be referred back to the Council, which no doubt would take account of what had been said in the course of this discussion. It went back to the Council with the thanks and instructions of the Representative Meeting as Dr Hawthorne proposed he would convey to the committee the feeling of the Representative Body. Dr Hawthorne had every opportunity on the Committee of moulding the memorandum in the direction he desired. The committee had had the privilege of hearing on several occasions the arguments which Dr Hawthorne had addressed to the meeting. The committee which was about equally composed of general practitioners and others had felt—he thought he might say unanimously—that the sort of discussion that was possible in a committee but which was so difficult in a large meeting, unable to accept those arguments. He must take up the challenge which Dr Hawthorne had thrown down in regard to the menace of litigation. Dr Hawthorne took a paragraph from the report of the Royal Commission, but he did not take all

the cognato passages. He had rather led them to suppose that the Royal Commission, having placed that paragraph in the body of its Report, endorsed Dr Hawthorne's conclusions in its recommendations. Who would suppose that in fact the Royal Commission turned down witness-status and recommended a strengthening of Section 330 as providing the protection which he demanded from the menace? The support which Dr Hawthorne had received even from his secondor was at complete variance with the main object in view. Dr Neal turned down the idea of complete immunity and made a suggestion which might result in a useful addition to the memorandum—namely, that the committee should deal with the question of possible libel. But he (Dr Langdon-Down) understood that hitherto there had been only one case of libel. He was prepared to accept the amendment moved by Dr Hawthorne because it had the effect that he (the speaker) desired of sending the memorandum to the Council for further consideration so that it might be extended and improved if possible in accordance with the discussion that had taken place. But he would accept it only on the understanding that the last paragraph, in which the quotation from the Report of the Commission occurred, was not to tie their hands so that the protection from the menace of litigation was to be interpreted in the sense of complete immunity.

Dr C O HAWTHORNE, also in reply, said he was more than content with the position which had been realized by the decision of Dr Langdon-Down to withdraw his motion in favour of the amendment. Though he had been a member of the committee responsible for the memorandum and had not been so fortunate as to agree with his colleagues, this did not absolve him from the duty of carrying the argument to the representatives as the supreme court of the Association. The effect of the amendment was to preserve freedom for the Association in relation to future developments relative to the amendment of the lunacy laws. Had the memorandum been adopted the Association would have been firmly held to certain propositions which everybody must admit had been inadequately debated in the Association ("Hear, hear"). On the other hand, by adopting the amendment the Council was left free to consider contributions from all sources. It was peculiarly important that the British Medical Association should have a free hand at the present time, because the law itself, as it existed to-day, had a cloud of uncertainty attaching to it. He ventured one more quotation from Mr Justice McCardie's judgement in the de Freville case—namely "If he had been freed from authority he would have thought that the effective cause of the detention was the order of the justice and not the certificate of Dr Dill. The justice could decide as he pleased, whatever the certificate stated. The doctor's certificate, although an essential requirement, was a mere opinion which possessed of itself no operative force." Could the case for the profession be better stated than that? Admittedly it was not the final voice of the law, which could only be pronounced by the House of Lords, but when the Association found that such a view of the law could be taken by one of His Majesty's judges, surely there was little reason indeed why they should depart from a position which some of them had been careful to urge from the very outset. Another reason for preserving the Association's freedom was that legislation was sure to come comparatively soon. Why, therefore, should they leave aside the opportunity which any proposed legislation would afford of pressing their views upon the legislature, and of pressing those views after they had been reconsidered in the light of the present meeting?

The amendment was then put and carried without dissent.

At this point Dr J A MACDONALD moved that the standing orders be varied so that speeches of openers of any motion or amendment should be allowed five minutes and other speakers three minutes. Sir JENNER VERRALL seconded the proposal, which was agreed to.

Dr TEMPLE GREY (Marylebone) moved

That it be referred to the Council to consider the desirability of urging upon the legislature that the judicial authority under the Lunacy Act, 1890, must assume full responsibility

for the commitment of a person alleged to be of unsound mind, and that such judicial authority be either a county court judge or a magistrate with special qualifications such as a medical barrister.

Dr W GRIFFITH seconded the motion.

Dr L D PARSONS (Ceylon) pointed out that in Ceylon every lunatic was put in an asylum under detention by process of the court. Lunatics were sent first to a house of observation, they were kept under observation there, a medical officer was summoned, and he gave his opinion to the effect that the person ought to be put in an asylum. The magistrate thereupon might or might not issue an order. He himself remembered one case in which the magistrate had disagreed with him, and had refused to issue an order.

The motion was then put and carried.

Dr D ROXBURGH (Marylebone) moved to direct the Council to appoint a committee for the further consideration of the Royal Commission's report, and to secure on the committee "an adequate number of general practitioners on whom the responsibility of signing certificates under the Lunacy Act mainly falls."

The motion was seconded and carried, Dr LANGDON-DOWN saying that he saw no objection to its acceptance.

Dr STARLING (Tunbridge Wells) moved to refer to the Council the urgent need for the provision of observation wards to which patients can be compulsorily sent where conditions, whilst doubtfully justifying certification, are such as to make them a nuisance or danger to themselves or others.

This motion was agreed to.

#### PARLIAMENTARY ELECTIONS

Dr E KAYE LE FLEMING, having secured approval of the Annual Report of Council under "Parliamentary Elections," went on to move that the Council be authorized to accept the offer of the trustees of the National Insurance Defence Trust (SUPPLEMENT, June 25th, p 254) and to adjust the composition and procedure of the Parliamentary Elections Committee accordingly. In doing so he said he desired to make a few general statements on the position of the matter. The British Medical Association represented the medical profession of the country. Very great pains were taken at its conferences and elsewhere to try to formulate a general policy which was in effect the general, sober, and sane view of the profession. It was extremely valuable that that policy should be known and understood, and if there was one place where it was more necessary than any other that that opinion should find expression it was in the House of Commons. Their position with the Ministry of Health was increasingly satisfactory. The Ministry recognized that the Association could speak with authority for the profession, but the Ministry was not the House of Commons. In the House of Commons there was an extraordinarily wide group of people. Very few of them, indeed, even knew what the British Medical Association was or what it stood for. A good many of them had the most extraordinary views of the Association's constitution. The Association was looked upon in some quarters as a very powerful trade union. That was a great compliment to a body that had never been a trade union, and never would be. (Applause.) It was a compliment in that it showed that the Association, as a collection of perfectly free agents, was able, by the soundness of its views, to take more effective action than such a powerful body as a trade union. The medical profession, by reason of its work, was very seldom able to have representatives in the House of Commons. If a medical man reached that distinction he, as a rule, very rapidly developed into a politician rather than a medical man, and his views seldom represented the general view of the profession at large. If he might intervene in his argument for one moment, he would like to emphasize again how fortunate the Association was at the present moment to have in the House of Commons a member of the profession like Sir Richard Luce. (Applause.) When Sir Richard Luce spoke in the House of Commons he lost no authority and he abandoned none of his personal views in order to speak his mind on medical matters. Knowing, as he did, the feeling of the profession at large, it was

perfectly certain that the expressions he put forward were in conformity with the general views of the profession. The Parliamentary Elections Fund (Dr L Fleming concluded) had been instituted a good many years ago and he had often told the representatives that they had allowed it to languish for lack of support. At Bath and Nottingham suggestions had been put forward that the fund might be supported and augmented by some assistance from the Medical Defence Fund or another kind. This had been discussed by the trustees of that fund, and the result of that discussion would be seen in the recommendations now before the meeting.

The motion was then put and carried.

Dr L. FLEMING further moved the following:

That the Representative Body express the opinion that in view of the offer of the trustees of the National Insurance Defence Trust members be urged to contribute to the Medical Representation in Parliament Fund, so that the volume of individual contributions to that fund shall reach a total at least equal to the promised contribution of the trustees of the National Insurance Defence Trust.

Dr W. JOHNSON SMITH (Bournemouth) said that he had had the honour of bringing up the resolution which established the principle of medical representation in Parliament so that there should be in Parliament members who could be depended upon to express and support the views of the British Medical Association. It was not possible to get very far without money and he would appeal most earnestly to members of the Association to send regular contributions to the Medical Representation in Parliament Fund. If each member subscribed five shillings a year there would be produced about £8,000 a year. The original aim was to raise £10,000 a year and he hoped that that aim would be attained.

The motion was carried.

Dr L. FLEMING further moved to instruct the Parliamentary Elections Committee to pay special attention to the possibility of securing the election to Parliament of medical candidates to University seats. In doing so he said that difficulties were caused by what he would call "the political die-hards who were pained to think that a penny or their money went in support of any man, however sound his medical views might be with whose political conviction they disagreed. It was therefore thought wise to concentrate on university constituencies."

The motion was carried.

## PUBLIC HEALTH AND POOR LAW

### Health Lectures

Dr L. LEWIS-LOYD (Chairman of the Public Health Committee) moved as a recommendation of Council:

- (i) That medical practitioners should not give health lectures under the auspices of local authorities gratuitously and
- (ii) that although the lecturer must in every case necessarily be approved by the local authority there is no reason why any particular class of practitioner should be excluded from delivering such lectures.

He said that the question had been raised as to whether general practitioners should be debarred from delivering health lectures in their own area. It might very well be that they should not deliver them in their own locality but on the other hand, it might also very well be that people would prefer to have lectures by their own doctors rather than by strangers. The Council saw no reason for any differentiation being made. As to the question of payment for the work the Council was of the opinion that the work should not be done gratuitously but that the amount of the payment should be governed by the status of the practitioners giving the lectures.

The motion was carried.

Dr LEWIS-LOYD moved that the remainder of the Annual Report of Council under 'Public Health and Poor Law' be approved. He pointed out that in Paragraph 142 of the report it was stated that all action to be taken locally must be by Divisions of the British Medical Association. If members would turn to Paragraph 229 of the report issued in the SUPPLEMENT of June 25th they would find there that that statement was amplified and defined. He was perfectly certain that the Representative Body would endorse the statement. In the report there was a reference to the status of medical

officers of health in local administration. The paragraph contained a quotation from the annual report of the Ministry of Health for 1923-24. The Council took the very strongest exception to the suggestion contained in that report that the medical officer of health should be under the control of the town clerk or the clerk of the council, as the case might be. In its report the Council regularized the position of deputations from the central office to local authorities in regard to public health matters.

The motion was adopted.

### Public Education in Health

Dr LEWIS-LOYD also moved on behalf of the Council:

That the Representative Body approves the proposals of the Council for action by the Divisions and Branches in assisting in the education of the public in health matters and instructs the Council to take all necessary steps with a view to putting the proposal into operation.

He said this important matter arose from an instruction of the Representative Body at the Nottingham Meeting and the Council submitted it to a special subcommittee under the chairmanship of Dr Hillman. Its report to the Public Health Committee was submitted to the Society of Medical Officers of Health who were considering the subject from a different point of view and who replied that they considered their scheme should be regarded as supplementary to that of the British Medical Association. The Council was of opinion that a Hastings-Lee scheme similar to that delivered by Sir Berkeley Moubray should be given from time to time to the public and that good work could be done by Divisions and Branches carrying on active propaganda amongst the people. In view of recent legislation it was suggested that each Division should call the attention of the local authority of its area to the provisions of the Public Health Act of 1925 either by deputation or memorandum, and offer to assist in the work. In the meantime the Division must have consulted the public health officer of the authority.

Mr HOWARD STANTON considered that the matter should have been very carefully considered in consultation with local secretaries. In the past nine months the Dogs' Protection Bill, medical charities, the interviewing of Members of Parliament, the question of economic commencing salaries, and other things had given them an enormous amount of extra work and if more was added some things would be left undone. A thing like inaugurating public lectures would have to be done very well. The Chairman or the Public Health Committee said that the work would be done in consultation with medical officers of health, but it was the public health people's job to lecture the public. Further expenses were piling up in the Divisions. Treasurers of Branches would have a good deal to say if the suggestion was carried into effect.

Mr E. B. TURNER was most thoroughly in favour of the motion. It was essential they should have lectures at intervals such as the excellent one given by Sir Berkeley Moubray this year. They would have great effect in spreading the light among the more educated and intelligent portions of the community. Out of a fairly large experience he offered hints to those who would put the resolutions into effect. They must "go down into the pit and speak to the man and woman in the street where they found them. It was important that the man who went could be heard and that his hearers understood what he said. There was no difficulty in getting audiences or women because they wanted to know and women would bring men to mixed gatherings, but men alone needed the "prim of a film before or after the powder of the address. The Association's action in this matter would do a great deal to restate the profession in public estimation and raise it to the eminent position in which it stood in the eyes of those who really knew about it.

Dr J. F. WALKER (Southend) said his Division was one of the earliest to realize the importance of this kind of work. For the last six or seven years they had instituted an annual Civic Lecture and among the lecturers had been Professor Leonard Hill, Sir Arthur Newsholme, Sir Thomas Horder and others. The results were a little disappointing. The audiences numbered between 200 and 300 but they did not come from what Mr Turner had

called "the pit" Professional people, school teachers, clergymen, members of health authorities and education committees, and others who could be influenced attended. The pill must be coated with sugar—such as a social function or civic affair. Crudely put, what was proposed would act as an advertisement for the British Medical Association and would counteract the idea that the Association existed only for financial interests and was a selfish trade union.

Dr LEWIS-LLOYD, replying, said that as himself secretary of a Branch and a Division he knew that in many secretaries were overburdened. He suggested they should form an *ad hoc* committee for the work and appoint a special secretary. Questions of cost and payment must be left to each area. The lectures by local authorities must, of course, be paid, what was now proposed was a totally different class of work. The idea was not exactly to advertise the British Medical Association, but rather to reaffirm the position of general practitioners and members of the Association, and make clear that they were not always out for £ s d, but for the public health of the nation, and to help to build it up from a C3 to an A1 community.

The motion was carried.

Dr LEWIS-LLOYD, in moving the remainder of the report under "Public Health," mentioned that from June, 1926, to June, 1927, the Association had dealt with 180 appointments under the scale of minimum commencing salaries, and in 151 of these the scale salary had either been offered or secured after negotiation. (Applause.)

Dr BAILDON (Southport) asked the Council to arrange with the Society of Medical Officers of Health that, in areas where cases of small-pox were known to exist, special propaganda work for vaccination should be organized. Anti-vaccination propaganda in Southport had been very active, and it seemed to them in Southport that some counter-measures should be taken. One method would be to arrange for the circulation of the late Dr McVail's pamphlet.

Dr LEWIS-LLOYD accepted this suggestion, and said that the Association had recently brought Dr McVail's pamphlet up to date.

### POOR LAW REFORM

Dr BRACKENBURY, the Chairman of the Poor Law Reform Committee, on behalf of the Council, moved approval of the Annual Report under "Poor Law Reform," Dr Hawthorne meanwhile taking the chair.

Dr Brackenbury said that since this matter was set out in the Annual Report events had moved forward. The Minister of Health had withdrawn the original proposals and substituted others, and he would refer representatives to two recent articles in the *BRITISH MEDICAL JOURNAL* in which the new proposals were sufficiently expounded. The proposals were tentative—not cast in the form of a parliamentary bill—and it was important they should be regarded in that light. The cardinal point with which the Association was concerned was the unification of all forms of health administration under the local authority. The first proposals were welcomed as affording an opportunity of this, but the new proposals did not give that same opportunity in any areas except county boroughs, where it might be possible to relieve the unification of administration. Instead of boards of guardians being abolished, as they were under the old proposals, the boards, in more convenient areas, and with more convenient methods of election, would be preserved, and therefore the opportunity of distributing the health and educational functions of the guardians amongst the appropriate committees of county or urban district councils would not be so easily available. Under the Association's policy they had always insisted on the desirability that on committees concerned with health administration there should be co-opted members of the medical profession and others interested in health administration. That was not given under the new proposals. What was given was the power of certain county councils or boards of guardians to co-opt persons who were experienced in the administration of the Poor Law. He felt that it was much more important to get on to the committee of management persons experienced in health

administration, and he hoped that pressure would be brought to bear to secure at least that alteration.

The report was approved.

### NATIONAL HEALTH INSURANCE

Dr H G DAVY, Chairman of the Insurance Acts Committee, said that the report under "National Health Insurance" dealt with a number of important matters which had advanced further since the report was prepared. On the question of certification and the extraordinarily increased claims for sickness benefit last year, which caused so much anxiety, the matter had been dealt with, and it had been arranged with the Ministry that, while maintaining the right of free choice of doctor, a patient would have to give a fortnight's notice of intention to change and to submit his medical card to the Insurance Committee to be stamped to that effect. This prevented a patient changing in a huff, and also had other advantages. With regard to disciplinary procedure, he hoped to be in a position to make a statement to the Panel Conference in October, and to submit a detailed scheme of modifications of the present procedure which, he hoped, would appeal to insurance practitioners as likely to be so satisfactory that they would be willing to forego making an appeal to the courts.

Dr H D WOODROFFE (East Norfolk) moved, with reference to a paragraph in a letter of the Medical Secretary to the Ministry of Health, contained in the Annual Report, a resolution expressing the view that the widespread custom of individuals insured under the National Health Insurance Acts being, in addition, members of other sick benefit societies actually led in many cases to patients drawing a larger income while sick than while at work, and that the Representative Body considered this state of affairs to have a considerable bearing on the merits of certification, and instructed the Council to make representations to the Ministry accordingly. He had been told by the president of one of the largest of the approved societies that in agricultural districts like the speaker's own there were an enormous number of men working on a maximum weekly wage of 30s who, by various side insurances, were drawing anything from 35s a week from that source.

The motion, however, was withdrawn on the strength of Dr Davy's statement about the new conditions with regard to change of doctor.

### Ophthalmic Benefit

Dr DAVY moved the following as a recommendation of Council:

That the Representative Body approves the principle of providing ophthalmic benefit through clinics in large centres as an arrangement auxiliary to the existing scheme of attendance by ophthalmic surgeons privately, subject to the arrangements under which such clinics are established being approved by the Council.

Dr DAVY said that this was an important matter of principle. The Representative Body had on many occasions strongly expressed the opinion that extended services of consultants, as of general practitioners, should be run on the lines of private practice. The principle at stake here was the establishment of clinics for a particular service, and he wanted to warn the Representative Body that this was the first special service which had become part of national health insurance. As at present administered, it was an additional benefit and not applicable to all insured persons. But considerable weight was likely to be given to this particular benefit in the organization of future extensions of specialist service. The question of ophthalmic benefit had been dealt with by a special committee of the Association, of which Dr Wallace Henry was chairman, and he would like Dr Henry to put before the meeting the reasons for accepting this resolution.

Dr WALLACE HENRY stated that at the present time the method of dealing with so-called ophthalmic benefit was that a patient who felt he or she had something wrong with the eye went to the panel doctor. The panel doctor gave a certificate that the patient was in need of ophthalmic treatment, that certificate was forwarded to the approved society, and the society settled whether the patient was to go to an ophthalmic surgeon or whether they would take

the responsibility upon themselves or sending the patient direct to an optician. A very large number of societies adopted the latter course, and when the optician found he was unable to satisfy the needs of the case he sent a certificate to the society, and those few cases selected by the opticians were sent to the ophthalmic surgeon. There were a very large number of cases which were dealt with by the opticians which did not derive the full benefit which they might very well expect if they received them direct through a method which was carried out on a systematic basis. Those societies which sent the patients direct to the optician all frankly said that if the financial circumstances made it possible to do so they would prefer to send them to an ophthalmic surgeon, but they said that the numbers had been so great especially in large industrial centres that it was quite impossible for them to find the money to pay even the guinea fee which had been agreed upon between the British Medical Association and the Ministry of Health and certain of the societies. As a result of that practically 80 per cent of the insured people were at present sent direct to opticians. A certain combination of societies had formed themelves into an additional charitable society known as the National Insurance Benefit Society and had in certain areas set up ophthalmic clinics of their own. The exact conditions under which these clinics were being set up were not known. Pending a decision of the Representative Body the committee had tried to discourage ophthalmic surgeons from taking positions in those clinics, but those positions had been taken in several cases by young men to whom, he supposed, the financial emoluments offered were a matter of considerable importance. The committee felt it was very desirable that the Association should take the matter in hand itself, that it should be empowered to go into the whole question as to whether ophthalmic clinics could be set up satisfactorily and if so how they could best be organized, but until permission was obtained from the Representative Body to do so it was useless exploring the matter very closely. A scheme had been submitted to the committee which appeared to present reasonable probability of being carried out successfully. It was quite appreciated that as that scheme stood there were grave difficulties associated with it, but if permission were given to go into the matter it was thought that the difficulties might be eliminated and that a really satisfactory scheme for providing ophthalmic benefit through medical men to practically all the insured population might be carried out. He had been informally told in conversation with members of one or two leading societies that if the scheme were carried through the whole weight which was at present given to sending patients to opticians would be turned the other way and that those societies would as far as possible try to induce their members first of all to consult an ophthalmic surgeon prior to going to an optician. They said quite reasonably that it was impossible for them to say that all cases should go to an ophthalmic surgeon because it was the inherent right of every Englishman to say he would not go to a doctor but to someone else if he so preferred. Consequently the committee felt it was impossible to make it a definite condition that everybody should be sent, but it hoped that the vast majority of the people concerned in a clinic system was set up—as an auxiliary to the present system—would receive better attention and that the result would be satisfactory, not merely to the medical man concerned but to the insured patients as a whole.

Dr G. W. KENDALL (City of London) supported the recommendation. The change of policy was a matter of great importance not only to ophthalmic surgeons but to the whole profession. It might interest the meeting to hear something of the views of the ophthalmic surgeons who had to carry out the service. He had an opportunity recently at a meeting held in Oxford of learning their views. The suggestion that clinics should be formed was considered at the meeting, and after a lengthy discussion and a good deal of explanation it was agreed that the recommendation of the Council should be supported. Ophthalmic surgeons from all parts of the country were present, as were several members of the British Medical Association Ophthalmic Committee. The recommendation would receive the support of ophthalmic surgeons.

Dr E. J. PRIMROSE (Clasgow, North-Western) said that he had the feeling that the motion as now worded would give rise to the impression that there was to be a change of principle. That was not, he understood, the intention of the recommendation. He thought that the motion should be so amended as to make the matter quite clear. The principle that was at stake was that of giving private attendance to insured persons at a modified fee. He suggested that the motion should read, "That the Representative Body while not approving of the principle, yet recognises the expediency under certain circumstances or agreeing to the temporary provision of ophthalmic benefit." If the motion was carried as it stood, all the societies would be wanting to come in under the new principle of having all their cases seen in clinics with the exception of a few who maintained their right to be seen individually.

The Chairman suggested that the motion might be moved with the word "suggestion" in place of the word "principle" and with the words "in certain circumstances" inserted after the word "centres" and Dr Dain agreeing the motion in this altered form was carried.

Dr PETER MACDONALD (York) wanted the Representative Body not to blink the fact that clinics so far as ophthalmic benefit was concerned had come to stay and that they would be extended. He was quite in agreement with the amended motion but he considered that in giving assent to it the meeting had done one of the most important things of its present session.

Dr DUNN then moved that the remainder of the Supplementary Report or Council under 'National Health Insurance' be approved.

Dr L. D. BRIERLEY (Cardiff) said that when the ophthalmic surgeons of Cardiff considered the Supplementary Report of the Council they expressed the opinion that not all the ophthalmic cases were going to be brought to the clinics but only certain selected cases which had probably passed through the hands of opticians in the first place. They considered that to examine ten new cases in two hours would be quite impossible in the circumstances. They also considered that their already reduced fee of one guinea was being still further reduced when they were expected to see eight or ten serious cases at 8s 6d per head. He had been asked to move an amendment somewhat in the following terms. That in reference to Paragraph 253 of the Supplementary Report of Council the Representative Body is of opinion that the number of new cases seen at the clinics mentioned in Paragraph 253 should be eight and not ten.

Dr O. WILLIAMS (South West Wales) seconded the amendment.

Dr WALLACE HENRY said that the recommendation was not put forward for adoption by the Representative Meeting. It was simply the outline of a scheme which had been submitted as one which was worth discussing. The whole question of numbers and fees and all the details would have to come up for complete discussion by the Ophthalmic Committee and the Council at a later date.

The Chairman said that the meeting was asked to give leave to the amendment to be moved in the following form: "That in reference to Paragraph 253 of the Supplementary Report of Council the Council be asked to consider whether the number of cases should be eight rather than ten."

Leave was given, and the motion was carried in its altered form.

The remainder of the Supplementary Report of Council was approved.

#### Extended Benefits under the National Health Insurance Act

Dr GRIFFITH (Marplebone) moved to request the Council to urge the Ministry of Health to provide for extended benefits under the National Health Insurance Act. He said that the subject was not a new one. The proposal had received the sympathy and the support of the Representative Body on previous occasions.

Dr DUNN said that he could only assure the meeting that from the beginning of the insurance system what was proposed in the resolution had been urged upon the Ministry. The Ministry was as anxious as anybody to do what was

desired. The question was one of money and money only. He believed that as soon as there was enough money available an extension of benefits would be provided for the whole insured population. If the motion was adopted the Council would be pleased to pass it on to the Ministry. The motion was carried.

### HOSPITALS

Mr H S SOUTTAR (Chairman of the Hospitals Committee) moved on behalf of the Council

That where the remuneration of a consultant for regular periodic visits to a Poor Law hospital is on a salary basis, the amount of that salary should be a matter of arrangement between representatives of the local medical profession and the appointing authority, but regard should be had to the maximum fees laid down in Minute 66 of the Annual Representative Meeting, 1926, and/or to the basis of £2 12s 6d for consultant sessions of not more than two hours, with an allowance for mileage where necessary.

This was agreed to without discussion.

Mr SOUTTAR further moved, on behalf of the Council, the deletion of the following paragraphs of the Voluntary Hospital Policy

34 The honorary medical staffs may find the following suggestions valuable in connexion with the disposal of the moneys in the special fund, and accordingly the Association suggests to the hospital staffs concerned that one or more of the following methods of distribution of any moneys in the special fund may be found suitable

- (a) To the members of the honorary medical staffs for their own personal disposal,
- (b) for the assistance of members of the medical staff in connexion with research work,
- (c) for the purchase of instruments, books, etc., for the use of the medical staff, or for lending to other members of the profession,
- (d) for the initiation or development of post graduate teaching in the institution,
- (e) the institution of a local medical benevolent fund administered by the members of the honorary medical staff for dealing with necessitous cases (for example widows and children of former colleagues),
- (f) grants to any recognized medical benevolent fund or institution, or
- (g) otherwise as the medical staff may decide.

36 Any concession of a nominal recognition of the services of the visiting medical staff by a percentage of honorarium should be accepted without prejudice and on account of the existing general economic conditions.

He said that the object of the deletion was simply to unload the policy, making it a little simpler and it was felt that these two paragraphs rather weakened their contention that payments made by a patient were essentially payments for treatment.

The deletion was agreed to.

Mr SOUTTAR moved the further recommendation

That the visiting medical staffs of hospitals should seek to secure arrangements with boards of hospitals for the satisfactory recognition of their services in accordance with Section XII of the Voluntary Hospital (United Kingdom) Policy of the Association since any failure in securing such recognition is detrimental to medical work of all kinds and ultimately to the general public.

Mr SOUTTAR said that they had a fairly complete policy with regard to hospitals, but until it was adopted by staffs of hospitals all over the country it was simply inert. The Council wished to impress upon visiting staffs the importance of adopting the policy.

This was agreed to.

### Treatment of Early Stages of Mental Disease

Mr SOUTTAR also moved, as a recommendation of Council

That specialist work in connexion with the treatment of patients suffering from mental disease in its early stages, whether at hospitals or clinics, should not be carried out by whole-time medical officers of public health or local government authorities, but on a part-time basis by medical practitioners who have special knowledge of the subject but who need not necessarily be devoting their whole time to such special work.

Thus, he said, referred to specialist work which was now being taken up so largely in clinics and hospitals with regard to the treatment of early mental disease. It had led to a certain amount of misunderstanding, and a letter had been received from the President of the Royal Medical-Psychological Association (Dr J R Lord) expressing his feelings on the subject in the strongest terms. Dr Lord wrote "This is one of those vulgar errors which owe

continued currency to the unthinking and the uninformed—lugeurs in the last century—and to the timorous practitioners of pretence." Mr SOUTTAR said that there was no desire to exclude any group of medical men from their proper work, but he held that, as far as possible, medical work should be carried out by private practitioners—that it should not be transferred to those holding whole-time appointments under public authorities. That was the policy of the Association, but, on the other hand, they did not wish it to be thought that they desired to exclude whole-time men from these appointments.

Mr E W G MASTERTON said that a member in his own Division, who was medical superintendent of a very large hospital for early mental cases, had explained to him how much offence the resolution as it stood had given, and he hoped that by inserting a few words it might be made more acceptable. He proposed that it should read "That specialist work should not necessarily be carried out by whole-time medical officers," and that the words "where such are available" should be added after "practitioners."

Dr J R GILLISIE (Belfast) said that in Belfast quite recently the board of a hospital, on the suggestion of the staff, invited the medical superintendent of the mental hospital, which was under the Belfast Corporation, to undertake to conduct a clinic for early mental cases in connexion with the voluntary hospital, and he had consented to do so. His Division desired this whole question to be referred back to the Council.

Mr Masterton's amendment was accepted by Mr SOUTTAR, and the amended resolution was carried.

In moving approval of the remainder of the report Mr SOUTTAR called attention to the admirable resume on contributory schemes which had been drawn up by the Deputy Medical Secretary (Dr G C Anderson) and published as an appendix to the Annual Report. It was a masterly exposition of a somewhat complicated subject. He also referred to the amicable relations which now existed between themselves and the Hospital Saving Association. The British Medical Association had insisted that patients should take letters from their practitioners, and also that the method should be used as far as possible on consultative lines. The Hospital Saving Association had met them admirably on both those points, and was doing all that it could to carry them out.

The report was approved.

### Middle-class Hospital Policy

The CHAIRMAN, in the absence of the representative of Salisbury, formally moved a resolution in the name of that Division that the Representative Body instruct the Council to consider the formation of a middle-class hospital policy.

Mr SOUTTAR said he was very happy to accept the resolution, as the proposal was one to which they might very well direct their attention.

### Contributory Schemes for Hospital Benefit

Dr E R FOTHERCILL (Brighton) moved

That in view of the inroads being made into private medical practice by the contributory schemes which are springing up all over the country, the Representative Body is of opinion

(a) That members of a contributory scheme should be regarded no longer as objects of charity, and therefore that the full cost of benefits offered should be covered by the premiums with or without supplementary payment, paid by or for the members, and

(b) That the time has come to express the policy of the Association concisely in certain cardinal principles as set out below and instructs the Council actively to engage itself during the coming year by means of conferences with committees of such schemes, hospital authorities, staffs of hospitals, Branches and Divisions, and otherwise with a view to securing their general adoption.

(i) That the income limit for membership of a contributory scheme should not exceed the maximum scale as it appears in the hospital policy of the Association.

(ii) That so far as is possible and consistent with the best interests of the members arrangements for consultative or specialist services should be made with private practitioners rather than with a voluntary or cottage hospital.

(iii) That for this purpose (a) there should be free choice of private practitioner by member and of member by private practitioner and (b) the method and amount of remuneration should be determined by the local medical profession.

(iv) That except in emergency a member should be admitted to benefit only upon the introduction of the attending practitioner

(v) That recognition should be made of the services of the medical staff of the hospital attending members not by a percentage of the money received by the hospital from a contributory scheme, but by a method and amount determined by the local medical profession

[In order to assist in determining the method and amount of remuneration to be asked for the respective specialist services the local medical profession should consider (i) payment for work done on a tariff of fees (ii) payment on a session basis (iii) payment by an amount to be determined annually or for a period of years (iv) payment by a combination of two or more of the above ways]

Dr Fothergill said that club practice began with the benevolent neutrality of the doctor. He became the servant of the society—overworked, harried, underpaid. He was told to look to the women and children for his money. The income limit was totally unsatisfactory. He was not represented on the club committee. There was no legal medical organization to assist him, no free choice of doctor or of patient. Club practice was now developed in hospitals. The staff doctor was the servant of the club. He was told to make his money out of the "kudos" of being on the staff. There was no income limit, or one which was not satisfactory, in many of the schemes. He was not represented on the club scheme in any way. There was no free choice of specialist by the patient. The local medical organization was available, but it was quite ineffective to assist him. In fact, they now had the old 1910 domiciliary club practice in the hospitals. There were over 120 of those organizations in existence, 90 of them had definite contracts with the hospitals, totally against the British Medical Association policy. Not one embraced the whole of their policy. When it was put up to one club, the reply was that it would ruin the club. Was it not time the British Medical Association did something? The Association had in sections or parts of sections the whole policy outlined by Brighton. When the Association dealt with club practice in 1910 they outlined six cardinal principles, and they met with success in every one because they were united. Would hospital staffs in order to stop the club practices to which they objected, resign? It would probably come to that. The six points were an income limit, free choice, administration not by the societies, the method of remuneration and its amount to be determined by the professional representation—he considered that it was not necessary—on the clubs, in addition, the arrangements to be with private practitioners to admission to benefits only on the recommendation of their doctor. To take one point—free choice of doctor. Clubs were making contracts alone with hospitals and practitioners who were quite as competent as the physicians and surgeons attached to the hospitals who treated the patients, were losing a source of income which they would earn if the club made a direct contract with them. In accordance with the British Medical Association policy, why should not the club arrange to pay the consultant and for him to see the patient in his own house? Why should he go to the hospital at all? The London Hospital had put its foot down on the insured patient, who had been pouring by thousands into the out-patients' department. Another point was that the ordinary private practitioner not the consultant, could do a large amount of the detailed work which did not require the high skill of a surgeon if paid a fee by the clubs. Yet a patient went into the hospital, and nothing was paid to the doctor of the hospital and nothing to the general practitioner who could do the work. Brighton proposed that they should outline the whole question of club practice run by the so-called contributory societies, and hoped the Council would put it through. People who joined the clubs that were established and efficient were no longer objects of charity; they received great benefits that no firm would offer for a premium. When the clubs shared out the money among the hospitals they paid only 80 per cent of what was due to them for administration and accommodation, and nothing whatever to the staff. The whole question was in the hands of the hospital staffs, who were becoming club doctors.

Mr SOUTER said he had very great sympathy with many of the Brighton proposals. It was difficult to get hospital staffs to take interest in the matter. The proposals were complicated and covered a great deal of ground, and if Brighton would agree to their being referred to the Council they would have a most sympathetic hearing, both from it and the Hospitals Committee.

Dr FOTHERGILL assented, and the meeting agreed to refer the proposals to the Council.

## NAVAL AND MILITARY

Sir RICHARD LUCE, M.P., moved approval of the report under "Naval and Military." He said that a further gain had been obtained for the Royal Army Medical Corps—the marriage allowance to officers serving in India. Efforts to make it retrospective were not successful. There was still considerable difficulty in getting a sufficient number of recruits. There was no reason why young men recently qualified should not join the services. The present was an advantageous moment for them. Although there was a considerable block in the ranks of majors in the Royal Army Medical Corps, there was such a shortage of the junior ranks that there must be very rapid promotion. One point that had been conceded, that men might take one year of their service doing hospital work, was bearing some good fruit.

The report was approved.

## MEDICAL CHARITIES

Dr J. F. WALKER (Chairman of the Charities Committee of the Association) moved that the report under "Benevolence" be approved. He thought there was no need to emphasize the straits to which some members of the profession or their dependants had been reduced. Last year the Royal Medical Benevolent Fund received over 600 applications for relief. The Charities Committee felt strongly that the only way to meet the position was by local appeal. Between thirty and forty Divisions had already signified that they were instituting such a local appeal, and he knew that steps in the same direction were being taken by many others. If each member would subscribe one guinea a year all the money required would be forthcoming. He suggested that the committee of each Division should set up a subcommittee to go through the names of members, and that each member of the subcommittee should undertake to approach a certain number of them with a view to obtaining their subscriptions. It could not be said that the members of a profession like the medical profession were unable to subscribe one guinea a year for their poorer brethren—about the equivalent of a new golf ball once every six weeks. The reputation of the British Medical Association was at stake in this matter. There were signs that before long the reproach would be removed from the profession, and in a few years' time they would be able to look back with pride on one of the finest pieces of constructive work to which the Association had ever put its hand.

Dr E. K. LE FLEMING said that in his area practically every member was an insurance practitioner. There was a voluntary levy which provided more than was actually needed for administrative purposes, and they had a standing resolution that at least £50 out of the surplus should go to the Charities Fund. Last year doubtless that amount was sent, and this year it was likely that the £50 would be largely exceeded. There must be many Panel Committees which, having fulfilled their obligation to the Defence Fund, were considering a reduction of their voluntary levy. The voluntary levy was felt by no individual, and he begged them to consider whether, having fulfilled their obligations in the one direction, they could not turn their attention to building up the Benevolent Fund to a similar figure.

Dr C. E. DOUGLAS begged the members to bear in mind that there was a vast body of suffering and distress amongst the profession, and that every man, according to his means, was called upon to help in its alleviation.

The report was approved including a proposed reconstitution of the Charities Committee whereby four

SCOTLAND  
(C)

Dr. HUGH MILLER (Chairman of the Scottish Committee) moved the approval of the report under "Scotland." He said that the main business with which the committee had been concerned during the year had been the scale of salaries in the public health service in Scotland, and on this matter they owed much to the skilful guidance of the Chairman of Council. Now that the Association had a house in Edinburgh it was proposed to develop the social side rather more, especially as it was hoped that the house would be suitably enlarged. It was hoped, in particular, to have reading-room facilities and so on, so that members visiting Scotland might find a suitable place in which to meet their fellows.

[The Chairman of Council, at an earlier meeting, when the general body was absent, had made a statement to the effect that the management of the Royal Epse- become ex officio members of the

The CHAIRMAN of COURSE, at an earlier stage in the meeting, when the general body of press reporters were absent, had made a statement on the position with regard to the scale of salaries in Scotland. He pointed out the difficulties of the position in Scotland, and said that in order to pave the way to a final settlement there were certain concessions which it seemed desirable to make. The principal of these was in the case of medical officers employed in departments. Here the figure in the scale as originally fixed for the whole country was not less than £600 per annum, though a year of probation at £500 per annum was allowed. Scotland had put forward a proposition that the commencing salary should be lower, but that there should be a graded rise so that the average over a certain number of years would not be less than £600. Certain modifications had also been agreed to with regard to the scale of commencing salaries for chief medical officers of health. The figures recommended in the case of Scotland were for populations not exceeding 50,000, £800 to £900, not exceeding 100,000, £900 to £1,100, not exceeding 250,000, £1,100 to £1,400, over 250,000, £1,400 to £1,600. These and certain other modifications in respect to other classes were recommended for twelve months, and in the meantime the Society of Medical Officers of Health would be asked to co-operate with the British Medical Association in running at some general arrangement which might suffice for both England and Scotland. He asked for informal assent from the meeting for the course taken. The assent was given without discussion.]

## WALES

W A L E S

Sir EWIN MACLEAN, in the absence of Dr W E Thomas, the Chairman of the Welsh Committee moved, on behalf of the Council, that the Annual Report of Council under "Wales" be approved. He said that he knew from personal experience that the Council Practice Subcommittee of the Welsh Committee had had many strenuous and anxious times and had had very important work to do. Its methods of managing the various phases of the work had excited a certain amount of favourable report and much had that been the ease that it had had visits and correspondence from representatives of other parts of the country who wished to inquire into its work and copy it. Perhaps there was no part of the country in which the defensive machinery of the Association had proved so valuable as the part in which the subcommittee was working. That applied more particularly to South Wales. The subcommittee had, he thought, earned the respect of its opponents. Medical men in Wales were profoundly grateful for the help they had received from headquarters and for the guidance they had had from their friend Dr Cox in all their cases.

I R E L A N D

Dr J MILES (Chairman)

IRELAND

Dr J MILES (Chairman of the Irish Committee) moved that the Annual Report of Council under "Ireland" be approved. In doing so, he said that the Irish Committee was at a disadvantage at present owing to the illness of

[SUPPLEMENT TO THE  
BRITISH MEDICAL JOURNAL]

Dr Darling one of its most effective members. Dr Darling had worked very hard, not only for his own local committee, but for the interests of the Association as a whole. The state of affairs in Ireland was very satisfactory at the present time. The Branches were all alive and vigorous. The membership was maintained. The recruitment was perhaps very much more satisfactory than the membership, for a great many of the recruits drifted away to less happy and less favoured lands. During the past year the profession in Ireland had had the advantage of the improving and energizing presence of Dr Cox. He arrived at the northern end of the country, and traversed it "welcomed by laurels as he went along." He thought that it would be difficult for Dr Cox to say whether his reception was more satisfactory at the northern or the southern end of the country. At any rate, they all agreed that they were very fortunate indeed in securing his visit, and they vied with each other as to who would give him the most hearty welcome. They would be very glad to see him at any future time. (Applause)

CONCLUDING

The CHURCH

CONCLUDING BUSINESS

**CONCLUDING BUSINESS**

The CHAIRMAN OF COUNCIL moved, and it was agreed, that subject to the amendments and other resolutions, the Annual and Supplementary Reports of Council be approved.

The MEDICAL SECRETARY announced that Mr. Lyndon, who had been elected representative of Council for the year 1905-1906, had been elected.

The Medical Secretary announced that in place of Dr Lyndon, who had been elected Deputy Chairman of the Representative Body and also one of the twelve members of Council elected by grouped representatives, Dr E. I. Stirling of Cambridge Wells had been elected a group representative, Dr Lyndon becoming *ex officio* a member of Council.

The Chairman moved  
That the best thanks  
given to the

That the best thanks of the Representative Meeting be  
given to the following ladies and gentlemen who have con-  
tributed to the comfort, pleasure, and convenience of the  
Representative Body  
The President, Sir Robert Phyllips  
The local General Secretaries  
Mr Alexander

The President, Sir Robert Philip  
The local General Secretary, Dr Fergus Hewitt  
Mr Alexander Miles, Treasurer of the Meeting  
The Principal of the University Dr Logan Turner, Mr  
J J M Shan, Dr W A Alexander (in connection  
with meeting room facilities)  
The President and Secretary of the University Union  
Professor G M Robertson, Dr George Gibson, and Dr D  
Gunn (Excursions)  
The Deputy Chairman of the Local  
Committee, Mrs. G. B. Brimwell

Members would notice that he said "Deputy Chairman of the Ladies' Committee" As they had heard sympathetic ally, Lady Philip, who was the Chairman of the Committee, had, unfortunately, not been well enough to take the part which she would have wished to take

The motion was carried by acclamation

The CHAIRMAN also moved a resolution

of the Head Office and

an

The motion was carried by acclamation  
The Chairman also moved a vote of thanks to the staff  
of the Head Office and the Scottish Office for the work done  
in connexion with the Edinburgh Meeting, and this was  
also carried with acclamation  
Dr BRICKENBURY then invested  
Hewthorne, with the help of the  
of the Board.

Dr BRACKENBURY then invested his successor, Dr C D HURTHORNE, with the badge of office worn by the Chairman of the Representative Body.

Dr J A MacDONALD seconded the motion.

Dr J A Mendenhall seconded the vote of thanks as the second man to hold the office which Dr Brickenbury had just vacated. Dr Brickenbury had well sustained the dignity of the Chair of the Representative Meeting. The motion was carried by the representative and applauding Dr Brickenbury.

Dr. BRICKBURN said that he greatly appreciated their kindness and indulgence to him, and if he could in any small degree repay it by any services he might render in the future it would always be his happiness to do so.

The Annual Representative of

The Annual Representative Meeting concluded at 3 p.m.

## THE ANNUAL DINNER

THE Annual Dinner of the British Medical Association took place in Edinburgh on July 21st when more than three hundred members and guests assembled. Scottish custom and hospitality introduced several distinctive features, such as the placing in of the principal guests to the sound of the bagpipes and the ceremonial appearance of the haggis. The menu card was a delightful production, bearing on the cover a sketch of Holyrood. The officers of the Association and the chief guests were seated at round tables, where the President (Sir Robert Philip) acted as host. Among the guests were the following: The Lord Provost of Edinburgh, the Sheriff of Edinburgh and the Lothians, Principal Sir Alfred Craig, the Presidents of the Royal Colleges of Physicians and Surgeons of Edinburgh (Professor George M. Robertson and Mr. Logan Turner), Earl Russell Lord Sinds, Professor Flaver and several of the other medical men from abroad attending the meeting, three past Presidents of the Association (Dr. T. G. Thomson, Sir David Drummond, and Sir James Britton), Lord Dawson of Penn, Sir George Newman, Sir Norman Waller, Sir Leslie Mackenzie, Sir Humphry Rolleston, the Right Rev. Bishop Graham, the Very Rev. C. L. Warr, Professor Osler, Sir George Barry, M.P., Dr. Drummond Shiel, M.P. and other representatives of political and academic life. The toast of 'The King' was heartily pledged.

## "THE IMPERIAL FORCE"

Lord Dawson of Penn proposed 'The Imperial Force'. From the very earliest times, he said, war and medicine had had a close association but never closer than in the ordeal through which the nations had but lately passed. The system of co-operation with the civil profession which that emergency brought about should not be allowed to drop for in any future war, if unhappily such came about, the forces of the Crown would be not less but more dependent upon the assistance of civilians. Should the need arise again, the response to the summons on the part of all callings and all classes would be as eager as it was in 1914. He associated the toast with a distinguished member of the senior Service, Rear Admiral H. C. Bowring, Commanding Officer Coast of Scotland, and spoke in fitting terms of his part in that great adventure, the Dover Patrol, which was one of the triumphs of the war.

Admiral Bowring, in the course of his reply, paid tribute to the enormous advances which had been made in the Services through medical science. He had been looking up the medical statistics for two or three years in the Royal Navy, and he found that the average number of men sick during the last three years had been only 8 per 1,000. He could remember the heavy toll which Mediterranean fever exacted, and the large number of deaths as well as the vast amount of ineffectiveness which resulted. But last year or thereabouts there was one death only from that cause. This was very largely due to improvements in hygiene and methods of prophylaxis, and now in the Services the men

started healthy and were kept healthy. He would not say that this was all due to the medical profession, some of it was due to the education of the men themselves, but the improvement was most remarkable.

## "THE CITY OF EDINBURGH"

Professor Tuffier, K.B.E., of Paris, proposed the toast of 'The City of Edinburgh'. Speaking in French, he said that it was with pleasure he rose, as a foreign visitor, to ask the company to honour the toast of one of the fairest of cities. He was the more glad to do this because of the age-long association between Scotland and his own country, and in particular the association between the Universities of Paris and of Edinburgh. Edinburgh was famed far and wide for the splendour of her buildings and the beauty of her situation, also for the history and legend with which the older portions of the city were saturated. But Edinburgh

had modern as well as ancient glories, in particular her continuing and increasing greatness as a University, and, especially to be mentioned in that company, the greatness of the names which adorned her medical school. Of those names that of Lister was the most prominent, and it had been his special happiness during that meeting to have taken part in the Later Commemoration in view of his own recollection of Lister himself in Paris on the occasion of the Pasteur jubilee. Professor Tuffier also expressed his sense of the honour done to him in the conferment on the previous day of the Degree or Doctor of Laws by Edinburgh University. He wished all prosperity to the city and University of Edinburgh.

The Lord Provost (the Right Hon. Alexander Stevenson), in his response, spoke of the long and close connexion between the city of Edinburgh and the art of healing. The Edinburgh Council records of the fifteenth and sixteenth centuries contained instances of many licences granted in favour of surgeon-apothecaries to practise within the gates of Edinburgh. But they had travelled far since then, and now they were holding in Edinburgh what he believed was the largest Annual Meeting of the British Medical Association. The present conference was more than a gathering of professional colleagues; it was an occasion of meeting of physicians and surgeons from all parts of the world. The Scottish capital had always prided itself on its medical school and as representing the corporation, he would wish to pay his respect to the memory of those men who had created and maintained the reputation now world-wide of Edinburgh for medical training. He then spoke of what had been accomplished in respect to the public health of Edinburgh. Twenty-five years ago when he entered the town council the death rate for the city was 17.7 per 1,000; now it was 13.5 per 1,000. In 1901 out of every 1,000 children born in Edinburgh 145 died in the first year of life; last year the number was 80 per 1,000. He was glad that the proposer of this toast should be a representative of French learning in view of the alliance made 600 years ago between France and Scotland—in alliance which had left its influence on the peoples

[Photograph by]

SIR ROBERT W. PHILIP

[Lafayette Ltd]

and the policies of those two great nations. It was not for him to say why Edinburgh cast such a spell upon its thousands of visitors, but probably it was because for many centuries the history of Edinburgh was in brief the history of Scotland.

#### "THE BRITISH MEDICAL ASSOCIATION"

LORD SANDS proposed the toast of the British Medical Association, coupled with the name of Sir Robert Bolam. He said that a rather obvious theme for him would be the glories of the medical school of Edinburgh, but he recalled the remark of an old Scottish judge to a counsel who was repeatedly making the same statement, "Mr A—, if you say that again I shall forget it." Moreover, a large number of those attending the meeting must be Edinburgh graduates before whom there was no need to praise their *Alma Mater*. He had once himself visited the island of Cos in the Aegean. One of the party was a Liverpool doctor distinguished alike in medicine and in archaeology, Dr. Caton, who explained to them the origin of the medical school there. It appeared that on Cos a base hospital was established during the siege of Troy, and as a medical school it continued to flourish, and became one of the most favoured visiting places of the "Hellenic Medical Association" in the palmiest days of Greece. Lord Sands's own recollection of the medical school of Edinburgh went back further than the recollection of most of those present, for he could recall the time when Lister was still a living presence and Simpson a very near memory. The British Medical Association, he said in conclusion, discharged many useful functions, but the greatest function it discharged was to preserve the traditions of the profession. Those in the medical profession were surrounded by an unpeeling tradition which had for them the force of law. He knew that medical men in these days were somewhat anxious about their position in respect to the certification of the insane, but he was quite sure that no medical man, when he had acted according to his traditions and had certified a patient as suffering from insane delusions, need be afraid, if necessary, to face a British jury. The profession was hedged about by a standard of honour and conduct and *esprit de corps* which was a most valuable protection. The profession had a great reputation for unselfish humanity. There was in history the name of one physician more familiar than the name of Hippocrates, or Galen, or Harvey, or Jenner, or Simpson, or Lister. Nothing was known of his medical qualifications, but of his unselfish humanity every reader of the New Testament was aware. When the Apostle Paul was in Rome, afflicted with incurable maladies, desolate, forsaken, he wrote an epistle in which were the words, shining with letters of gold, "Only Luke is with me." In those five words were enshrined the noblest traditions of the medical profession.

SIR ROBERT BOLAM, in responding to the toast, after thanking Lord Sands for his tribute, said that gathering in Edinburgh was larger than at any Annual Meeting the Association had ever known in its ninety-five years of history. There were 25 per cent more medical men attending the meeting than any previous one, and about 10 per cent of the active profession in these islands were gathered in Edinburgh during that week. Visitors had come from all parts of the kingdom, as well as from the Continent and overseas. No more representative medical meeting had been held in this country. His response to that toast that evening was his last official act as Chairman of Council, an office which he had held for seven years. He had remarked to the Lord Provost during the dinner that after that night he would be as a man with no occupation, and the Lord Provost had replied, "Make no mistake, you will only find another one." He was emboldened by those words to say to them all that, in whatever capacity any of them might serve the Association they all loved, their watchword might well be, when they reached such a point as he had reached at that moment, "Seek ye something more yet to do to serve the members of your profession." For the success of a meeting such as the present they were greatly indebted to the beauty and historic surroundings of the city in which they were met, also to the University and the several Colleges. As the years passed the Association went from one town

or city to another. Next year they would go to Cardiff, in the year following to Manchester, and in 1930 they would answer the insistent call of brotherhood from the Dominions and visit their friends in Canada. In 1932 the centenary of the Association would be held, possibly in London, or, it might be, in the birthplace of the Association, Worcester—the matter rested with those in executive authority at the time. He was sure that the work of the Association would prosper in the coming years as it had done in the past, and that its officers and members would continue to serve and maintain the honour and interests of the profession.

#### "THE PRESIDENT"

DR H. S. BIRKETT, of the Canadian Medical Association, in the room of the President of that body, Dr F. N. G. Starr, proposed the last toast, that of "The President." The name of Sir Robert Philip, he said, was known far beyond the confines of the city of Edinburgh. That night they thanked him for what he had done for this meeting in particular. It had been the speaker's privilege to have attended no fewer than twenty meetings of the British Medical Association, and he could say in all sincerity that he had never attended any meeting, either in Great Britain or overseas, which had been so successful as the present one in Edinburgh. He felt at that moment just as much at home as he did in Montreal. The hospitality which had originated from the President had been most wonderful, and he could speak at least for the visitors from the Dominions when he said that they were very grateful. There was a link between the far-off Dominion of Canada, particularly Montreal, and Edinburgh, because the University of Montreal was founded by four Edinburgh graduates. It was with the greatest pleasure that the profession in Canada looked forward to the meeting, three years hence, of the Association in the Dominion, and he extended to all who had come to Edinburgh, as well as to all the members of the Association, a most cordial welcome.

The toast of the President was pledged with much heartiness.

SIR ROBERT PHILIP, in replying, said how greatly touched he was by the kind words of Dr Birkett. The present gathering, as Sir Robert Bolam had said, was a very representative one, and there were many men gathered for that Annual Meeting whose names were household words in this country. It was representative of a huge number of overseas delegates, some of whom were his own very dear friends. It was representative also of a number of kindred associations—the Canadian Medical Association and the American Medical Association were represented. It was also representative of the rank and file of the British Medical Association, of which he was very proud at this moment to be the official head. Their presence at that meeting was an indication of their loyalty and love for the Association. He specially desired to recall the names of some leading workers on behalf of the Association who, in their several ways, had done much to ensure the success of the Edinburgh meeting, notably Sir Robert Bolam, Dr Blackenbury, Mr Bishop Harman, Dr Hawthorne, and, among the permanent officers one very dear friend of his own whom he wished could have been present on that occasion, Sir Dawson Williams. He was also much indebted to Dr Cox and Mr Ferris Scott. If this meeting had been a success—and he said it with all humility—it had been with his entire concurrence. "Concurrence" was the right word because he himself had been only the titular head of a magnificent army of co-operators. First on the list of helpers he should place the authorities of Edinburgh, represented on the civic side by the Lord Provost, and on the academic side by the Vice-Chancellor, Sir Alfred Ewing, also the Royal Colleges of Physicians and Surgeons, represented respectively by Professor Robertson and Mr Logan Turner. A big gathering like this did not go automatically. All concerned had had a delightful time in Edinburgh during the last eighteen months looking forward to this visit. Days and nights of laborious preparation had been necessary, and the utmost harmony had prevailed throughout. He desired specially to thank two or three individuals, if he might mention their names without seeming to depreciate so many other

willing helpers. The first was the Honorary Treasurer, Mr Alexander Miles, a man very much looked up to in Scotland. The second was a man whom every visitor had got to know during the week—Dr Fergus Howat, the Honorary Secretary—a man of most ubiquitous habits, whose hand had been felt in every part of the organization. Much was due also to the Ladies' Committee. Practically all the women doctors and the wives of medical men in Edinburgh had co-operated, and they were specially grateful to Miss Edwina Bramwell, Mrs Gulland, and Mrs Arthur Sinclair, the Deputy Chairmen of that Committee. His one regret was that one who would have dearly loved to be present and had been his companion for forty years had been unable, through illness, to take her part. He asked those present to accept Lady Philip's excuses and his own thanks.

During the dinner it was announced that the Ulster golf cup had been won by Dr J. A. Cromie and the Childs cup by Dr R. R. Duncan.

The proceedings concluded with the toast "*Florat res medica*."

### GRADUATION CEREMONY AT EDINBURGH

In connection with the Annual Meeting of the British Medical Association in Edinburgh the University of Edinburgh held a special graduation ceremony in the McEwan Hall on July 20th when the honorary degree of Doctor of Laws was conferred upon twenty-two distinguished medical men, of whom thirteen are British, six Continental and three American.

The EARL OF BALFOUR, Chancellor of the University presided and conferred the degrees. Others on the platform were the Lord Provost of Edinburgh (the Right Hon. Alexander Stevenson), the Vice-Chancellor of the University (Sir Alfred Ewing), the President of the British Medical Association (Sir Robert Philip), and Sir Robert Bohn, Dr C. O. Hawthorne, and many other representatives of the British Medical Association as well as members and past members of the Senate and members of the University Court.

The Dean of the Faculty of Divinity (The Very Rev. Professor W. P. Paterson) opened the proceedings with prayer.

Professor JAMES MACINTOSH, B.C., Dean of the Faculty of Law in presenting the honorary graduate to the Chancellor referred to them as follows:

#### VITTORIO ASCOLI M.D.

Professor of Clinical Medicine University of Rome.

Dr Vittorio Ascoli, an *alumnus* of the University of Rome on whose worthy shoulders has fallen the mantle of his great master Baccelli, was first Professor of Pathology and of Clinical Medicine at Pavia and now for ten years he has adorned the Chair of Clinical Medicine at Rome. For four years he has been President of the Royal Academy of Medicine at Rome. Interesting himself in many departments of medical science and administration he is recognized throughout Italy as the finest type of citizen. Recently he has been appointed Director of the new School of Malariology established by his Excellency Benito Mussolini. Among his many important contributions to medicine special mention should be made of his classic treatise on malaria. Professor Ascoli possesses in conspicuous measure the spirit of international fellowship and is full with pride that Edinburgh toges this fresh link with the famous Italian school.

#### HARVEY CUSHING M.D.

Professor of Surgery Harvard University

Dr Harvey Cushing, Professor of Surgery in the University of Harvard and Surgeon in Chief to the Peter Bent Brigham Hospital has devoted himself to the urgency of the brain and nervous system. He has overcome the baffling difficulties which the worker in this field encounters by a combination of the highest technical skill with a profound knowledge of physiology and pathology. Disciples from medical schools all over the world flock to sit at his feet. Nor can we forget that he is a collector of rare medical books who unrolls from the records of the past the origins of education, which have subsequently ripened with the development of knowledge. By his invaluable contribution to the history of contemporary medicine in his *Bibliography of Sir William Osler* if it stood alone, Professor Cushing has amply earned Apollo's bay

#### CHARLES L. DANA M.D. LL.D.

Professor of Nervous Diseases Cornell University

Professor Dana is a neurologist of international celebrity highly esteemed for his authoritative treatise upon nervous diseases which has passed through many editions and for many valuable scientific papers. He has also enriched the annals of medicine by a charming book entitled *Peaks of Medical History* which inspires the hope that he will one day use the materials he has collected to tell the story of the old Scots worthies who made the name of Edinburgh as a medical centre. Dr Dana is the 11th in succession of a brilliant galaxy of talent to hold the Huxtings Jackson Lectureship—the blue ribbon of British neurology. We gladly add our laurel to the many bouquets of which Professor Dana has been the recipient.

#### LORD DAWSON OF PENN G.C.I.O. K.C.B.

Physician in Ordinary to His Majesty the King

The pre-eminent position which Lord Dawson won for himself as a physician and the great reputation he gained as a teacher of clinical medicine at London Hospital have brought him many well-merited honours and have led to his appointment as Physician in Ordinary to the King. Fought through the war he gave invaluable help in the military hospitals in France and he is now the only doctor in the House of Lords where he has done admirable work in educating opinion with regard to the proper place and influence of medicine in public life. He should be a specially helpful adviser at the moment when the House itself is threatened with a rather serious operation of some sort for he has written with unique authority on the effects of high blood pressure and on disorders of the digestive system. The University gladly awards its laurel to a doubtless a champion of the medical art.

#### ARCHIBALD DONALD M.D. CH.M. F.R.C.P.

Emeritus Professor of Clinical Obstetrics and Gynaecology University of Manchester

After graduating in Edinburgh Professor Donald went to Manchester where he specialized in obstetric and gynaecology and has held all the important clinical and teaching appointments in connexion with the specialties and is now Professor Emeritus in the department in the University. At a time when gynaecological surgery was undergoing its most rapid expansion he was in the vanguard of the movement. A bold and skilful operator original in his ideas and quick to recognize and adopt any new and sound suggestion he has done more than any one man to raise the Manchester School of Gynaecology to its present eminence. Edinburgh is proud to recognize the sterling value of the work which this *alumnus* of hers has done.

#### CHARLES EDWARD DOUGLAS M.D.

Cupar

This year Dr Douglas celebrates the jubilee of his graduation in Edinburgh and also of his entry on general practice and we congratulate him on an honourable record which has maintained the highest tradition of professional life. His medical colleagues in the kingdom of Fife owe him a debt of gratitude for his influential support of the work of the Fife Medical Association and he has won the respect and goodwill of the community at large by his unflinching exertions in the cause of public health and public welfare. Dr Douglas has filled his life with varied interests and experiences. At college he won the mile in later life he served in two wars the South African and the European though in the last he was far beyond military age and he has indulged his literary tastes to some purpose, as his *Two Medical Humors* and other sketches prove. I present Dr Douglas as a typical example of the wonderful efficiency and intense loyalty of the great mass of general practitioners.

#### KNUD FABER M.D.

Professor of Clinical Medicine University of Copenhagen.

Dr Knud Faber, Doctor of Medicine of the University of Copenhagen and member of the Royal Swedish Academy of Science has been for over thirty years Professor of Clinical Medicine in his old University and Librarian in Chief to the University Hospital. For many years he has occupied an honoured place in the elaboration and administration of public health measures in Denmark. His original investigations on tetanus, anaemia, tuberculosis and diseases of the digestive tract have earned him fame to other lands. His *Yotograph*—a well illustrated account of the evolution of modern internal medicine—has enjoyed a wide popularity. Professor Faber's relations with British medicine have been intimate and sympathetic and in admitting him to the degree of Doctor of Laws Edinburgh University welcomes not only a fellow worker but a friend.

#### SIR WILLIAM HALE-WHITE K.B.E. M.D. F.R.C.P.

Physician to Guy's Hospital.

Sir William Hale-White was a brilliant pupil of Guy's Hospital and has since served on its staff as full physician for thirty-one years. As befits the son of Mark Rutherford his work has been

## Graduation Ceremony at Edinburgh.

[SUPPLEMENT TO THE  
BRITISH MEDICAL JOURNAL]

Distinguished by the prominence given to the scientific and wider aspects of clinical medicine. In his Croonian Lectures he demonstrated convincingly the correlation between the physiology of normal temperature and the clinical departures from the normal, and in all his papers—notably those on exophthalmic goitre and ulcerative colitis—the scientific has been the dominant note. His exertions in founding the Association of Physicians and the *Quarterly Journal of Medicine* have enhanced the prestige of British Medicine, while his *Lives* of some of the great masters of the past constitute a valuable contribution to the history of medicine. The University rejoices to recognize Sir William's signal services to his profession.

JAN VAN DER HOEVE, M.D.,  
Professor of Ophthalmology University of Leyden

After studying medicine at Leyden and Berne, Dr van der Hoeve devoted himself to researches in the physiology of vision with such success that he was appointed to the Chair of Ophthalmology, first at Groningen and then at Leyden. The fruits of this great authority on the eye extends far beyond his own University and his own country as is shown by the many dignified offices to which he has been elected by learned societies in all parts of the world. He has done work of high scientific value in nearly every department of his subject and in the connected branches of medical science, and has introduced into practice several original methods of treatment. So great a benefactor of those stricken in their noblest sense is well worthy of the honour which we now bestow upon him.

ROBERT GEORGE HOGARTH, C.B.E., F.R.C.S.,  
President of the British Medical Association

Mr Hogarth has long held a very high place in the realm of surgery. A Scotsman, born in the Border country, he early displayed the ancestral tendency to raid the South by attaching himself to St Bartholomew's Hospital for his medical training. Thence he passed to Nottingham, where he quickly won recognition as a cultured and skilful surgeon. For many years he has served on the staff of the General Hospital, the Children's Hospital, and other medical institutions in the Nottingham area. His important contributions to surgical literature extend over a wide field. When the British Medical Association accepted the invitation to hold its annual meeting at Nottingham last year Mr Hogarth was unanimously invited to occupy the presidential chair. At the moment when he deems that responsible office distinguished services he has rendered in that as in other capacities.

WILLIAM HUNTER, C.B. M.D., F.R.C.P.,  
Consulting Physician to the Eastern Command and to Charing Cross Hospital London

Colonel William Hunter was the most distinguished student of his year, when he graduated here in 1883. He has devoted his life to preventive medicine and in particular to the investigation of diseases of the blood. In the search for the cause of pernicious anaemia he directed attention to the effects of pernicious infection. In the wide field of inquiry thus opened up he has made many fruitful contributions to medical knowledge, and has been the source of inspiration to many subsequent workers. The prevention of sepsis has been the triumph of modern surgery, and his researches on medical sepsis have won him a high place among the disciples of Lister. The University highly appreciates the excellent work he has done for Charing Cross Hospital and its medical school, and she recalls with pride the splendid campaign he conducted during the war against typhus and other scourges on many of the allied fronts.

## OTTO MEYERHOF

Kaiser Wilhelm Institute of Biology, Berlin  
Professor Otto Meyerhof, formerly of Kiel, now of the Kaiser-Wilhelm Institut für Biologie in Berlin is one of the most distinguished biological chemists of the present day. He has produced a remarkable series of papers on the chemical changes occurring within cells—especially those concerned with cell respiration—and on the influence of ferments in the production of these changes. Within recent years Professor Meyerhof has devoted his attention mainly to the chemical and thermal changes accompanying muscular contraction. For this work he was awarded the Nobel Prize for Medicine on the same occasion as our own distinguished countryman Professor A. V. Hill who had been working independently upon the same problem. The University gladly endorses the favourable verdict of the adjudicators.

THOMAS HUGH MILROY M.D.,  
Professor of Physiology, Queen's University, Belfast

Professor Thomas Hugh Milroy, a distinguished *alumnus* of this University, and formerly first assistant in the Department of

Physiology, has since 1903 occupied the Chair of Physiology in Queen's University, Belfast. Professor Milroy has directed his attention chiefly to the chemical aspects of his subject, and has produced valuable work in this connexion—lately more especially upon the chemical changes which occur in muscle as the result of its activity, a subject upon which he has undertaken to open a discussion at the present meeting of the Association. The success he has achieved reflects no little lustre upon the institution where he received his early training, and he is eminently one *laurea donandus*.

SIR BERKELEY GEORGE ANDREW MOYNIHAN, BART.,  
K.C.V.G.  
President of the Royal College of Surgeons of England

The estimation in which Sir Berkeley Moynihan is held may be inferred from the long list of high offices which he has occupied at different times. He has been Professor of Clinical Surgery in the University of Leeds, surgeon to Leeds General Infirmary, and is the present President of the Royal College of Surgeons in England. He is universally recognized as one of the foremost abdominal surgeons of to-day, a leader in the present campaign, an erudite contributor to surgical literature, and a standard bearer in modern aseptic surgery. During the war he acquitted himself in the Army Medical Service with the distinction that might be expected of the son of a holder of the Victoria Cross. Sir Berkeley to our highest degree we are honouring also the great sister College of which he is the titular head.

SIR JOHN HERBERT PARSONS, C.B.F., F.R.C.S.,  
Ophthalmic Surgeon, University College Hospital London

In all his varied activities, whether as ophthalmic surgeon to two London hospitals, adviser of Government departments, or consultant to the Forces, Sir John Parsons has shown a singularly broad and imaginative outlook. His valuable investigations into sight tests for the Board of Trade prepared the way for his wonderful book on colour vision. He has served on numerous Commissions—on factory lighting, glass workers' entreaties, strains in cinemas and similar problems—and has done much useful work in correlating ophthalmology with the modern developments of industry. It was a tribute to once to his professional eminence and his organizing capacity that he was appointed ophthalmic consultant for the home troops during the war. So great a master of optical theory and of its practical applications is eminently deserving of academic recognition.

SIR HUMPHRY DAVY ROLLESTON, BART., A.C.B., M.D.  
Regius Professor of Physic in the University of Cambridge

The Regius Professor at Cambridge holds a distinguished position in medicine in virtue of his brilliant attainments as a physician and the outstanding services he has rendered to the country as consulting physician to the Royal Navy during the war, as a member of the General Medical Council, and as President of the Royal College of Physicians of London. His lengthened experience in hospital and in private practice imparts a very high degree of authority to his numerous writings on medical subjects. Sir Humphry enjoys in the fullest measure the confidence of his medical colleagues, and his ready been the recipient of many academic honours. It is a sincere pleasure for the University of Edinburgh to add his name to her roll of honorary graduates.

GEORGE FREDERIC STILL, M.D., F.R.C.P.,  
Professor of Diseases of Children King's College, London

Dr Still is in the unique position of being the first and only Professor of Diseases of Children in this country just as he was a pioneer in confining his private practice to children only, surely one of the most sensible forms of specialization. He is already world famous for his investigations in this new department, notably those relating to coeliac disease, and he will go down to posterity as the eponymous hero of another ailment of childhood—Still's disease. An acute observer and a severe critic of his own work, he is more concerned about proof than publicity. We gladly place Dr Still's name on our roll of honour which already includes his lifelong friend, the late Dr John Thomson of Edinburgh an equally sympathetic and gifted worker in the same department.

WILLIAM SYDNEY THAYER M.D.,  
Professor Emeritus of Medicine Johns Hopkins University  
President Elect American Medical Association

Professor Thayer may be described as the doyen of clinical medicine in the United States. His distinguished scholarly career, begun at Harvard, culminated fittingly in his occupancy of the Chair of Medicine in the Johns Hopkins University, Baltimore, where successive groups of American graduates have been proud to call him master. Among his numerous original contributions to medical science I may signalize his researches on malarial fever, and diseases of the circulation. During the war he conducted a Red Cross mission to Russia and was subsequently appointed chief

consultant of medical services to the American Expeditionary Forces in France. Outside his own country he has received the homage of London, Dublin, Paris, and other places. Edinburgh gladly seizes the occasion of his present visit to add the illustrious physician to its roll of Doctors of Laws.

#### WILFRED TROTTER F.R.C.S.

Surgeon to University College Hospital

Mr Wilfred Trotter is known throughout the world as one of the most brilliant and erudite surgeons of the day distinguished alike for his skill as an operator and his insight as an investigator on the scientific frontier. He received his training in University College London and he has repaid the debt by long service as surgeon to its hospital and lecturer in its medical school. He holds an outstanding position in connection with the urgent of the brain, the throat, and the gut. Mr Trotter pays successful court to other divinities than Hygieia and his thoughtful and incisive book on *Herd Instincts in Peace and War* would alone entitle him to academic honour.

#### THEODORE MARTIN TUFFIER

Academy of Medicine Paris

Dr Theodore M. Tuffier has for long been known as one of the most distinguished of French surgeons. His clinic in Paris has long been a Mecca to which surgeons from all parts of the world resort. The many daring and original operations which he has carried out demonstrate in the most unmistakable fashion how very safe—how almost seductive—surgery has become in the hands of an expert with a perfected technique founded on the principles laid down by Lister. We are delighted to offer an illustrious representative of French surgical science the highest honour in our gift.

#### SIR ALMROTH EDWARD WRIGHT K.B.E. C.B. M.D. F.R.S.

Professor of Experimental Pathology, University of London

The name of Almroth Wright will always be identified in the history of medical science with applied immunity. Following the lines laid down by Pasteur he is the real initiator of present-day methods of prophylactic immunisation against typhoid and paratyphoid fevers, cholera, plague, and other bacterial infections. In the great war antityphoid vaccination was put to the test on a truly colossal scale with the most brilliant success. Millions of troops from all the combatant nations were vaccinated and typhoid fever, which in previous wars had often taken a heavier toll of life than shot and shell, was reduced to a negligible quantity. Sir Almroth has also adapted the bacterial vaccine to the treatment of infective diseases, turning the protection with a therapeutic agent conforming to the old adage—*arsula amilibus curantur*. The University's laurel is most worthily bestowed on so great a benefactor of mankind.

#### OTTO NAEGLI

Professor of Medicine, University of Zurich (Degree conferred *in absentia*)

The University is happy to pay her tribute to the distinguished abilities of Professor Naegeli while she expresses her sincere sympathy with him in the bereavement which has prevented his presence at to-day's ceremony. A Professor of Medicine and Director of the Medical Clinic at Zurich he has been for years one of the outstanding figures in pathology and medicine on the Continent. His skill in diagnosis and treatment has established his reputation as a practitioner and his valuable treatises on tuberculosis and diseases of the blood have given him a foremost position as a scientific exponent of medicine.

The ceremony concluded with the benediction, pronounced by the Dean of the Faculty of Divinity.

## Notes on the Edinburgh Meeting.

### EVENING ENTERTAINMENTS

Scott Monument.

THE weather, which had been delightful in Edinburgh during the Annual Representative Meeting, kept fine throughout Tuesday, July 19th—the opening day of the Annual Meeting proper. It is believed locally that the presence of the King and Queen at Holyrood had something to do with this happy circumstance. After Sir Robert Philip's presidential address in the Usher Hall on Tuesday evening an immense number of members and ladies proceeded to the McEwan Hall and the adjoining University buildings for a reception given by the President and members of the Local Executive Committee. Many of those present wore academic costume and provided amusement for a critical group of bare-legged children from

Cowgate seated in a row on the kerb opposite the main entrance. The guests were received by Sir Robert Philip in the McEwan Hall where an organ recital was given by Mr Ralph T. Landon, Mus. Bac., and the bard of the Queen's Own Cameron Highlanders gave a performance, ending appropriately with the "March of the Cameron Men." In the Music Classroom there were two excellent vocal recitals by Miss Catherine Mentiply and Mr Philip Malcolm, accompanied on the piano by Mr T. Paterson Lamb. In the main quadrangle the pipe band of the Second Scottish General Hospital played stirring air, and refreshments were served in the smaller quadrangle.

The principal event on the evening of Wednesday, July 20th, was a commemorative meeting in the McEwan Hall to celebrate the centenary of Lord Lister's birth. The Earl of Balfour, K.G., Chancellor of the University of Edinburgh, presided, and short addresses on Lister were

delivered by Sir William Watson Cherne, Professor Tuffier, Professor Harvey Cushing and Professor John Stewart. This the main part of the Lister centenary celebration in Edinburgh was attended by a very large audience, many of whom wore academic robes. A full account of the addresses will be found in the JOURNAL this week at page 185. On the same evening a concert of chamber music was performed at the Freemasons' Hall in George Street, and at a later hour members of the Association were entertained at the Royal College of Surgeons of Edinburgh where they were received by the President, Mr Logan Turner.

On Thursday evening as reported fully elsewhere in the SUPPLEMENT the Annual Dinner of the Association took place at the Music Hall in George Street. In the neighbouring Freemasons' Hall there was a concert of Hebridean music, and the Royal Scottish Academy courteously gave members of the Association a private view of its 101st annual exhibition at the familiar building with its classical façade near the middle of Princes Street. A very enjoyable function, held on the same evening, was the reception given by the President and members of the Edinburgh Branch of the British Medical Association. The guests were received at the Palais de Dance by Dr John Stevens and dancing went on from 10 p.m. till 2 a.m.

The last evening event of the Annual Meeting was a reception on Friday, July 22nd by the Lord Provost and magistrates of the city of Edinburgh in the Zoological Park, Corstorphine. The weather, after sulking for two days, had improved and this out-of-door function was very largely attended. Members of the Association and their friends were received by Lord Provost Stevenson and members of the town council wearing ceremonial robes. The Zoological Gardens looked charming in the evening light but what their regular inhabitants thought about it all is not yet known though the largest lion's lawn was perhaps significant. The newly opened aquarium, with its ingenious lighting devices, was a continual source of interest to the visitors. In front of the central buildings a programme of music was provided by the pipe band of the 475th Royal Scots and refreshments were served in marquees.

EXCURSIONS AND AFTERNOON  
ENTERTAINMENTS

SEVERAL pages of the SUPPLEMENT might well be given up to an account of the innumerable tours and conducted visits arranged by the local Excursions and Transport Committee. The whole-day excursion by the members of the Representative Body to the Scott country on Sunday, July 17th, was recorded in our last issue. Throughout the period of the Annual Meeting a great variety of interesting places were visited, and to some of them, such as Edinburgh Castle and Holyrood Palace, parties were taken almost every day.

We can only name here a few of the places of special interest to which parties went by charabanc, car, or train: Craigmillar Castle, Melrose Abbey, Abbotsford, Newbattle Abbey and Dalhousie Castle, Bothwick Castle, Roslin Chapel and Castle, Linlithgow Palace, and Dundas Castle (where a garden party was given by Lady Stewart Clark on July 21st). On three afternoons a large number of members and ladies went to Dunfermline as the guests of the Carnegie Trust, and inspected the Peebles Hydro. The Forth Bridge and the Island of Inchcolm, with its ancient monastery, proved a great attraction. The ladies accompanying representatives who went to Tantallon Castle on July 16th were entertained to tea at Gosford House by the Earl of Wemyss, and on July 20th the Marquis of Linlithgow gave a garden party at Hopetoun House, near South Queensferry and the Forth Bridge.

Other interesting excursions included those to the Port Edgry Naval Base, to the Fenton Barns Scientific Farm as the guests of Dr and Mrs Chalmers Watson, to the Lubert Institute for Defective Children, under the guidance of Dr A. D. Clarkson, to the Children's Village at Humble, to the Saughton Prison, and to the Borstal Institution at Polmont. Visits were paid also to a coal pit at Newtongrange, to the *Scottsman* offices and the printing works of R. and R. Clark, Ltd., to twoed mills and hosiery workshops, to McVittie and Price's biscuit factory, to Younger's, Usher's and McEwen's breweries, to Dobbin's rose gardens, to the North British Rubber Company's mills, to Ruthven's Geographical Institute, to the Edinburgh and Leith Flint Glass Works, to the Portobello Electricity Station, and the Granton Gas Works.

The University of Edinburgh, following upon the honorary graduation ceremony in the McEwen Hall, gave a reception to the members of the British Medical Association in the Old College in South Bridge Street on the afternoon of Wednesday, July 20th. The noted his received on the terrace of the quadrangle the investigation of the cause of pernicious the University, and Lady Ewing. Dr. As of insidious septic opportunity was given to visit the real knowledge and has a collection of portraits, manuscript, subsequent workers. The quatern medical interest was on triumph of modern surgery, its portraits by Raeburn and from the physician's point Room, where portraits by Sir John H. Lister. The University John H. Lister, and other of her alumnus has done for the members of the Association a medical school, and she recalls the Royal Scottish Museum, which was conducted during the war. During the afternoon the band of Highlanders played from a balcony.

On Thursday afternoon the Annual Meeting gave a Biology, Berlin the Botanic Gardens, Inverleith Hotel Kiel, now of the Kaiser noon there was a reception by present day. He has produced at its house in Melbourne Place chemical changes occurring of ladies, were taken every day with cell respiration—and Edinburgh, to Parliament Hall production of these changes the National and Signet Library of has devoted his attention museums, and to social and education accompanying muscular The last day of the Annual awarded the Nobel Prize for party of 100 went by special distinguished country Ladybank, whence they travelled on working independently Palace. After inspecting the city gladly endorses the Melville House, with its famous OY, M.D., other works of art. At St. Andrews University. Be first at lunch in the Grand Hotel by distinguished alumnus of this British Medical Association, and in the Department of Castle and Cathedral, and the for Chemical Research. Tea was

Director of the Institute and Mrs. Maitland Ramsay. After a most enjoyable and instructive day the party returned to Edinburgh by special train from St. Andrews.

## THE TEMPERANCE BREAKFAST

THE fifty-seventh annual breakfast of the National Temperance League with the British Medical Association was held in the University Union at Edinburgh on July 21st, when Sir Thomas Henderson acted as host. The chair was taken by Professor D. P. D. WILKIE, who remarked that the Temperance Breakfast gave an opportunity for dispassionate consideration of what was, after all, one of the greatest social problems of this country. The subject of temperance always aroused keen controversy. On the one hand, there was the intensely earnest total abstainer, who believed that alcohol in any shape or form was the root of all human ills, and on the other hand, a very strongly entrenched body of opposite opinion, part of which was prejudiced at the very outset by direct or indirect financial interest in the manufacture or distribution of alcoholic beverages. It was the great feature of the National Temperance League that it represented the educated and, he thought, unbiased opinion of those who took a really scientific interest in this question from the point of view of the health, happiness, and economic prosperity of the nation. As medical practitioners they were all aware of the deleterious bodily effects of intemperance, and knew how often in the case of critical illness or severe operation the whole outlook was darkened by the previous intemperate habits of the patient. Professor Wilkie mentioned his recent visit to America, where he found the prohibition experiment arousing deep interest. He had heard from many people gloomy reports about the breakdown in moral, the habits of intemperance among adolescents, and the awful physical consequences which the drinking of wood spirit and other impure forms of alcohol produced, he was surprised to find these effects apparent, at least to a visit to them. On the contrary, what struck him, BART, KCB, MD, University of Cambridge, prosperity on every hand, part of the prohibition legis- lation holds a distinguished position in the middle ages he has rendered to the country as a member of the General Medical Council and as President of the Royal College of Physicians of London. His lengthened experience in hospital and in private practice imparts a very high degree of authority to his numerous writings on medical subjects. Sir Humphry enjoys in the fullest measure the confidence of his medical colleagues, and has already been the recipient of many academic honours. It is a sincere pleasure for the University of Edinburgh to add his name to her roll of honorary graduates.

## GEORGE FREDERIC STILL, M.D. FRCP,

Professor of Diseases of Children, King's College London. Dr. Still is in the unique position of being the first and only Professor of Diseases of Children in this country just as he was a pioneer in confining his private practice to children only, surely one of the most sensible forms of specialization. He is already world famous for his investigations in this new department, notably those relating to coeliac disease, and he will go down to posterity as the eponymous hero of another ailment of childhood—Still's disease. An acute observer and a severe critic of his own work, he is more concerned about proof than publicity. We gladly place Dr. Still's name on our roll of honour which already includes his lifelong friend, the late Dr. John Thomson of Edinburgh, an equally sympathetic and gifted worker in the same department.

## WILLIAM SYDNEY THAYER, M.D.,

Professor Emeritus of Medicine, Johns Hopkins University. President Elect American Medical Association. Professor Thayer may be described as the doyen of clinical medicine in the United States. His distinguished scholarly career, begun at Harvard culminated fittingly in his occupancy of the Chair of Medicine in the Johns Hopkins University, Baltimore. Nine successive groups of American graduates have been proud to call him master. Among his numerous original contributions to medical science, I may single out his researches on malarial fevers and diseases of the circulation. During the war he conducted a Red Cross mission to Russia and was subsequently appointed cl

National Temperance League, at whose breakfasts he had been a regular attendant. He was glad that the League not only advocated temperance, but was temperate in advocacy. Forceful methods would not commend themselves to the profession, nor indeed to the British people, and he considered it too early to prophesy that British temper and genius would acquiesce cheerfully in the enforcement here of the position which now obtained among the conglomeration of peoples on the other side of the Atlantic.

### MEDICAL MISSIONARY BREAKFAST

Under the auspices of the Medical Prayer Union and the Edinburgh Medical Missionary Society a breakfast was held in Edinburgh, on July 22nd which was attended by about sixty persons. Dr R. A. FLEMING, the president of the Edinburgh Society, was in the chair and an address was given by Mr. CLAYTON GROSVENOR, F.R.C.S. (Ed.), late of the Hunan-Tsao Medical School Changsha, Central China. Mr. Grosvenor said that in China there existed all stages of evolution and progress, though a few districts remained untouched and continued entirely in their ancient ways. The reaction or the civil disturbances upon the hospital situation in China was very acute. There were districts along the coast where every hospital was closed, and where no foreigner was allowed to reside. The hospitals, like the churches, had in some cases been plundered by the Chinese with legends expressing hatred of the Christian religion. With those who saw their work thus tragically interrupted he was sure that those present felt deep sympathy. Nevertheless, the kingdom of God was not bricks and mortar, nor even hospitals and churches, but the spirit of Christ in the hearts of men and women, and that was imperishable. He begged the meeting to think of the position of Chinese Christians. They were more or less isolated in many districts, and they had to serve seven or eight hundred Christian hospitals or dispensaries in China. The Chinese Christians had declared that the medical and surgical work must be of a high standard, that the one-man hospital in China must, as soon as possible disappear, and that wherever the Christian Church had anything to do with providing medical facilities that provision must be of the best. The nationalist movement which was adopting, with certain limitations, Western knowledge and civilization, was in itself to be welcomed, but unfortunately, it was complicated by the appearance of a number of so-called 'unions' one of them, for example called the "Anti Christian Union" and another the "Big Sword Society." They could only hope that out of all this turmoil and bloodshed something better would emerge. Whatever Government went into power the help or medical missions would be needed. It was impossible of course, for a foreign agency to spread medical education among 400 millions of people. The first duty was to man efficiently the Christian medical schools. British missions had done comparatively little for medical education in China, though there were most honourable exceptions, the speaker named particularly Dr. Dugald Christie and Dr. Duncan Mann. Whatever was taken to China in the way of medical aid must be of the best, it was unchristian to go to the Chinese with something that was third rate. The hospital, further, must have Chinese committees which would take over the responsibility for administration. The Chinese Christian Church must be stimulated to help the medical missionary work. The new China would be one in which the standard of living would be greatly raised. It would also be a country with new restrictions on foreigners, but Mr. Grosvenor believed that communism of the Russian type would pass away, and that the Christian policy of patience, conciliation, and friendship would win through.

### THE IRISH GRADUATES' LUNCHEON

The summer meeting and luncheon of the Irish Medical Schools' and Graduates' Association formed, as usual, an unofficial part of the annual Meeting. It was held on Wednesday, July 20th, at Ferguson and Forrester's Restaurant in Princes Street, Edinburgh, with the President, Sir William de Courcy Wheeler, in the chair. The

large room was quite full, and many guests were present among those who entertained parties were Dr. J. A. Macdonald and Dr. E. A. Starling. Owing to the fullness of Wednesday's programme, which included the Edinburgh Lister Centenary celebrations, the speeches were brief. The toast of "The British Medical Association" was proposed in very warm terms by Sir James Barr, and Dr. H. B. Brackenbury, the newly elected Chairman of Council, in his cordial response, spoke of the help that the two friendly associations could and did give each other. Dr. A. Fergus Hewat, Honorary Local General Secretary of the Annual Meeting, who proposed prosperity to the Irish Graduates' Association, expressed Sir Robert Philip's regret at his absence from the gathering, and recalled his own happy memories of Dublin and the Rotunda Hospital. Another personal link between the two capitals was mentioned by the President in his reply, Sir William Wheeler having been married in Edinburgh. A most successful luncheon party ended with compliments to the Honorary Secretary of the Irish Graduates' Association, Dr. Falkland L. Carr.

### THE ANNUAL EXHIBITION

What Emerson said of Nature, that she is "always and never the same," applies to the Annual Exhibition of surgical instruments and appliances, drugs, foods, and other requisites for the medical profession, which is held in connexion with each Annual Meeting of the British Medical Association.

Year by year the same well known names are seen on the various stands, the same well thought-out display of apparatus and material, the same attractive legend. So that one is tempted to think that the description, laboriously compiled, or one year's exhibition will answer with a few retouchings for the next, and perhaps for several succeeding years.

But a closer examination spoils this lazy illusion. At almost every stand one can find some new thing, some fresh preparation which has been mentioned in the medical journals, some new surgical contrivance associated with a familiar name, some patent food which, it not new in itself, is new in its style of package or the way in which it is presented, some new convenience for the consulting room or the laboratory or the operating theatre or the hospital ward, on the bookstalls some fascinating new volumes, and at the stands advertising the merits of different spas posters more artistic and pleasing than ever. There are no revolutions, but there is constant refinement and fresh adaptation. This year also a number of Scottish firms exhibited whom one does not usually see at exhibitions in the south. The exhibition was well supported by local manufacturers of medical and surgical goods, and two of the Edinburgh firms exhibiting, as mentioned by the President in his speech at the opening reported last week (SUPPLEMENT, p. 51) were associated with Lister, one of them displayed a letter written by Lister about some work in which he and the firm were collaborating.

The Waverley Market Hall was a very interesting place during the five days for which the exhibition was open. The only disadvantage was that it was ten minutes' walk away from the University, where the sectional and other meetings were held, but the reception office and registration counters occupied the whole of one side of the exhibition building, so that all members had to go there once or oftener, and the main entrance was half-way down the steps which lead from Princes Street to the Waverley station, perhaps the most thronged spot in all Edinburgh. Although the stands numbered well over a hundred—about twenty more than last year at Nottingham—there was never any crowding even during the busiest hours, and there was ample accommodation for writing or rest. The scrutiny of visitors was rather more rigorous than usual, which was much to the satisfaction of the exhibitors. Admission was virtually restricted to members of the medical profession. Several of the exhibitors declared the exhibition to have been the best from the business point of view that they had ever experienced.

Our usual account of the outstanding objects of interest at the different stands will begin in an early issue.

# LUNACY AND MENTAL DISORDER.

## MEMORANDUM BY THE LUNACY COMMITTEE OF THE BRITISH MEDICAL ASSOCIATION ON THE REPORT OF THE ROYAL COMMISSION

*Lunacy and Mental Disorder.*

[SUPPLEMENT TO THE  
BRITISH MEDICAL JOURNAL]

### INTRODUCTORY

(Throughout the Memorandum the references given are to the page of the Report of the Royal Commission)

1 In many important respects the Report of the Royal Commission on Lunacy and Mental Disorder (as regards England and Wales) is in harmony with the principles advocated by the Association in the evidence which it tendered to the Commission and must therefore commend the assent and support of the Association

2 The Commission fully recognises the basic principles —

- (a) that the treatment of mental disorder should approximate as nearly to the treatment of physical ailments as is consistent with the special safeguards which are indispensable when the liberty of the subject is infringed, (R, p 157)
- (b) that certification should be the last resort and not a necessary preliminary to treatment and that the procedure for certification should be simplified made uniform for private and rate aided cases alike and dissociated from the Poor Law, (R p 157)
- (c) that adequate provision should be made for the treatment of voluntary boarders in public mental hospitals, registered hospitals, licensed houses, general hospitals, nursing homes or single case (R p 157)
- (d) that it is not fair to ask medical practitioners to perform their essential functions in connection with the Lunacy Act under the menace of litigation which, even if unsuccessful may spell financial or professional ruin, and that further protection should be given to medical men in the discharge of their professional duties in relation to insanity (R p 24)
- (e) that a considerable extension of after care work is urgently needed and that in this connection adequate collaboration between the medical staff of mental institutions and the general practitioners attending patients after discharge is an important factor (R p 164) and should be strengthened and provision made for continuity of direction and that sustained consideration of the problems of the lunacy service necessary for the proper evolution of policy the Board of Control (modified in certain respects) should be charged with the duty of supervising and directing the system subject to the general control of the Minister of Health (R, pp 150 and 176)

3 Comparison of these fundamental points with the principal objects favoured in the Memorandum of Evidence presented to the Royal Commission by the Association will show how great is the measure of agreement as to the object to be pursued. Detailed study of the text of the Report shows how close a consideration has been given to the proposals submitted by the Association even where the ultimate recommendations of the Commission do not embody those proposals. Unfortunately the methods advocated by the Commission do not in every case appear to be those best calculated to secure the object in view. For this reason there are certain questions on which the Committee is unable to recommend them for the approval of the Association

4 In this connection the Committee desires to draw the attention of the Association to two matters of prime importance in these respects the recommendations of the Royal Commission appear to be unsatisfactory from the point of view of the Association. They are —

- (1) The protection recommended for medical practitioners who sign certificates under the Lunacy Acts
- (2) the facilities recommended for treating patients suffering from mental disorder in a manner approximately equivalent to that adopted for other forms of illness

### PROTECTION OF THE PRACTITIONER

5 Recent cases in the Courts notably the Harnett case (see paras 54-63 below) and the later cases of Hume-Spry and de Freville, have served to direct attention to the liability of practitioners who have given certificates under the Lunacy Acts to the risk of legal action by a patient on discharge or recovery. Anxiety in this connection has become so acute that in the words of the Royal Commission practitioners 'are

\* The discussion of this memorandum in the Representative Body is reported at page 66

at present performing these duties with increasing hesitation and reluctance and the position revealed by the evidence leaves little room for doubt that unless some relief is found for the situation without delay a breakdown in the system is inevitable' (R, p 39) To meet this position the Representative Body proposed —

'That the provision of a certificate under the Lunacy Acts by a qualified medical practitioner should be an act having the legal status of testimony given by a witness in a court of law, and should not render the practitioner liable either to any civil action or to any criminal charge, except in so far as the certificate may be shown to contain statements of essential importance which are proved to be inaccurate and to have been made with a wilful and deliberate intention to deceive (A R M 1924 Min 51)

6 This proposal, which may for brevity be termed the concession of Witness Status was urged upon the Royal Commission by the Association and was the subject of long and full discussion on more than one occasion between the members of the Commission and the Association's witnesses. It was held by the Commission that the adoption of the proposal would entail the concession of the highest possible privilege involving complete immunity even for a medical practitioner who had given a certificate negligently or in bad faith. It was apparently on this ground among others that the Commission whilst it appeared to appreciate to the full the sense of insecurity at present prevailing in the profession and the need for removing this feeling in the interests of the proper working of the Acts was unable to endorse the proposal for the concession of Witness Status to the certifying practitioner

7 In addition to the insuperable objection to extending personal immunity to any practitioner who has actually been negligent in the discharge of his professional duties, it may be pointed out that the suggested Witness Status would involve an undesirable emphasis upon that aspect of the relationship between the certifying practitioner and his patient which is the main obstacle to the approximation of the treatment of mental disorders to that of physical ailments. To deny the practitioner's liability to his patient for the careful and deliberate exercise of his skill would be to emphasise the legal as opposed to the medical aspect of the relationship and thus to defeat one of the main objects of the Association

8 Moreover such a course must strengthen the tendency to transfer the duty of certification from the ordinary medical attendant of the patient to an expert appointed for the purpose a tendency not favoured by the Association (see para. 45 below)

9 Apart from these considerations, it is clear that it would be difficult to persuade Parliament to adopt the proposal rejected by the Commission after such full and sympathetic discussion

10 The recommendation of the Royal Commission in this connection reads as follows —

'In our view the provision of absolute privilege could not be defended, but we consider that the certifying doctor should not be exposed to an action in respect of anything done under the Act unless the plaintiff can first satisfy a judge in chambers that there is *prima facie* ground for an allegation of want of good faith or *malice* able care

We therefore suggest, in order to place it beyond doubt that the onus of proof shall be upon the plaintiff that Section 330 (1) of the Act should be amended so as to provide that the persons indicated therein shall not be liable to any civil or criminal proceedings 'unless such person has acted in bad faith or without reasonable care

Section 330 (2) should be amended so as to enact that proceedings shall upon summary application to the High Court or a Judge thereof be stayed upon such terms as to costs and otherwise as the Court or Judge may think fit unless the Court or Judge is satisfied that there is substantial ground for alleging that such act was done in bad faith or without reasonable care

11 To understand the effect of this recommendation it is necessary to recall the existing position under Section 330, Sub-sections (1) and (2) of the Act of 1890. Under the existing proceedings taken against any person for signing a certificate under the Act may be stayed if on application to the High Court the Court is satisfied that there is no reasonable ground for alleging want of good faith or *malice* able care. This means that to succeed in such an application the practitioner must prove to the Court not only that there was in fact no carelessness or want of good faith but also that nothing in the statement of claim even suggests the defects. The legislation recommended by the Association would provide that proceedings shall be stayed unless the Court is satisfied that there is substantial ground for alleging

that the certificate was given in bad faith or without reasonable care. In short while at present the onus of proof rests upon the doctor the new proposal would transfer it to the plaintiff. The change involved in such legislation was evidently considered by the legal members of the Commission to be material. The Committee is of opinion that while it would constitute a distinct advance on the present position it would not in itself be sufficient to secure the object in view.

12 Examination of the procedure involved in any action taken by a patient in connection with lunacy proceedings suggests, however, a means of increasing the efficacy of the change recommended by the Commission.

13 When the Court has before it an application to stay proceedings the evidence submitted by the plaintiff in support of his plea of negligence in general includes affidavits from expert witnesses. In the absence of any provision for the scrutiny of these affidavits by an authority competent to form a scientific estimate of the validity of the conclusions they set forth the mere production of such a statement of medical opinions must go far towards establishing a *prima facie* case of negligence, however slight its value may be from the professional point of view. It is clearly improper to seek to impose any check upon the right of the plaintiff to call such witnesses as he may think fit. But there can be no similar objection to providing that such evidence, which may possibly from the technical point of view be of no substance, should be subjected to impartial medical criticism at the hearing so that the Court may not be misled and the purpose of the legal protection be so frustrated.

14 With this end in view the Committee considers that as a corollary to the proposal of the Royal Commission the Association should press that when an application is made to the Courts by or on behalf of a person who has been certified alleging want of care or lack of good faith on the part of the medical practitioner who signed the certificate the Judge should have the assistance of a medical assessor in considering the case and the same principle should hold in the Court of Appeal.

15 If this can be secured it seems reasonable to hope that in future the protection which on principle both the Legislature and the Royal Commission deem right and necessary will be made effective instead of illusory as it has proved to be under the present mode of procedure and that such legal actions as it is on all hands sought to prevent from proceeding to trial will in fact be stayed at the outset.

16 Beyond this the Committee is of opinion that the recommendations of the Commission with regard to the part taken by the magistrate in proceedings under the Act are of value from this point of view. The main points in the Commission's recommendations under this head are as follows:—Whilst under the present practice the magistrate in a private case may or may not see the patient he shall in future be compelled to see the patient and also wherever possible the relatives or the patient and in any case of doubt one or other of the certifying practitioners (R p 38).

17 The Commission also recommends that for the proper discharge of the grave responsibilities devolving on the magistracy under the Lunacy Code there should be an effective selection of magistrates most suited to undertake these duties (R p 56). The Justice should be entitled to call for the assistance of the clerk to the Justices (R p 55) he should be required to exercise a directed discretion that he should be required to consider whether it is necessary to see the medical practitioner or practitioners, whether further investigation is necessary in regard to any delusions alleged in the certificates, and whether the patient should be informed of the allegations (R p 56) and a formal record of the proceedings should be made.

18 Whilst the Committee is anxious to eliminate the judicial authority from the machinery for the early treatment of mental disorder (see paras 30, 41 and 42 below) it considers that every possible step should be taken to ensure that his intervention once it is invoked is effective.

The Committee therefore is of opinion that the Association should press for the introduction into the form of any judicial detention order of words indicating that before signing the order the judicial authority has satisfied himself that the medical practitioner concerned has exercised reasonable care.

In any subsequent proceedings such a statement should establish a presumption in favour of the practitioner whose conduct may be impugned.

19 In connection with its recommendations for safeguarding the interests of the practitioner the Committee wishes to emphasise the necessity for the adoption by the practitioner of all due precautions in dealing with cases falling under the provisions of the Lunacy Acts. The practitioner should keep in mind not only the necessity for the

exercise of due care at every point in his treatment of the patient but also the possible need for demonstrating to a jury at a later date that such care has actually been taken. This point is discussed in detail in paras 61 and 62 below.

## EXTENSION OF FACILITIES FOR THE TREATMENT OF PATIENTS SUFFERING FROM MENTAL DISORDERS

20 The Royal Commission appears to have fully realised the necessity for dealing with mental disorder on a medical basis as essentially comparable to other forms of disease and to this end sets out to ensure that procedure shall be simplified and the hindrance to treatment involved in the general fear of the stigma of certification be removed so far as possible whether by the provision of alternative methods of procedure or by the dissociation of mental treatment from the machinery of the Poor Law.

21 The policy indicated above corresponds with that set out in the following statement of the main objects favoured by the Association—

(a) to meet as far as possible the susceptibilities of the public with a view to minimising the objections which prevent patients from accepting proper treatment at the earliest possible moment

(b) to avoid the need for a formal reception order for mental patients whose symptoms though acute are likely to be shortlived in the hope that the recovery of the patient may render such an order unnecessary.

22 Unfortunately when the Commission passes from its general statement of aim to the elaboration of machinery it seems to allow the necessity for the special safeguards requisite when the liberty of the subject is infringed to obscure the main object in view namely the provision of adequate facilities for the treatment of mental disorder on a purely medical basis.

23 The Association recommended in its original Memorandum of Evidence the extension of provision for the treatment of temporary boarders without judicial intervention (on the lines laid down in the Mental Treatment Bill of 1923) to suitable non-volitional cases and the institution of a provisional treatment order which would replace the existing urgency order and serve either to obviate full certification or as a preliminary step to the procedure necessary for a reception order in cases where full certification ultimately becomes necessary.

24 Under the recommendations of the Royal Commission it is only those who are definitely capable of volition that will obtain relief from the need for legal formalities directing detention. Those early and hopeful cases which cannot be said to be capable of volition fall under the procedure of the Royal Commission's provisional treatment order which as will be shown is hedged about with legal formalities and perpetuates some of the very defects and objectionable features of the existing system of certification that it was sought to eliminate. It is only in name that this order corresponds with the provisional order suggested by the Association and further there is nothing in the procedure proposed by the Royal Commission to correspond with the proposal under the heading 'Temporary Boarders' proposed by the Association to facilitate the treatment of this class of patient in harmony with the provisions of the Mental Treatment Bill. Hence the provisional treatment order of the Royal Commission is not only very different in substance from that proposed by the Association but what is even more important the class or cases of illness to which it would apply is a totally different one.

## PROVISIONAL TREATMENT ORDER PROPOSED BY THE ROYAL COMMISSION

25 As explained in paras 23 and 24 above the provisional treatment order proposed by the Royal Commission is entirely different from the provisional order suggested by the Association in its original Memorandum of Evidence. The similarity of phraseology however makes it particularly difficult to avoid confusion in discussing the effect of the recommendations of the Royal Commission and it is essential to remember that throughout the following paras the term 'Provisional Treatment Order' is applied exclusively to the Order suggested by the Royal Commission. The question of the adoption of a procedure similar to that recommended by the Association in its Memorandum of Evidence under the description of provisional order in substitution for the existing urgency order or the emergency provision recommended by the Royal Commission is a distinct issue which is not further discussed. The problem now to be considered is that of the best provision for the treatment of early cases of mental disorder without certification.

26 Under the provisional treatment order proposed by the Royal Commission the judicial authority has to be called in from the start at the end of one month he has again to be called in and must see the patient.

27 Further, the continuation of the treatment is only authorised for a period of five months after which the judicial authority has again to be invoked if further treatment is deemed necessary, and such treatment would be under a reception order after full certification.

28 Moreover, this provisional treatment order involves the retention of an additional method of procedure without any compensating advantage.

29 From the patient's point of view the only practical difference from the present procedure is that the legal aspect of the question will be still more emphasised than it is at present. He will be placed under detention under legal authority, with even more legal formality than under the present law, and the knowledge of his position is soon as he is able to appreciate the facts must have as prejudicial an effect upon the development of treatment and hope of recovery as has the present system of certification. Against all this the change of terminology effected by the order can hardly be considered of any appreciable value.

30 The procedure proposed permits of delay up to 7 days after receipt by the judicial authority of the documents. It seems likely that a procedure involving delays of this kind in the early and recoverable cases for which it is apparently intended would be useless and become a dead letter and the emergency procedure which allows of detention for 7 days prior to obtaining a provisional treatment order or reception order would again become the ordinary one.

31 From the point of view of the administration and medical treatment of the case the provisional treatment procedure is unduly complicated and if as seems inevitable, it becomes general in the first instance in place of the reception order the disabilities under which treatment is now carried out will be accentuated. The more complicated the administration the less time there is to devote to the essential needs of treatment and the larger the hospital the more serious is this aspect of the question.

32 From the point of view of public opinion detention under a provisional treatment order so overweighted with legal safeguards must inevitably carry the same stigma as the present system of certification.

33 In the opinion of the Committee, therefore, the specific recommendations of the Royal Commission in regard to the provisional treatment order would do nothing to make early treatment more accessible in non-volitional cases and would inevitably add greatly to the work and difficulties both of doctors and justices. If the provisional treatment order is to operate in such a way as to bring about the results desired both by the Royal Commission and the Association it is essential if the judicial authority is not eliminated altogether as far as provisional orders are concerned that he should at least be relegated to a far less prominent position and that his appearance should be less frequently recurrent than is proposed by the Commission. The Committee is still of opinion that provision should be made for some procedure on the lines of the Mental Treatment Bill for hopeful but non-volitional cases.

34 In this way the handling of the relatively transient and recoverable cases could be approximated more closely to the treatment of physical ailments an object sought alike by the Royal Commission and the Association.

35 In support of this suggestion it may be pointed out that the intervention of the judicial authority has in fact afforded but little protection to the patient, and if that intervention is so elaborated as to be effective there is the certain prospect of its deterring the friends of the patient from seeking treatment for him whilst increasing the obstacles when treatment is agreed to in the very cases where delay and difficulties of this kind are so great a disadvantage.

36 On the other hand the proposals of the Royal Commission for the enlargement and readjustment of the duties of the Board of Control make the protection of the liberty of the patient feasible and practicable by the supervision and inspection of the Board and such protection is likely to be more thorough and based on wider experience than any which could be exercised by an ordinary judicial authority. Indeed, in the opinion of the Committee the special safeguards necessary in the circumstances can best be secured through the medium of the Board of Control.

37 Again, the Royal Commission expressly recognises (R. p. 20) that when all is said and done reliance must inevitably be placed at some point on the skill and integrity of the medical man. If confidence is not reposed on the medical profession no system of protection can be devised which will not ultimately break down. The Committee is in complete accordance with these views.

38 In so far as the doctor's personal position is a matter of interest, it may fairly be said that his safety does not

appear to be increased by the proposals of the Commission with regard to the provisional treatment order, inasmuch as there is to be only one medical certificate. The doctor will certainly not be protected by styling his certificate a "recommendation." If on the other hand, the order were made by a relative or friend of the patient supported by two medical certificates, as suggested by the Association, the doctor would be much less exposed to attack and in attack would be more easily rebutted.

39 In view of the above considerations the expedient now recommended by the Committee is the simplification and formalisation of the procedure, to bring it into more harmony with that laid down in the Mental Treatment Bill of 1923. It should be possible in a non-volitional case in which an early recovery under treatment is hoped for to enable a "relative friend or public official" on the certificates of two medical practitioners to give the necessary authority for treatment and control for a period of six months, subject only to the knowledge and observation of the Board of Control.

40 An extension of the period of treatment for a further six months should be possible and for this a notification to the Board of Control in a statutory statement should be sufficient authority. Without such modifications it seems inevitable that the new powers sought by the Royal Commission for local authorities as regards the provision of clinics for out-patient and in-patient treatment of incipient cases, and the arrangements suggested for the treatment of cases falling within the scope of the provisional treatment order in general hospitals, nursing homes or under single care as well as in public mental hospitals registered hospitals licensed houses and other special accommodation must fail of the desired effect (R., pp. 141 and 159). With such modifications the procedure would hold out prospects of a real and essential reform in the treatment of mental disorders.

41 The Committee believes that the freedom for which it asks is both safe and practicable and will ensure that the early treatment of mental illness will become effective and is of opinion that the Association should press for the legislation necessary to secure this object.

#### PROCEDURE PROPOSED BY THE ROYAL COMMISSION IN CONNECTION WITH THE RECEPTION ORDER

42 The Committee invites attention to certain aspects of the recommendations with regard to the full certificate required for a reception order in respect of a person of unsound mind. The Royal Commission proposes that if the patient has not already been the subject of a provisional treatment order, this certificate should include a statement that he is not likely to recover within the period available under such an order (i.e. six months) (R., p. 159). This seems a particularly undesirable addition to the certificate. Doctors will be very unwilling to commit themselves to a forecast of this nature and the requirement would tend to discourage the use of this mode of certification at the start, even in suitable cases and would thus increase the administrative labours of all concerned to no useful end. It would seem better to leave the unfettered judgment of the medical practitioner to decide which method of placing under treatment is appropriate to the individual case.

43 Accordingly, the Committee recommends that, with reference to Recommendation VI (a) (R., p. 159) of the Royal Commission, the words "the patient is not likely to recover within the period available under a provisional treatment order" (i.e., six months) should not be included in the certificates required for a reception order.

44 The Commission recommends that in cases where full certification is necessary one of the medical certificates should preferably be given by the usual medical attendant, if any, of the patient or by a public certifying medical officer if such an official has been appointed in the area. If the proceedings are being taken in respect of a patient already under a provisional treatment order, the certificate should be given by two independent medical practitioners, except that one may be under the hand of the medical superintendent of a public mental hospital or other medical officer in the public service. The two medical men given the certificates should be entitled to consult together (R., p. 159).

45 The Committee desires to emphasise the fact that the Association did not, in its evidence support the suggestion that such medical certificates should be signed by specially selected and approved practitioners and cannot recommend any modification of the Association's attitude in this connection.

46 The Committee further draws attention to the fact that the reference to "two independent medical practitioners" does not make clear the meaning of the word "independent" whilst the reference to the superintendent of a public mental hospital or other medical officer in the

public service does not indicate whether the permission to certify accorded to a practitioner falling within the categories does or does not extend to the case of a patient already in his own charge.

47 The Committee welcomes the recommendation in favour of enabling the certifying practitioners to consult together.

48 The Commission suggests (R. p. 159) in connection with the procedure in the case of an involuntary patient who requires to be dealt with by reception order after full certification is a person of an unsound mind that the petition should be accompanied by a statement of particulars including a disclosure of the patient's property if any. The Committee assumes that this provision has reference to the requirement (R. p. 160) proposed by the Commission that the Board of Control should forthwith notify the Master in Lunacy if the patient has property exceeding £100. It seems to the Committee to be unfortunate to load the procedure with such matters as this and it is suggested that if such a statement is necessary on grounds of public policy it might be supplied at any time within seven days of the patient's certification.

#### POINTS OF DETAIL

49 In the opinion of the Committee the following points in the Report of the Royal Commission call for some further comment.

##### VOLUNTARY BOARDERS

50 While welcoming the main recommendations of the Royal Commission in connection with the extension of facilities for the reception of voluntary boarders, the Committee wishes to draw attention to certain points which seem to require explanation or modification.

51 The Commission states (R. p. 157) that written application should be made for treatment as a voluntary boarder but the authority to whom this application is to be made is nowhere specified. This is a matter of some importance.

52 The Commission recommends (R. p. 155) that in the voluntary boarder cases to have volition he should within one month be dealt with as an involuntary patient. The Committee wishes to emphasise in this connection the necessity for introducing into any legislation concerning voluntary boarders some special provision for dealing with those cases in which transfer from one institution to another would in the absence of such provision be bound to occur by reason of chargeability and would be detrimental to the patient.

##### BOARD OF CONTROL

53 The Committee regrets that the suggestions of the Royal Commission (R. p. 176) for the reconstruction of the Board of Control do not ensure the appointment of a medical woman on the Board of Commissioners, and that the scale of salaries proposed for Assistant Commissioners is not calculated to attract practitioners of sufficient standing to apply for the posts.

##### HARNETT v FISHER

54 The Committee has kept in mind throughout its deliberations the following resolution of the Representative Body 1926—

Minute 115—Resolved That the following motion be referred to the Council—

That the Council be requested to take all necessary steps as soon as possible to deal with the situation which has arisen as a result of the findings of the jury in the Harnett v Fisher case with a view to protecting the interests of the medical profession.

55 In this connection the Committee has not taken careful note of the points of interest emerging in the course of two actions of a later date than that of Harnett v Fisher, namely Hume-Spry v Smith and Another and De Freville v Dill. Unfortunately the final decision in the Harnett case was not delivered until May 27th a delay which has made it impossible for the Committee to deal adequately with these points. The judgment in the case of De Freville v Dill has been deferred to permit of legal argument and it seems desirable to defer consideration of the Hume-Spry case until it can be taken in connection with the other two.

56 Pending the opportunity to formulate a detailed report on the points arising out of the three cases mentioned above the Committee has directed its attention to finding some immediate method or increasing the admittedly inadequate safeguards at present available for the practitioner who is called upon to take any share in procedure under the Lunacy Acts. The conclusions and recommendations of the Committee in this connection are set out in paras. 10-20 above. In putting forward these recommendations the Committee has not lost sight of the probability that the adoption of the recommendations of the Royal Commission in regard to treatment more especially in the modifications suggested by the Association in paras. 55-58 above are incorporated in the suggested final

adopted will tend so to modify the general state of opinion with regard to the treatment of mental disorders as to minimise the risk of the actions.

57 In the course of deliberations the Committee has examined a suggestion that the decision given in 1921 in the case of Everett v Griffiths and Another is authority for the statement that a practitioner giving a certificate under the conditions laid down in Section 13 of the Lunacy Act 1890 is not liable to an action for negligence on the part of the patient so certified. The effect of the decision of the House of Lords in the case cited is as follows—

Where a chairman of a Board of Guardian under an authority given by the Lord Chancellor in pursuance of Section 25 of the Lunacy Act 1891 makes a reception order under Section 16 of the Lunacy Act 1890 against a person alleged to be a lunatic and a medical practitioner having been called in signs a certificate that the alleged lunatic is a person of unsound mind the chairman if he has actually satisfied himself acting honestly and bona fide in arriving at his conclusion and proceeding upon it is not liable on the ground of want of reasonable care to an action at the suit of the alleged lunatic for civil imprisonment and the medical practitioner is not liable to such an action if he has acted with reasonable care.

58 It will be seen that the medical certificate given in this case was obtained under Section 16 of the Act and not under Section 13. The procedure under Section 13 is however analogous to that under Section 16 in so far as both Sections provide for medical examination and certification on the order of a judicial authority. The case was actually decided however not on the ground that the medical practitioner concerned owed no duty of care to his patient but on the ground that he had not in fact been guilty of negligence. On the question of liability various conflicting views were expressed by the several judges. Such being the facts with regard to the decision the Committee was forced to reject the conclusion that it established any immunity from liability in the case of the certifying practitioner whether under Section 16 or under Section 13.

59 Beyond this the Committee is of opinion that the procedure defined in Section 13 which involves the subjection of the patient to treatment as a pauper is unsuitable in many cases in which a practitioner may be called upon to grant a certificate under the Lunacy Acts.

60 Consideration of the evidence given in the three important cases mentioned above suggests to the Committee the desirability of impressing upon members of the Association the necessity for the exercise of the utmost caution in any case where proceedings under the Lunacy Acts are or may become necessary. The practitioner should remember that in addition to taking all suitable precautions at the time of examination and certification he must provide that in the event of his conduct being impugned at a time when he will presumably have forgotten the details of the case he will still be in a position to satisfy a court as to the adequacy of the precautions taken. To this end it is essential that he should (1) distinguish carefully in the certificate between facts reported to him and facts he has himself observed (2) make careful notes of the nature of the examination made and the points which determined his diagnosis (3) preserve the notes indefinitely in view of the possibility of a long delayed action for negligence (4) consider carefully the possibility of interested action on the part of relatives or friends (5) accept or reject their statements deliberately and preserve some record of the fact that he has done so.

61 In the course of the actions under consideration an attempt has been made to base a case of negligence on one or all of the following grounds—

(a) The omission of a complete physical examination of the patient prior to certification.

(b) The omission to confront the patient whatever his condition at the time with any persons who may have made statements to the practitioner concerned as to the patient's aberrations of mind or conduct.

(c) The omission to delay certification in every case pending reference to an alienist.

(d) The omission to prosecute an exhaustive inquiry into the accuracy of all statements made by relatives.

62 The Committee cannot admit the contention that the procedure indicated above is an appropriate general preliminary to certification and desires emphatically to protest against the implications therein conveyed.

63 The Committee is of opinion that the adoption of the recommendations of the Royal Commission together with the additional safeguards set out in paras. 14 and 15 above would adequately protect the practitioner who has exercised due care in abstention from vexatious and ill-founded actions and may prove to be the best practicable policy.

## Naval and Military Appointments.

## ROYAL NAVAL MEDICAL SERVICE

Surgeon Commander W J Morris to the *Conquest*  
Surgeon Lieutenant Commander T N D Vroly to the *Castor* (Temporary)  
Surgeon Lieutenants J D Sayers to the *Beaufort* J C Currie to the  
*Cicada* J C Holmes to the *Lamia* for HM Hospital Ship *Yaine* on  
relief, L A I Wiles to the *Ilizroy* T Pruntice to the *Cockchafer*,  
C T Hyatt to the *Flinders* E C Downer to the *Cyclamen*  
Surgeon Lieutenant (Short Service) D M Berton transferred to  
Permanent List, with original seniority of August 13th, 1927  
Surgeon Lieutenant R B McVicker transferred to Permanent List, with  
original seniority, January 23rd 1925

## ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Lieutenants H Parry Price to the *Tiger* for fourteen days  
training W P Lifford to RN Hospital *Haslar*, for fourteen days  
training  
Probationary Surgeon Lieutenants R L Simbs and L C Rogers to  
RN Hospital *Haslar* for twenty eight and fourteen days training  
respectively  
Probationary Surgeon Lieutenants J A R Thomas to the *Victory* for  
twenty eight days and J O Clark to the *Carysforth*

## British Medical Association.

### PROCEEDINGS OF COUNCIL

Monday, July 13th

The final meeting of the 1926-27 Council of the Association was held in the Robing Room of the McEwan Hall, Edinburgh University, on Monday July 13th. Sir Robert Bolam presided, and the following members were present:

Mr R G Hogarth (President) Dr H B Brackenbury (Chairman of Representative Body) Mr A Bishop Harman (Treasurer) Dr C O Hawthorne (Deputy Chairman of Representative Body) Dr J Banroft Anderson Dr H S Blades Sir Alfred Blenkinsop Dr J W Bone Dr H C Brastow Dr H G Dain Dr C E Douglas Mr W McAdam Eccle Dr E P Fothergill Dr I J Gomez Dr R Wallace Henry Dr G B Hullman Dr J Hudon Dr I W John Dr J Langdon Down Dr David Law Dr E A Le Fleming Dr R W Leslie Dr R A Lester Dr J G McCutcheon Dr J A Macdonald Dr S Morton McKenzie Dr A Vaneveld Dr O Marriott Dr J C Pather Dr G W Miller DSO Dr Hugh Miller Dr J Mill Dr Christine Murrell Lieut Colonel F O'Keefe Dr W Pater Dr J Dods Price Dr F Padcliffe Mr H S Souttar Dr John Stevens Dr Lockhart Stephens Dr W E Thomas Dr G Clark Trotter Mr E B Turner Sir Jenner Verrall Dr J F Walser and Dr D Walshe

The Chairman said that it would be a great grief to his fellow members and to all who knew him to learn that Dr J S Darling was seriously ill. The Council requested its Chairman to send Dr Darling a message of sympathy and affection.

#### International Union of Medical Organizations

The Medical Secretary presented a report on the International Union of Medical Organizations—a body to which the British Medical Association had not given adhesion—and the comparative success it had met with during the first year of its existence. It had enlisted support from bodies of medical men in nearly twenty European and several South American countries. Dr Decourt, the secretary, had invited him to attend the next general meeting in September in Paris as an observer.

Mr Bishop Harman (Treasurer) hoped the Council would not retreat from the position it had taken up despite the warnings of Dr Decourt, a very energetic man who saw the importance of launching something which in medicine was very much the equivalent of the League of Nations. He thought that all information might be afforded to the organization but that the Association should not enter into covenants.

Dr Fothergill moved that Sir Robert Bolam and the Medical Secretary be asked to attend the general meeting as observers. He felt that good work might be done by getting into touch with the representatives of the medical profession in other countries. Sir Robert Bolam and Dr Cox would combine action and sympathy in the appropriate degree.

Dr Douglas hoped that at all events the Medical Secretary would attend and would attend as a sympathetic visitor. He thought the Treasurer too much afraid of entanglements. The

Association was not a damsel whose head might be turned by flattery but almost a centenarian. It argued wisdom—but he did not see that it argued subtlety—on the part of the organizers of this international movement to endeavour to secure the interest of one of the most important organizations in the world.

The Chairman said that it would be very inconvenient for him personally to go and he thought Dr Cox would suffice as an observer.

Mr Souttar supported the proposal that Dr Cox, at all events, should attend. The speaker had seen at close quarters the solidarity of the profession in Switzerland, the whole of the Swiss doctors worked together in one organization. As for a Medical League of Nations, was it desired that the profession in Britain should stand outside like the United States outside Geneva?

The Medical Secretary said that he had certainly been impressed by the way in which the International Association had developed. Among the countries adhering was Germany, where 87 per cent of the profession were inside their Association. He thought it would be well to send an observer, partly on of courtesy and partly to watch the development of events.

Dr Walker said that the position had evidently altered since the Council in October last decided against adhesion, and the movement which was thought likely to be a failure, now seemed to be shaping for success.

The motion that the Medical Secretary attend the general meeting as an observer was carried.

#### Reports from Delegates

Written reports were received from Dr Helen Ingleby and from Dr H M Cohen who were delegates appointed by the Council to represent the Association at the annual session of the American Medical Association in May. The Chairman said that Dr Ingleby's report was particularly interesting, racy, and valuable. Dr Cohen was, unfortunately, prevented by illness in his family from taking as active a part as he had wished to do.

The thanks of the Council were accorded to both delegates.

A report was also read by Dr C Hubert Bond, who attended, on behalf of the Association, the Pinel and Vulpian centenary celebration in Paris. A vote of thanks was accorded to Dr Bond.

#### Science Committee

Dr Hawthorne, for the Science Committee, submitted a report on the work done by the Association's scholars and grantees for 1926-27 and a number of recommendations were agreed to concerning the appointment for one year of the Ernest Har Scholar and three Ordinary Research Scholars, and the distribution of grants to ten laboratory and other

research workers in aid of expense incurred. The Ernest Hart Scholar appointed was Claude Howard Whittle, M.A., M.D., M.R.C.P. (Cambridge), second year, and the Ordinary Research Scholars were Gordon Roy Cameron, M.B., B.S. Melb., William Combe Wilson, M.D., F.R.C.S. Ed., second year, and Dugald Brind, B.Sc., M.B., Ch.B., D.P.H. Glasg.

#### National Health Insurance

Dr. Dun, for the Insurance Acts Committee, reported that a number of very important negotiations had been carried on with the Ministry of Health, and, in some cases, brought to a satisfactory conclusion. One of these was with regard to machinery to prevent wholesale canvassing consequent upon the facilities for free and immediate change of doctor, and to safeguard the discretion of the doctor in giving certificates in view of those same facilities. With regard to disciplinary procedure, he believed that the committee had evolved, with the help of the Ministry, a series of alterations which would provide for fair play and would do away with the feeling amongst insurance practitioners that some sort of appeal to the courts was necessary.

#### Scale of Salaries for Scottish Appointments

Sir Robert Bolam brought forward the report of a conference between representatives of the Association and the Society of Medical Officers of Health, which dealt with the application of the agreed scale of salaries to Scottish public health appointments. His statement was of the same character as that which was addressed to the Representative Meeting. Its effect was that in view of the admittedly difficult circumstances in Scotland there should be, for a limited period, a special scale for that country, and that, in the meantime, the Society and the Association should confer with a view to making certain modifications which would render the whole position for Great Britain homogeneous.

Other matters considered briefly by the Council (for it was time for the Representative Meeting to begin) included a proposed amendment of the model memorandum of association of an Oversea Branch which the Australian Federal Committee desired but which the Central Ethical Committee considered to be unnecessary, and a proposal that certain enlargements be made at the house of the Association in Edinburgh, a matter which was remitted to the Building Committee for investigation.

#### Wednesday, July 20th

The first meeting of the new Council was held in Edinburgh on July 20th, Sir Robert Bolam again presiding. The following members were present:

Sir Ewen Macleay (President Elect), Dr. Hawthorne (Chairman of Representative Body), Mr. Bishop Harman (Treasurer), Dr. Lyndon (Deputy Chairman of Representative Body), Dr. Baicoff Anderson, Dr. J. Armstrong, Dr. F. J. Baildon, Sir A. Blenkinsop, Dr. Bone, Dr. Bustowe, Dr. Dain, Dr. Douglas, Mr. T. P. Dunhill, Mr. McAdam Eccles, Dr. T. Fraser, Dr. Gomez, Dr. F. W. Goodbody, Dr. Wallace Henry, Dr. Hillman, Dr. Hudson, Dr. Johnson, Dr. Langdon-Down, Dr. Le Fleming, Dr. Leslie, Dr. Lewis Lloyd, Dr. J. Livingston London, Dr. McCutcheon, Dr. McDonald, Dr. Mouton Mackenzie, Dr. Mauchell, Dr. Matthews, Dr. Muirrell, Lieut. Colonel O'Kinerly, Dr. Paterson, Dr. R. C. Peacocke, Dr. J. R. Pytheich, Dr. Radcliffe, Dr. E. H. Snell, Mr. Souttar, Dr. E. A. Starling, Dr. Lockhart Stephens, Dr. J. Stevens, Dr. A. Street, Dr. Thomas, Dr. Carl Thottel, Mr. Turner, Sir Jenner Verrall, Dr. Walker, Dr. Wilshe, Mr. A. M. Webber, Sir W. de C. Wheeler, Dr. W. E. A. Worley, and Dr. Brackenbury (who succeeded Sir Robert Bolam in the chair).

#### The Chairmanship of the Council

Dr. Wallace Henry, in moving that Dr. H. B. Brackenbury be elected Chairman of Council for the ensuing three years, said that it was a matter of the deepest regret to them all that it should be necessary to say good-bye to Sir Robert Bolam as Chairman of Council. They had all hoped that it might have been possible to induce Sir Robert to remain until he had brought the Association into full enjoyment of the glories of the promised land. His intention however to relinquish his office at the end of seven years was quite immovable, and therefore they had to elect a successor. There were various things, obvious to them all, which might be said in commending Dr. Brackenbury's name. One might dilate upon his great services to the Association, the sacrifices he had made on its behalf, and the eminence of his public career. But there were other reasons. The Association was committed to a great building scheme—a scheme which of necessity must to some extent tax its resources—and the Chairman of Council would

have to take a leading part in the furtherance of that scheme. Therefore it was a great advantage that Dr. Brackenbury had been in touch with the scheme from the beginning. There would be many calls upon his time in that and in other respects, and here again they were fortunate in the circumstance that Dr. Brackenbury had virtually retired from practice, having wholly given up his insurance work and a large portion of his private work. Then the profession was likely to be faced during the coming years with many more encroachments upon private practice, it would be necessary to uphold the principles of the Association before Government departments and various bodies, and no man was better fitted to do so than Dr. Brackenbury. His shrewd wisdom, something like that of a Presbyterian elder, would appeal to the Scot, his persuasive eloquence would sound good to Celtic ears, and his quick and able mind would be the admiration of them all. Dr. Brackenbury had not only had a wide experience of private practice but of public affairs. In a large Association like theirs it was very desirable that one at least of the chief officers should himself be a general practitioner.

Sir Jenner Verrall, in seconding, said that service to the Association *per se* was not the main ground on which a chairman should be appointed. So far as that service connoted capacity for conducting the work of the Council it was important, but there was no vested interest in the chairmanship, and it must not be considered as a reward for long or much service. The Council would appoint the man it thought best fitted to guide its deliberations and speak for the Association. He hoped Dr. Brackenbury would be elected by general acclamation.

Dr. Langdon Down desired to add his voice in favour of the proposal.

There was no other nomination, and the proposal was carried unanimously, whereupon Sir Robert Bolam invested his successor with the badge of office amid acclamation.

Dr. Brackenbury, in taking the chair, said that his colleagues had paid him a very high compliment, and had imposed upon him a great responsibility. He was old enough to recognize his faults of character and behaviour as well as anybody else, and he regarded each of them as a convincing reason why he should not be placed in that position and a complete justification for those hesitations which were natural in making such a choice as this. When he recalled the only two of his predecessors whom he had known—Dr. Macdonald and Sir Robert Bolam—he was conscious again that he could not attempt to repeat the success with which they had held the office, but he would do the best he could, and he was sure he would have their support and indulgence. He was somewhat alarmed at the picture painted by the mover of the resolution, which seemed to envisage a series of contests, in which relative strength would be a matter of great importance. He was sure that the business of the Association was not going to be conducted, whether in the Council chamber or outside, in the fear or in the spirit of combat. Dr. Brackenbury added that it happened that he had been Chairman of his Division, President of his Branch, President of a Section, and Chairman of the Representative Body, and now by their kindness he became Chairman of Council. He thought that must be a record, though it might have been equalled by Dr. Macdonald. It was a record of which he was proud—he hoped not unduly—and whatever the faults of which he had spoken there were certain compensating qualities by which they had been good enough to recognize and which he hoped to place at the service of the Council and of the Association. (Applause)

#### The Retiring Chairman

Mr. Bishop Harman said that the Council was glad to see Dr. Brackenbury in the chair, but regretful that Sir Robert Bolam was out of it, and if the latter feeling predominated at the moment he was sure Dr. Brackenbury would understand it. He remembered that when he (the speaker) first came into the Association and saw the mighty men on the dais, he wondered eventually whether they would seem quite so big if he ever came close to them. Since that time he had been very close to Sir Robert Bolam, and he had not diminished one jot in his stature. His force of character, the kindness of his disposition, were just as evident, just as constant on a near approach as they had been from a distance. It had been the greatest pleasure and a great honour to serve under him, and he desired to voice the wishes of the Council that he might have yet many days of great service to his city and his University, and still more

the Association and the profession at large. Many words would not add to the weight of such a proposition, and he left it at that.

Dr Macdonald also wished to join in the general expression of thanks and good wishes. He could remember Sir Robert Bolam from his entrance into Association affairs and from the beginning he was marked out as a man to look to.

Dr Wallace Henry said that every member of the Council would wish to add a word to this resolution. During his own tenure of office as Chairman of the Representative Meeting he had been in close touch with the Past Chairman of Council in all the business affairs of the Association. He knew the work which Sir Robert Bolam had put in in connexion with the new building long before anything was made public. Indeed his anxieties as to the matter almost caused him to break down. He had sacrificed a great deal for the Association, and no thanks there could accord him were too great.

Sir Ewen Maclean as a link with the shadowy past said that he too remembered Dr Bolam (as he then was) when his first came into prominence in the work of the Association. He likened his personal qualities to the parts of a good prescription—the basis, the adjuvants, the corrigens, and the constituents.

Dr C. E. Douglas also added a word of thanks. He rejoiced to think that Sir Robert Bolam's services would still be available to the Council and the Association.

Sir Robert Bolam was greeted with very hearty applause on rising to respond. He said that he had had seven very full and continuous years, but happy years because he had been helped by so many colleagues and friends. In the beginning he was specially helped by Macdonald and later on by one who was no longer with them—Heslop—and then Wallace Henry. In the last three years the triumvirate Brackenbury, Harman and himself had done what they could for the Association. It was a great wrench to lay down work of this kind, but he was happy in the thought that the scheme which was dear to his heart would go forward with the support of the Council and the Representative Body, and he might yet take a hand in it. There was only one other word he wanted to say, and that was to express the hope that his successor would find the same happiness and receive the same good fellowship. (Applause.)

#### South African Medical Congress

The Council proceeded to consider an invitation from the executive council of the South African Medical Congress arranged for March 1928 in Bloemfontein and the first congress of its kind to be held in South Africa under the auspices of the Medical Association of South Africa (British Medical Association), to send delegates.

The Medical Secretary said that Dr Alice Cox the very energetic secretary of the executive council who recently visited this country had said that it would break the hearts of some of them out there if they found a large number of Americans attending, as seemed likely and the home country and Association unrepresented.

The Chairman thought it would be the desire of the Council that the President Sir Robert Philip should be asked to attend if he could possibly arrange to do so. Sir Robert Bolam and Sir Jenner Verrill also strongly urged that the President was the right man to go out to represent the Association in this matter and it was unanimously agreed by the Council that Sir Robert Philip be officially approached on the subject.

Dr Dain desired that Sir Robert Bolam should also be asked to attend and Dr MacKenzie supported this plea, urging that to have in South Africa both the President and the Past Chairman of Council would put the coping stone on the work already done there. The Council signified its desire that Sir Robert Bolam should if possible attend in addition to the President, but Sir Robert said that he could not decide offhand and if he were compelled to give an answer at the moment it would be a regretful negative. But he promised to consider the matter.

#### Child Guidance Council

An invitation from the Child Guidance Council that the Association should appoint a representative to serve there was considered. The Chairman said that this was evidently going to be an important body because it had substantial financial backing from the other side of the Atlantic. It was proposing to establish a demonstration clinic in London mainly for children of disorderly mentality. In America work of a

like character had been carried on for a considerable number of years with great success. In reply to a remark, he said he was quite certain there would be no attempt to impose American methods.

Mr Turner hoped the Council would accept this invitation. He believed the body was likely to do good work. Dr Langdon Down and Mr Bishop Harman also supported, and Sir Ewen Maclean said that participation would not necessarily result in the adoption over here of American methods. After visiting parts of Canada and the United States he thought it very likely that a deputation going from the Association and other bodies in this country was likely to come back with useful information as to how not to do things as well as how to do them. There could not be too much mutual study of common problems.

It was agreed that a representative should be nominated, and Dr Langdon Down was asked to serve.

#### Place of Annual Meeting 1931

An invitation from the Esplanade Division to hold the Annual Meeting in 1931 at L. Stourne where no meeting has previously been held was received by the Council.

Sir William Wheeler said that an invitation for 1931 was sent as was from Dublin. The delay had not been at all on the part of those who spoke for the profession there but it had been due to the necessity of getting the invitation countersigned by the Executive Council of the Irish Free State Government in lieu of local bodies as in Great Britain. The Government had recently passed through a general election and still more recently there had been the tragedy of an assassination and this matter had therefore turned. But it was the unanimous desire of the members of the medical profession that the British Medical Association should meet in Dublin in 1931.

The Chairman expressed the thanks of the Council to Esplanade and said that an expression of thanks would be sent to Dublin when the invitation duly arrived. The decision could be left to a subsequent meeting.

#### Election of Committees

The remaining business before the Council was the choice of dates for Council and committee meetings during the ensuing year, the election of members to standing committee and the continuation or fresh appointment of special committees. The Arrangements Committee was set up with six members representing the Council and six the Cardiff Local Committee. The Parliamentary Elections Committee was reconstituted. Dr Graham Little M.P. and Dr Morton Mackenzie being appointed as fresh members to fill vacancies.

Sir Ewen Maclean moved the reappointment of the Committee on Caustion or Puerperal Forbidity and Mortality, saying that it was of real importance that this committee should be kept in being and should have matter referred to it which were appropriate to its work. The committee was reappointed, and Dr C. E. S. Flemming and Dr Colston Williams were invited to fill vacancies. The Ophthalmic Committee, the Pharmacopoeia Committee and the Psycho Analysis Committee were also reappointed the last named with some widening of its membership so as to include representatives of different schools of thought. On the motion to reappoint the Committee on Lunacy Law and Mental Disorder the question was raised whether the general practitioner element on the committee was sufficient in view of the desire of the Representative Body that general practitioners should be adequately represented, and it was agreed to add the name of Dr F. Palfrey. Other committees reappointed were the Building Committee, the committee concerned with recruitment or medical practitioners in case of war, the Poor Law Reform Committee (on which Sir Richard Luce took the place of the late Dr Padesley Bailey), and the Committee on the Royal Commission on National Health Insurance. With regard to the Pathological Committee, Dr Hawthorne said that the one recommendation received back by the Representative Body was one which came within the compass of the Public Health Committee. He suggested that it be referred to that committee and that some representative of the old Pathological Committee and of the newly formed Association of Clinical Pathologists be asked to attend. This was agreed to.

Dr Brackenbury and Dr Paterson were again nominated as representatives on the Council of the Society of Medical Officers of Health.

 Dr P Wallace Henry Leicester  
 Dr A Lyndon Hindhead  
 Dr S Morton Mackenzie Dorking  
 Sir Jenner Verrall Leatherhead

## POOR LAW REFORM COMMITTEE

Dr H S Beadles Romford  
 Dr J W Bone Luton  
 Dr H Gny Dun Birmingham  
 Dr H C Jonas Barnstaple  
 Dr E Lewis Lloyd Fowyn  
 Sir Richard Luce M.P. London  
 Mr E W G Masterman London  
 Dr F Radcliffe Oldham  
 Two members to be nominated by the Society of Medical  
 Officers of Health  
 Two members to be nominated by Poor Law Medical Officers  
 Association

## PSYCHO ANALYSIS COMMITTEE

Dr H Godwin Baynes London  
 Dr R C Bristowe Wington  
 Dr William Brown London  
 Dr P G Gordon Bath  
 Dr Isabel E Hunt on London  
 Dr Ernest Jones London  
 Dr L P Lempriere Hertford  
 Dr Peter Macdonald York  
 Dr J S Man-on Warrington  
 Dr R Laugdon Down Teddington  
 Dr Christine Murrell London  
 Dr L A Parry Hove  
 Dr J P Rees London  
 Dr T A Ross Pen-hryn  
 Dr C Worsler Drought London

## PARLIAMENTARY ELECTIONS COMMITTEE

Dr H Guy Darr, Birmingham  
 Dr C E Douglas Cypar  
 Mr W McAdam Eccles, London  
 Sir Thomas Plateroff, Bolton  
 Dr R Wallace Henry, Leicester  
 Dr E K Le Fleming, Wimborne  
 Dr E Graham Little, M P, London  
 Sir Richard Luce M P, London  
 Dr J A Macdonald, Taunton  
 Dr S Morison Mackenzie, Dorking  
 Dr Christine Murrell (nominated by Medical Women's Federation)  
 Mr F B Turner London  
 Sir Jenner Verrall, Leatherhead  
 Four members to be nominated by the National Insurance Defence Trust  
 A medical representative from the Local Election Committee formed in any area in which an approved medical candidate is standing for election

## PUBLIC HEALTH COMMITTEE.

Dr W F Dearden, Manchester  
 Dr T Eustace Hill, Darlington  
 Dr G B Hillman, Wakefield  
 Dr E Lewis Lloyd, Towyn  
 Dr J B Miller, Bishopbriggs  
 Dr F Radcliffe Oldham  
 Dr C F T Scott, Willesden  
 Dr G Clark Trotter, London  
 Dr G F Buchan, London, } Two members of Council elected  
 Dr E H Snell, Coventry } by the Public Health Service members  
 Two members to be nominated by the Society of Medical Officers of Health  
 One member to be elected by Medico Political Committee

## PUERPERAL MORBIDITY AND MORTALITY COMMITTEE.

Lady Barnett, London  
 Mr G H A Comyns Berkeley, London  
 Dr J W Bone, Luton  
 Dr G F Buchan, London  
 Dr H J Cardale, London  
 Dr C E Douglas, Cypar  
 Dr T Watts Eden, London  
 Dr C E S Flemming, Bradford or Atton  
 Sir Ewen Maclean, Cardiff  
 Dr Christine Murrell, London  
 Dr Mabel Ramsay, Plymouth  
 Dr W E Thomas, Ystrad Rhondda  
 Mr E B Turner, London  
 Sir Jenner Verrall, Leatherhead  
 Mr E Colston Williams, Cardiff  
 Dr Edward Williams, London  
 Chairman, Medico Political Committee

## SCIENCE COMMITTEE

Dr G A Allan, Glasgow  
 Professor W E Dixon Cambridge  
 Professor G E Gask, London  
 Dr R G Gordon Bath  
 Dr H J M Milbank Smith, Worthing  
 Dr Ronald Miller, London  
 Sir Humphry Rolleston, Cambridge  
 Mr H S Souttar, London  
 Mr E B Turner, London  
 Mr R J Willan, Newcastle upon Tyne  
 Mr W G Spencer, London (Honorary, Irishman).

## SCOTTISH COMMITTEE

Members of Council who represent Scottish Branches  
 Dr T Fraser, Aberdeen  
 Dr J Livingstone, London, Hamilton  
 Dr J G McCutcheon, Glasgow  
 Dr G W Miller, Dundee  
 Dr J Patrick, Glasgow  
 Dr John Stevens, Edinburgh

Direct Representatives of Scottish Divisions  
 The names appear in the next column  
 remain to be co-opted

Four members

## WELSH COMMITTEE

Members of Council who represent Welsh Branches  
 Dr E Lewis Lloyd, Fowyn  
 Dr J R Prytherch, Llangynni  
 Dr W E Thomas, Ystrad Rhondda

Secretaries of Welsh Branches

Dr E Lewis Lloyd (see also above)  
 Dr A A Prichard, Cardiff

One member to be appointed by each Division situated wholly in Wales, including Monmouthshire  
 The Chairman and Secretaries of the Welsh Practice Subcommittee

## CONFERENCE WITH REPRESENTATIVES OF SOCIETY OF MEDICAL OFFICERS OF HEALTH

Dr C O Hawthorne, London,  
 Dr H B Blackenbury, Hendon,  
 Sir Robert Bolam Newistle upon Tyne,  
 Dr R Langdon Down, Teddington,  
 Dr J B Miller, Bishopbriggs  
 Representatives of the Society of Medical Officers of Health

Representatives of  
the British Medical  
Association

## SCOTTISH COMMITTEE

## ELECTION OF DIRECT REPRESENTATIVES

The following have been elected members of the Scottish Committee for the ensuing session

GROUP I—Aberdeen, Orkney, Shetland, Banff, Meivay, and Nairn, Caithness and Sutherland, Inverness, Islands Ross and Cromarty Dr J E SKINNER, Skene, and Dr G SMITH, Soudy, Elgin

GROUP II—Dundee, Fife, Perth, and Stirling Dr D FIORI DICKSON, Lochzelly, and Dr G W MILLER, DSO, Dundee

GROUP III—Edinburgh, Lothians, South Eastern Counties, Dumfries and Galloway Dr NORMAN P FAIRFAX, Inverleithen, Dr C MOWBRAY PEARSON, Edinburgh, and Dr J D COVRIE, Edinburgh

GROUP IV—Glasgow Central, Eastern, North Western, and Southern Dr G A ALLAN, Glasgow, Dr A K CHILMERS, Glasgow, and Dr JOHN PATRICK, Glasgow

GROUP V—Argyllshire, Ayrshire, Dumbartonshire, Lanarkshire, and Renfrew and Bute Dr W DOUGLAS FRAEY, Kilmarnock, Dr J LAURIE, Greenock, and Dr JAMES B MITLER, Bishopbriggs

The members of Council representing Scottish constituencies are also members of the Scottish Committee, and four additional members may be co-opted

## THE SECRETARIES' CONFERENCE

The Secretaries' Conference was held on the afternoon of July 20th at the Scottish House of the Association, Drumshough Gardens, Edinburgh. There was a large gathering of honorary secretaries, who inspected the House with much interest. Dr J G McCUTCHEON (Glasgow North-Western) was voted to the chair.

## Secretarial Problems

Dr J C LYNN (York) read a short paper on secretarial problems connected with the organization of an urban Division. He recited the recent history of his own Division, which had formerly languished, but now had entered upon a more prosperous period. The membership in 1924 was 65, at present it was just over 100, but there were still over 50 non-members. One of the first things which the resuscitated Division set out to do was to fix private fees, and these had been loyally accepted. It had been found useful to call general meetings of the profession in the area, without the backing of the whole of the local profession it was not possible to carry through any serious ethical procedure. Such meetings also furnished an opportunity of increasing the membership. With regard to the relations with the Local Medical and Panel Committee, care had been taken to ensure that that body worked with the Division, but each organization had its separate functions, and there was no overlapping. The relations with the local authorities, and in particular with the medical officer of health, were very happy, and it was understood by the city council that the Division was entitled to express medical opinion in the district. The local press was utilized as occasion offered to influence public opinion.

Dr E LEWIS LLOYD (South Carnarvon and Merioneth Division and North Wales Branch) dealt with the same subject, but in connexion with a rural Division. In such largely extended areas as his own, he said, it was difficult to get any large attendance at a meeting. For a business meeting, pure and simple next to nobody would turn up, and the field of medico-political discussion had altered considerably since the creation of Local Medical and Panel Committees. He had never been discouraged by an attendance of only eight or nine at a meeting, because he knew what it cost those eight or nine to come. He was bound to say, however, that the documents sent occasionally by the Medical Secretary to the Divisional

secretaries discouraged him more than anything he received because of their account of the big and brisk things which were being done by more favoured Divisions, whereas his own Division on paper could only put up a poor showing. But to those who were aware of the conditions in rural areas, especially in such an area as his own—97 miles long, with three trains a day—very modest numbers and results would not appear insignificant.

Dr H ROSE (Buckinghamshire) described certain efforts made in his Division to increase the membership by canvassing those on the non-member list. A good attendance—15 or 16—was usually secured at his Divisional meetings because they were arranged to take place immediately after the Panel Committee meetings. Dr J KENNISH (Windsor) found it possible to get good attendances when anything very striking was on the programme but at a lecture of the ordinary type, even when given by a first rate man the attendance was sometimes apt to be very disappointing. Dr H D POOLER (Cheshire) who came from an area which might be described as both rural and urban, said that it was very discouraging to the officers to see a small attendance at purely business meetings, and yet at all times to them, because they ought to be assured that when they acted they had the members behind them. He found difficulty in getting good attendances at meetings when medico-political discussions were arranged but members would come to clinical meetings. Propaganda and non-members seemed rather hopeless so far as the whole had been long in the profession were concerned more was to be gained by concentrating on the newly qualified.

Dr P I DUTTON (St Pancras) said that his Division had lately been recited and the average attendance at sectional meetings was between 40 and 50. The membership had risen from 146 to 210 during the last two and a half years. One thing they had ought to be arranging, the programme was first rate, speakers with well known names. The Division also kept in touch with the three members of Parliament for St Pancras constituencies whom he always reminded that the average medical practitioner was worth fifty votes. Dr R E MOISE (North Northumberland) thought that the thing to do in order to get members to turn up at clinical meetings was to choose a subject of interest to the general practitioner. Dr W D MACARTHUR (Islands of Scotland) said that in his Division which included Lewis, Skye and parts of the coast of Ross-shire, an attendance of eight or ten was secured and it took some of the members two days to come.

Dr H S BEALES (Stratford) said that one of the serious reasons why the Divisions were not going in for medico-political work was that such work was being left to the Panel Committees. It had no business to be so left. Dr C G C SCRIVANER (Croydon) stressed the importance of business meetings, while admitting that attendances at such meetings were poor. Dr GOSWAMI (Darlington) emphasized the value of the B.M.A. Lectures and said that on one occasion in his own Division when a British Medical Association lecturer came down they had an attendance of at least 100 per cent. Dr A J LEWIS (Southport) reported good attendances in his Division. Dr LOCKHART STEPHENS (Portsmouth) said that the time of meeting was important from the point of view of attendance. In his Division the attendance had increased since the meetings were fixed for 9 p.m. For the benefit of members living in the Isle of Wight who could not get a return boat he pointed out that the night was provided by members of the Portsmouth Division. The Medical Secretary said that the discussion illustrated once again the fact that it was the personality of the secretary which counted for very much. He congratulated the secretaries of the York and St Pancras and other Divisions which had lately gone towards a markedly and praised also such attendances as eight or ten in Skye which had a value, the journey considered equal to far more impressive numbers elsewhere.

The two operators were accorded a vote of thanks.

#### Local Bills in Parliament

The Medical Secretary said that on one or two occasions lately complaints had been received from areas to the effect that they had found certain matters embodied in local legislation in Parliament affecting the medical profession and that nothing had been done in the matter at headquarters. He would suggest that in these matters the earliest action could be taken locally before the parliamentary bill stage was reached for it was not easy to upset the local bills when they had once reached Parliament. The people at the periphery must be aware that a bill was being promoted, and it was a very easy matter for them to see the proposed bill at the office of the town clerk and to make their representations before the bill went up. This was a thing to be looked after locally.

#### The Subscription to the Association

Dr W STOBIE (Oxford) brought up a discussion on the subscription to the Association. He said that for some country doctors three guineas represented a considerable sum of money. A lower subscription would result in a larger membership and if there was a certain diminution of total income it might be met by economies in various directions. Dr L A PARRY (Brighton) said that the Association, to be strong must have large financial resources, and as a member of the Finance Committee he protested against the suggestion that the subscription was too large.

Dr H ROSE and one or two other secretaries thought that the question of the subscription should be examined with a view to its possible diminution in order to meet cases of real hardship on the part of some struggling practitioners. Dr F J BIRNBY however pointed out that hard cases made bad law. Although one had every sympathy for those members of the profession who were in financial stress, the welfare of the profession and of the Association as a whole had to be considered. It would be a disaster if the energies and activities of the Association as a result of which every medical man in the country benefited were hampered or hindered in any way.

Dr STOBIE moved and Dr ROSE seconded that the Council be asked to consider very carefully the possibility of a reduction of the subscription to the Association.

An amendment was proposed by Dr MURRAY to add the words "owing to the poverty of a number of members of the profession in some districts" but Dr Stobie would not accept this amendment and in the absence of a seconder it fell to the ground. Dr POOLER wished to add at the beginning of the motion the words "This without committing this meeting to any expression of opinion for or against the Council he asked, etc." but the Council declined to accept this amendment.

Dr W P TRENKLE (Willesden) said that he had now been on the Council for five years and he could assure his fellow secretaries that the work of the Association was conducted in the most economical fashion and that it was absolutely impossible at the present moment to reduce the subscription. He hoped the meeting would not ask the Council to consider such a reduction.

Dr Stobie's resolution was then put to the meeting and negatived by a very large majority, only five voting in its favour in a meeting of fifty or sixty.

#### Other Business

The membership and non-membership figures of the Divisions and Branches and a classified analysis of the non-members were considered. Dr MURRAY (Eastbourne) said that the figures would look less unsatisfactory for such Divisions as his own if members of the profession who were in practice elsewhere as whole time officers or otherwise and were merely in residence in his Division could be separately shown.

Suggestions were as usual called for to improve the Association's Annual Handbook but once again none were forthcoming. Dr Mair Smith declaring it to be unimprovable. The Medical Secretary said that the book was the product of a good many minds but the editor was the Assistant Medical Secretary Dr Macpherson to whom they were much indebted.

A committee to determine the regulations for the Treasurer's Cup golf competition 1928 was appointed, consisting of Dr L Fleming, Dr McCutcheon and Dr G H Lowe with Dr G C Anderson (secretary).

Dr C F T SCOTT (Middlesbrough) voiced the claim of the Association charities and pointed out how the benevolent funds of the profession could be incidentally helped by taking out policies with the Medical Insurance Agency.

#### THE SECRETARIES' DINNER

The honorary secretaries and their ladies afterwards dined together at the University Union under the chairmanship of Dr J G McCutcheon. The necessity of getting away in time to attend the Lister centenary commemoration had the effect of reducing speeches to a minimum but possibly the enjoyment of the eighty or so who were present was not cut down in corresponding degrees. Dr GOSWAMI or Darlington proposed the health of the Chairman and expressed his gratification at seeing a fellow Scot preside over the Secretaries' Conference. The toast of "The Officers of the Association" was proposed by Dr L A PARRY of Brighton who had to compress the virtues of three nations into two minutes. But in the two minutes he managed to pay a tribute to Dr Cox and his fellow secretaries in London, Dr Drever in Edinburgh and Dr Humes in Dublin. To Dr Drever he said the words "specially grateful" for all that he had done to name the Edinburgh meeting as pleasurable. Dr DREVER responded for his colleagues and expressed his great pleasure at seeing so large a gathering of workers for the Association in Edinburgh.

## THE ANNUAL EXHIBITION OF SURGICAL INSTRUMENTS, APPLIANCES, DRUGS, FOODS, ETC

### *Surgical Instruments*

Surgical instruments and operating room equipment were to be seen at some twelve stands at the exhibition in the Waverley Market Hall.

Edinburgh has a great history of its own in connection with surgical manufacture, and several Edinburgh firms contributed to this side of the Exhibition. Archibald Young and Son, whose house dates back nearly two centuries, a period during which it has continued the work of many generations of cutlers, showed some of the obstetric instruments for which Edinburgh is well known. Another feature of theirs was orthopedic appliances, and they also showed instruments of the type used in the ear, nose and throat department of Edinburgh Royal Infirmary.

Another Edinburgh firm with a very large range of instruments was J. Gardner and Son, who were associated with Lister, as mentioned by the President of the Association when opening the exhibition. Their exhibit included a "universal" operating table on an oil-pump base, which possessed some original features, also many instruments in rustless and stainless steel, and an apparatus for testing the patency of the Fallopian tubes. A third Edinburgh firm—Smith, Hurford, and Dysdale—showed several of the latest instruments made to the design or suggestion of Edinburgh surgeons, including those by Professor D. P. D. Wilkie, Mr. N. M. Dott, and Mr. C. W. Cathart.

Several London firms also had stalls, on most of which was an abundant display of the smaller instruments in many designs and for all manner of purposes, showing what a vast range of specialized cutlery the modern surgeon has at his command. Most of the firms also included in their exhibit in operation table embodying the latest improvements, but the operation table appears now to be fairly stabilized, and the improvements are of a minor character. The "St. Bartholomew's" operation table of Allen and Hanbury, Limited, was improved this year by the addition of a new adjustable skull clamp. Other interesting articles in the same firm's exhibit were syringes of various patterns for hipodermic injection, new models of focusing lamps, various types of anesthetic apparatus, and gynecological instruments. The ligatures and dressings and the hospital furniture shown by this firm are separately noted.

An operation table was also shown at one of the two stands occupied by Down Brothers, Limited. It had the oil pressure pump for raising and lowering. By its side was an orthopedic table sponsored by Professor Putti, very elaborate and remarkably easy of adjustment. The second exhibit of this firm was a collection of smaller instruments, including the scalpels associated with the names of Mayo and of Cile, and instruments for intestinal surgery. Among the newer appliances was Ivan McGill's portable intratracheal apparatus. A large selection of instruments were made in stainless steel.

The Holborn Surgical Instrument Company, in addition to another large selection of surgical instruments in stainless steel, had also a new pattern of pedestal operation table. This firm showed some of the most recent models of diathermy electrodes, one of them specially designed for treating the prostate. A range of lamps for examination purposes, French's blood aspiration apparatus and needle, and a posterior urethral tube for Harrison's retro-methioscope were among the other exhibits to which special attention was drawn.

The exhibit of the Genito-Urinary Manufacturing Company was devoted chiefly to a large selection of cystoscopes with various attachments, including one for diathermy, also a cysto-methioscope designed to meet the demand for an instrument to enable both examination and operation in the bladder and posterior urethra. The diathermy apparatus exhibited included one large model designed for both surgical and medical applications, with dry spark gap.

Mayor and Phelps exhibited their "Chloron" chloroform inhaler, designed to eliminate all possibility of pumping out liquid chloroform either by wrongful attachment of bellows or by overfilling. Another anesthetic outfit of this firm was designed to supply a warmed atmosphere of oxygen, nitrous oxide, or carbon dioxide, or of these gases in combination of any degree, and with or without chloroform vapour of definite strength. Other instruments pointed out were a pyloric forceps, a bladder retractor for use in Caesarean section, and perioral endoscopic instruments made to the instructions of various laryngologists. A tonsil suturing forceps to tie up tonsils from outside the patient's mouth was noted.

Another pedestal operation table on an oil pump base was the largest exhibit at the stand of Arnold and Sons (John Bell and Croyden, Limited), but here also was to be seen a special selection of gynecological and obstetric instruments, and a portable anesthetic apparatus intended for the administration of nitrous oxide, oxygen, and ether. Instruments made of stainless steel were shown, and a metal pocket-case, containing hypodermic syringe, needles, and a sterilized solution, and fitted with swing-out racks for ampoules, found considerable favour at Edinburgh.

### *Ligatures and Dressings*

Two or three stands were devoted principally to ligatures. Among these was that of the Edinburgh firm of G. F. Meison, Limited, who made a point of the fact that the manufacture of sterile surgical ligatures was important enough to be considered their main business and not a mere side-line. This firm claimed to be actual manufacturers of surgical catgut from start to finish. The raw material in the shape of sheep intestine, the finished catgut strings in dry coils, and the standard hermetically sealed glass tubes containing the sterile ligatures made an interesting exhibit. The ligatures were put up in various styles of packing suitable for use by the surgeon, the general practitioner, and in the hospital.

A similar display was made by Johnson and Johnson (Great Britain), Limited, who have been for many years concerned in the business of the preparation of ligatures and sutures. Other exhibits at this stand were rubber adhesive plasters, "red chain" cotton, a long fibre cotton, highly absorbent, and packed in a special way, sponges of uniform size and absorption, and a protective dressing and adhesive strapping combined, for minor cuts and bruises. Allen and Hanbury, Limited, showed their "London Hospital" catgut, every batch of which was stated to be passed by a consulting bacteriologist before issue, and the "Marilybena" sterilized ligatures and sutures were shown by Arnold and Sons.

An old established Edinburgh firm of manufacturing chemists, J. F. Macfarlan and Company, showed catgut ligatures prepared according to Lord Lister's and several other formulae, as well as antiseptic dressings as originally made under Lister's direct supervision. This firm exhibited a letter written by Lister in 1906, entirely with his own hand, regarding some experiments with double cyanide gauze in which the firm was co-operating with him. The firm claimed to be the first to make medicated dressings, which it did in 1871, also at the direction of Lord Lister.

Frassett and Johnson, Limited, showed the well known Seabury and Johnson preparations, including a rubber adhesive plaster made in four different widths, ranging from 1/4 in. to 1 1/2 in. on the same roll, also a vaccination shield of this material. Other exhibits here were absorbent cotton of exceptionally long staple, surgical ligatures, medicated plasters, and other things of this order.

The Thermogeno Company, Limited, again showed their medicated wadding, consisting of cotton wool, the fibres of which are stated to be impregnated with stimulating medicinal essences, and another stand was as usual devoted to the hygroscopic poultice, "Antiphlogistine."

### *Hospital Furniture*

Every year we look for some new ideas in bedsteads from Hoskins and Sewell, Limited. This year a special bed supplied to the Sunderland Royal Infirmary was on view. It was fitted with a castor-ped action, adaptable to either

the head or the foot or the bedstead, enabling it to be wheeled easily, when the desired place was reached the pad was lowered while the castors were raised from the ground, and thus the bed was enabled to stand firm. Another device was a wheeling ward screen, made of welded tube, with no nuts or screws and yet another hospital convenience was a wheel locker with a driver cupboard, pull-out seat, and extending table attachment.

Whitfields Bedsteads, Limited, showed several arrangements bearing the name of Law or Pat including the new eardiac bed tent specially designed for University College Hospital, London—a very interesting improvement—also a double wheeling bedstead with ball bearing castors, a maternity bedstead with cot attachment and a head and knee-rest bedstead for obtaining the Fowler position.

Archibald Young and Son showed the Mori on (Knox) Edinburgh bed frame and Allen and Hinchey. Included in their exhibit some hospital furniture in various sizes.

#### Light and Heat Treatment Apparatus

Two stands were occupied by the British Hanover Quartz Lamp Company, Limited, where it was stated that 100,000 of the Hanover quartz lamp outfits are now in use. The models shown included the Johnson quartz lamp for the irradiation of several patients together the "Alpino Sun" intended for the general irradiation of individual patients and the Kromayer lamp, designed only for intensive local treatment. The firm also showed a large "Sollux" lamp for ultraviolet radiation. Most of the lamps have been noted in our columns upon their introduction.

The large exhibit of the Medical Supply Association included in addition to the x-ray equipment separately noted the "Trinity" ultra-violet radiation apparatus designed to furnish radiation from the carbon arc, the mercury arc and the mercury vapour burner. This again has been recently described.

An interesting exhibit in connexion with ultra-violet was that of the Thermal Syndicate Limited in addition to mercury vapour lamps designed for use on direct or alternating current it included a number of articles in various sizes, which is pure fused quartz or silica. Chemical and other laboratory apparatus were shown here.

The radiant heat bed of the Downing Radiant Heat Company, Limited, was again to be seen—the bed is for treating the whole body and various local devices for treating any part. A new Downing appliance consisted of four radiant heat lamps and one ultra-violet lamp for treatment. The ultra-violet lamp is a tungsten lamp with a filament enclosed in a quartz glass globe, it is less powerful than the arc or mercury vapour lamp. It was shown in stand and suspended models.

Perhaps this is the place to mention the exhibit of the "Radiocool" Electro-Magnetic Blanket Company, Limited, which is fairly well described in the name of the firm itself. It consists of an electrically warmed quilt or blanket the idea being to apply electricity in wave currents at a temperature to conform with that of the body and with induction pads for intensive local application. Ultra-violet radiation apparatus was also shown subsidiary to their x-ray exhibit by the Victor X-Ray Corporation and by Philip Creswick of Glasgow.

#### X-Ray and Electro-Medical Apparatus

More x-ray apparatus was shown than usual. The Medical Supply Association exhibited the "Metath" x-ray tube already noticed in our columns in that the x-rays are generated within a metal cylinder the only radiation emerging being that which passes through an aperture provided for the purpose. The tube thus embodies its own protection focusing arrangements are provided to secure the requisite definition. This tube was shown in patterns both for radiography and for therapy and they were also at this stand x-ray installations for general practitioners and for small hospitals with which the "Metath" tube might be connected.

Coolidge x-ray tubes of various types were shown by the Victor X-Ray Corporation, Limited. These included a 100 milliamperes radiographic tube and a water-cooled therapy tube operating at 50 milliamperes.

With these was shown an instrument to stabilize and predetermine the output from any Coolidge tube regardless of line voltage fluctuations.

The firm of Philip Creswick showed a 30 milliamperes x-ray set manufactured by the Solus Electrical Company; it comprised a high tension transformer and Coolidge filament transformer, oil immersed, and contained in one unit, it could be mounted either as a permanent or movable unit. Here also was an apparatus for taking a rapid series of small pictures of the action of the duodenum.

The manufacturers of X-Rays, Limited, of London, were shown by their Scottish agent, Mr G. D. L. Rororth. Here again was an outfit designed to utilize the 30 milliamperes self rectifying Coolidge tube at an equivalent spark gap of 5 m. This outfit was recommended for routine radiography, while for work demanding more powerful equipment or involving more difficult conditions there was a 20 m. induction coil outfit, for use with either gas or hot cathode tubes. The set comprised coil, mercury break, mechanical rectifier and switch table. Both a time switch and a foot switch, affording distance control, were included. There was at this stand also much interesting accessory x-ray apparatus, together with a diathermy outfit in two units to facilitate portability. The diathermy outfit was shown in the exhibition at the stands of the Holborn Surgical Instrument Company Limited, and the Geintoun X-ray Manufacturing Company, Limited, have already been noted in passing in dealing with the main surgical exhibits of these firms.

The photographic side of x-ray work was amply demonstrated by Kodak Limited the chief place was again given to the Eastman "duphized" x-ray film, and the prints and transparencies were the wonder and also to some extent the despair, of visitors interested in x-ray work. Specimens of dental radiography were also shown, illustrating the "bite-wing" system for the early detection of interproximal cavities. The remainder of the exhibit was made up of intensifying screens, illuminators and accessories for the dark room.

#### 1 Portable Electro-cardiograph

At the stand of the Victor X-Ray Corporation Limited there was shown one of the new and most interesting things in the whole exhibition—namely a portable electrocardiograph on a new principle. This instrument which is of American design involves the introduction of amplification methods—by the use of a special three-tube valve amplifier—similar to radio-amplification in the measurement of the heart current. By this means the need for the extremely delicate galvanometer quartz string is eliminated and the place of that fragile and teasing construction is taken by a much more ruggedly constructed galvanometer in which is fastened a small mirror deflecting the light beam. Thus the film instead of recording a string shadow with the possibility of confusing lines records a spot of light. Many advantages are claimed, including not only greater convenience, but also increased accuracy, for it is claimed that by the lessened lag due to the greatly magnified scale the new electro-cardiograph can pick up and record heart currents for which the string instrument was not sufficiently sensitive. It is stated that no compensation for the patient's resistance is required, standardization of the instrument can be effected in daylight and its operation is extremely simple. We understand that portability was not the original intention but resulted as an almost unforeseen consequence of the design. The instrument is obviously interesting, but this is not the place to discuss its precise value in cardiology.

(To be continued)

#### THE EXHIBITORS' SMOKING CONCERT

THE usual smoking concert arranged by the exhibitors at the Annual Exhibition was held in the Egyptian Hall, Queen Street, Edinburgh on July 21st under the chairmanship of Mr Darrell Steel the musical programme arranged by Mr P. Corran Scott, was of the highest order. Dr C. O. Hartorne in thanking the committee for the invitation to the medical profession, regretted that owing to the very heavy programme of events arranged by the local executive committee, many members were

prevented from being present. Nevertheless, he was anxious, on behalf of his colleagues and as Chairman of the Representative Body, to assure the exhibitors that their courtesy was highly appreciated. He was glad to see that in spite of the laborious times which the exhibitors must have passed through they were able to arrange for some relaxation. Medical practitioners recognized very fully that through the assistance afforded them by the manufacturers the profession was able to help suffering humanity, and that without the co-operation of the manufacturers its hands would be tied. Dr Hawthorne complimented the exhibitors on the fine display which had been brought together in the Waverley Market, and hoped that their efforts would be successful from a pecuniary point of view. Mr L. Ferris Scott (Financial Secretary), and Dr G. C. Anderson (Deputy Medical Secretary) also congratulated the exhibitors on the display arranged, and hoped that their efforts would be rewarded. A vote of thanks to Mr Druehl Steel for taking the chair, proposed by Mr Percy, was carried with musical honours.

### THE ANNUAL GENERAL MEETING

To the list of representatives and delegates from Overseas Dominions who were presented to the President on the occasion of the Annual General Meeting (SUPPLEMENT, July 23rd, p. 50) should be added the name of Dr E. C. Alles, representing Ceylon.

### NOTIFICATION OF INDUSTRIAL POISONING

The Factory Department of the Home Office has issued the following instructions (Form 304) under the Factory and Workshop Acts, 1901 to 1920, and the Lead Paint (Protection against Poisoning) Act, 1926.

1 Every medical practitioner attending on or called in to visit a patient whom he believes to be suffering from any of the following

Lead poisoning,  
Phosphorus poisoning,  
Arsenical poisoning,  
Mercurial poisoning,  
Carbon bisulphide poisoning,  
Aniline poisoning,  
Chronic benzene poisoning,  
Anthrax,  
Toxic jaundice,  
Epitheliomatous ulceration, or  
Chromo ulceration,

contracted in any  
factory or workshop,

is required by section 73 of the Factory and Workshop Act, 1901, under penalty, to notify the case forthwith to the Home Office, and by section 3 of the Lead Paint (Protection against Poisoning) Act, 1926, he is also required to notify lead poisoning contracted by any person employed in or in connexion with the painting of any building whether or not that building is a factory or workshop, unless it has already been so notified, and he is entitled to a fee of 2s. 6d. for so doing. The notice should state clearly the name, address, and occupation of the patient, the disease from which he or she is suffering, the factory or workshop or, in the case of a painter, the premises at which he or she has been employed and is believed to have contracted the disease, the name and address of the notifying practitioner, the date of notification. The notice should be addressed to the Chief Inspector of Factories, Home Office, London, S.W.1. No stamp need be affixed. Forms for notification (Form 303) will be supplied on application.

2 It will be observed that the opinion to be notified is twofold: (i) that the patient is the subject of one of the diseases or forms of poisoning specified above, and (ii) that the practitioner believes the poisoning to have been contracted in a factory or workshop or in or in connexion with the painting of a building.\* If the patient has previously been seen by another practitioner a third question arises—namely, whether the case has already been notified. If after reasonable inquiry it appears that it has not, the notification should be sent. There is no power to allow a fee for a notification which is not in accordance with the terms of the section.

3 When a plumber is affected there may be doubt as to his actual employment in a factory or workshop. Notification of lead poisoning affecting a plumber should be made, as he generally spends some portion of his time dealing with lead material in a factory or workshop occupied by his employer.

\* The object of notification is to afford to the factory inspectors a clue to dangerous conditions over which they can exercise control and their powers in this respect are limited to factory and workshop premises and to buildings the painting of which is being carried on. Notification of poisoning contracted otherwise (for example from lead in drinking water, from arsenic in food or even from industrial employment outside the factory Acts—such for instance as the occurrence of ceratoid epithelioma in a chimney sweep) being non-statutory, would be incomplete and therefore useless for statistical purposes.

4 Doubt has been felt by some practitioners as to the circumstances in which recurring attacks in the same person require re-notification. If the affected person continues at work, successive attacks, especially when distinct from those preceding, should each be notified. The case of persons affected with chronic poisoning who have ceased work stands on a different footing, seeing that the latter phases are not attributable to any new exposure to harmful factory or workshop conditions. Such cases have presumably been reported on previous occasions and it is not necessary to re-notify continuance or even recurrence after employment in dangerous processes has come to an end.

5 *Aniline Poisoning*—This term is meant to include the effects generally known under the term 'anilism'—that is, haemolytic action on the red blood cells so that the lips and complexion assume an ashen grey colour, with shortness of breath, etc.

6 *Chronic Benzene Poisoning*—This takes the form of myelopathic anaemia when small quantities of benzene are inhaled over a period of weeks or months.

### National Insurance.

#### RANGE OF MEDICAL SERVICE

WE have received from the Ministry of Health a copy of the decision of referees appointed by the Minister to settle a question arising under Article 38 of the Medical Benefit Consolidated Regulations, 1924. The referees were Mr E. H. Tindal-Atkinson, C.B.E., Barrister-at-law (Chairman), Dr Alexander Forbes, and Dr John Steed. Their report (slightly abridged by us for publication) is as follows.

Our inquiry was held in relation to the question whether amputation of the second toe at the metatarsophalangeal joint as a cure for hammer toe is within the range of medical service within the meaning of Article 38 and Clause 10 (2) of the Terms of Service for insurance practitioners.

The operation had been performed by Dr Malcolm Macleod upon Edna Norbury of Hulme. Both the Local Medical Committee and the Insurance Committee were in agreement that this operation was outside the range of medical service, and the matter was consequently referred to us by the Ministry of Health in accordance with Article 38 (4) of the Regulations. Our inquiry was held at Manchester on June 1st, 1927. Mr L. G. Dawson represented the Minister of Health, and Dr R. G. McGowan the two Committees.

There was no dispute as to Dr Macleod possessing the skill necessary for this operation from actual recent practice in performing this kind of service, and it was admitted that he was recognized locally as proficient in this respect.

The contentions put forward on the part of the Minister may be summarized under the following heads:

(a) The operation is well within the competence of a general practitioner.

(b) The operation represents one of several forms of treatment for hammer toe.

(c) In regarding the range of medical service it is impossible to separate a particular service into (i) the decision made in selecting one of several forms of treatment, and (ii) the operation involved in the selected form of treatment.

The third contention was advanced in anticipation of the main contention put forward on behalf of the Committee, which is fully dealt with below.

The witnesses called in support of these contentions were Dr A. Y. Greenwood, Dr H. Lund, a consulting surgeon of Manchester, Dr W. Rigby, a Regional Medical Officer for the Liverpool district, and Dr W. Davidson, a Divisional Medical Officer. These gentlemen were all in agreement as to the comparatively simple nature of the operation, and we scarcely think it necessary, for the reasons hereinafter appearing, to deal with detail their several experiences in performing it, or the alternative operations which may be undertaken in a case of this character, some of which might well, upon consideration, be found to be outside the range of medical service.

On behalf of the Committee, Dr McGowan did not adduce evidence, and we summarize his contentions as follows. While it is not denied that the actual amputation is within the competence of a general practitioner, in this particular case, where a decision has to be made as to the choice of treatment, the making of that decision so far invests the general practitioner with the character of a specialist that the whole service—that is, the advice coupled with the operation—must be considered as outside the range of medical service.

Dr McGowan pointed out that of recent years, orthopaedic surgery has become specialized, and that amputation is a cure for hammer toe as out of date in a case where, for example,

rejection of the joint would produce a more favourable result and would avoid a probable complication following amputation—namely Lullux valgus with consequent union.

During the inquiry it became fairly clear to us that the Committee had disagreed from a medical point of view with the decision which Dr Macleod had come to in selecting this form of treatment, and in a letter dated May 17th, 1927 from Dr McGowan as secretary of the Local Medical Committee, to the Minister of Health it was stated that one of the points chiefly influencing that Committee in their decision was that Sir Robert Jones, an authority on orthopaedic surgery, states in one of his books that the second toe should not be amputated for hammer toe.

In an inquiry held under Article 38 we held the view that it would not only be inadvisable but outside the functions of the referees to take into consideration or to come to any conclusion upon an issue as to the propriety from a medical point of view of the treatment carried out by the practitioner. We can only assume that the operation was legitimately undertaken and in justice to Dr Macleod there was no evidence that it was not completely successful as a cure in this particular case.

Our decision in this case must therefore be read in the light of the view as to our duties and the assumption stated in the preceding paragraph, and our unanimous opinion is as follows:

(a) The making of a decision in the choice of alternative forms of treatment is part of the duty of an insurance practitioner.

(b) The act of selecting one form of treatment does not in our opinion in the least affect the nature of the service rendered—that is in an insurance under Article 38—not in our opinion if possible upon such an issue to regard the particular service divided into decision and operation.

(c) Although amputation may not necessarily have been the best form of treatment in this case, the operation was clearly within the range of medical service.

(d) We regard as irrelevant to a decision under Article 38 considerations as to the propriety of the treatment selected.

In the result the conclusions of the Minister of Health need.

We should add that no evidence was forthcoming as to custom or practice peculiar to the Manchester district and in arriving at our decision we have therefore not taken into account any such custom or practice.

### LONDON PANEL COMMITTEE

A MEETING of the London Panel Committee was held on July 26th Dr H J CARDALE presiding.

**The Chair of the Committee.**—The chair having been temporarily taken by Dr Bayly, the re-election of Dr Cardale as Chairman of the Committee was proposed by Dr Gregg, who said that the esteem in which Dr Cardale was held by the members of the Committee and by insurance practitioners generally had increased continually during the now many years of his chairmanship. Dr Allen seconded the motion which was carried unanimously. Dr Cardale on again taking the chair thanked the Committee for the honour they had done him. The re-election of Dr Gregg to the vice-chair and of Dr A F Heald to the treasurership was also unanimous.

**Maternity Benefits.**—A special session of the Committee was appointed to consider as to measures which might be taken to secure prompt payment of sickness and maternity benefits. This arose out of a former resolution of the Committee. The Insurance Acts Committee to take up this matter and the reply of the Insurance Acts Committee that it could not see that any action on its part would have the desired effect the matter being one which did not primarily affect insurance practitioners.

**Federation of Medical and Allied Services.**—The Committee had before it a recommendation from one of its subcommittees that a representative to serve upon the Federation of Medical Allied Services should not be reappointed during the forthcoming year. The recommendation led to some discussion in the course of which the Chairman said that when he was first appointed a representative on the Federation that body took an interest in medical matters generally including national health insurance, but of late years it had dealt less with general medical matters and more with industrial medicine which subject it approached he thought not altogether from the general practitioners' point of view. Dr Clark Trotter moved the reference back of the subcommittee's recommendation. On a show of hands the voting was equal but a paper vote showed a clear majority against the reference back and the original recommendation not to appoint a representative was carried by 22 votes to 21.

### LONDON INSURANCE COMMITTEE

A MEETING of the London Insurance Committee was held on July 26th Mr DAVID DAVIS presiding.

#### Range of Medical Service

The Medical Benefit Subcommittee submitted a list of the medical services which had been held by the Local Medical Committee. The Insurance Committee agreeing to be beyond the competence and skill of a general medical practitioner. The number of these

cases into the inception of medical benefit had been 336. Of this number 229 had to do with eye testing and prescribing glasses, in 32 of the cases the service had been the giving of ultra-violet light treatment for various conditions and in 20 the enucleation of the tonsils. The remainder included a very varied range of services from salivarian injections to hysterectomy but it was pointed out by the committee that it must not be assumed that the services as such were outside the scope of medical benefit for the service was considered in relation to each particular case and its precise circumstances. Mr Rockliffe said that since he called for this report he had learned that it had been definitely agreed that the amending bill to be introduced into Parliament next year must be an agreed bill inasmuch as parliamentary time and other matters would not admit of a controversial measure. Therefore the money for any extension of services could not be obtained by the process recommended by the Royal Commission—namely the pooling of societies' funds. It might be however that somewhere there was hidden money which would enable an extension of medical services to take place and he was hopeful that this return would show that there were cases not of a very serious character in respect of which insured persons had required treatment in the past and in which some might be found under the Act of giving such treatment in the future. Miss Samuel drew attention to the fact that some of the services performed by insurance practitioners outside the scope of their obligations under the Act had been of the nature of major operations and she inquired whether any information had been received as to the results or treatment which was admitted to involve the application of skill and experience such as general practitioners as a class could not reasonably be expected to possess. The Chairman said that the Committee had received no complaints.

#### Censure for Mistaken Diagnosis

A long discussion took place on a case in which an insured person had died from a strangulated hernia after having been admitted in a moribund condition to hospital in the service of a practitioner having treated her for several days previously for a reducible hernia. In the opinion of the Medical Service Subcommittee the practitioner while not negligent in the ordinary sense of being inattentive or careless, had made a grave error in diagnosis and had not taken the steps reasonably to be expected in such a case of a general practitioner of ordinary professional competence and skill. The recommendation of the subcommittee was that he be severely censured. Mr Scott moved an amendment that the case be reported to the Ministry with a view to deduction from monies payable. He said that it was inconceivable even to a layman how a qualified practitioner could have missed the evident signs of a strangulated hernia. The details of the symptom set out in the subcommittee's report tallied with those given in a medical dictionary a significant of this condition. Dr H H Mills chairman of the subcommittee said that the case had been very carefully considered. The practitioner had been most assiduous in his attention to the patient but somehow he had not made the deduction from the evident signs which should have led him at once to send the patient to the hospital. The patient was only sent to hospital in the end as the result of the persistence of her relatives and it was then too late for an operation. But the recommendation of severe censure without a prospective fine was the very deliberate conclusion of the subcommittee. Dr Cardale said that to many medical men it seemed incomprehensible that the diagnosis should have been missed especially if it was brought to the practitioners' notice as the subcommittee found it had been, that there was faecal vomiting. That the practitioner did miss the diagnosis and honestly missed it there could be no doubt. He had tried to reduce the hernia and thought he had succeeded but what he had done no doubt was to push the swelling down more deeply into the tissues. He begged Mr Scott not to rely too much on a medical dictionary which was liable to be misleading in practice for all the given symptoms of a particular condition might be present, and yet to the doctor in charge of the case it might be evident that the condition was something different. It was easy in medicine to be side-tracked. Mr Rockliffe pointed out that on his form of medical record the practitioner had entered more than a week before the patient's death a hernia partially strangulated but Dr Mills stated that the practitioner had explained that he had used the wrong word the description which he meant to set down was reducible hernia. Mr Scott's amendment to fine as well as censure was defeated 10 voting in favour and 12 against and the motion of severe censure was carried. Mr Scott asked what were the qualifications of the practitioner but the Chairman pointed out that all practitioners on the panel were duly qualified in England and beyond this the Committee was not concerned.

### Naval and Military Appointments

#### ROYAL NAVAL MEDICAL SERVICE

Surgeon Commander H SIC Colson to the *President*, additional, Medical Department Admiralty, temporary. A. S. McIvor to the *Calypso*, Surgeon Lieutenant Commander I. W. Gunn to be Surgeon Commander, Surgeon Lieutenant Commander J. S. Elliott to the *Calcutta* on transfer. Surgeon Lieutenant A. H. Harkins is promoted to the rank of Surgeon Lieutenant Commander.

#### ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Commander T. B. Dixon to the Field for R.N. Barracks for fourteen days training. Surgeon Lieutenants R. B. Wyatt and R. A. Condon (probationary) to the Victoria for R.N. Hospital Haslar for fourteen and twenty-eight days training respectively.

H. L. Hoffmann has entered as probationary Surgeon Sublieutenant and attached to the London Division.  
Probationary Surgeon Sublieutenant E. T. Doleman to the Victoria for R.N. Hospital, Haslar, for fourteen days training.

#### ROYAL ARMY MEDICAL CORPS

The following Majors retire on retired pay: R. E. Todd, D. B. McGriggar, O. B. E., T. Dowling (and is granted the rank of Lieutenant Colonel), J. F. Grant, O. B. E.  
Captain F. C. Tibbs to be Major.  
The following Captains to be Majors (prov.), F. R. H. Mallan, M.C., A. O. F. Alloy, M.C., A. J. Beveridge, M.C., D. Fettes.

#### ROYAL AIR FORCE MEDICAL SERVICE

Flight Lieutenants J. B. Gregar to R.A.F. Base, Mediterranean, T. Sheehan to R.A.F. Station, Donibristle.  
Flight Lieutenant J. J. Walsh is transferred to the Reserve, Class D.1.  
Flying Officer Michael Joseph Marren is dismissed the service by sentence of General Court Martial.

#### TERRITORIAL ARMY

##### ROYAL ARMY MEDICAL CORPS

Lieut. Colonel G. H. L. Hammetton, C.M.C. D.S.O., T.D. (supernumerary), is retired on reduction of establishment, and retains his rank with permission to wear the prescribed uniform.  
Lieut. Colonel W. Lister, T.D., to be Brevet Colonel, with precedence of September 14th, 1926.  
Lieutenant E. G. Oastler from the supernumerary list for service with the O.T.C., to be Lieutenant, with precedence as from January 3rd, 1926.  
N. R. Rawson, late Temporary Captain R.A.M.C., to be Lieutenant, with precedence as from May 6th, 1925.  
H. S. Davies to be Lieutenant.

#### TERRITORIAL ARMY RESERVE OF OFFICERS

##### ROYAL ARMY MEDICAL CORPS

Major J. S. Ward, having attained the age limit, relinquishes his commission and retains his rank.

#### COLONIAL MEDICAL SERVICES

Dr. R. Mugliston promoted Senior Medical Officer, Gold Coast. Drs. H. R. M. Ferguson promoted Senior Medical Officer and J. G. S. Turner promoted Medical Officer of Health (Sanitary Department), Nigeria, respectively. Dr. J. S. Robinson appointed Medical Officer, Nigeria. Dr. D. C. Garnett Medical Officer, Uganda has resigned.

### VACANCIES

BATH ROYAL MINERAL WATER HOSPITAL.—Resident Medical Officer (male, unmarried) Salary at the rate of £130 per annum.  
BROFORD COUNTY HOSPITAL.—Assistant House Surgeon (male, unmarried) Salary at the rate of £130 per annum.  
BIRMINGHAM CHILDREN'S HOSPITAL.—(1) Resident Medical Officer (2) House Physician Salary £175 and £75 per annum respectively.  
BIRMINGHAM UNION.—Medical Superintendent of the Silk Oak Hospital and Medical Officer of adjoining Institution Salary £1,000 per annum, rising to £1,200.  
BRIDFORD MUNICIPAL GENERAL HOSPITAL St. Luke's.—House Physicians and Surgeons Salary at the rate of £200 per annum each.  
BRISTOL GUARDIANS.—Second Assistant Medical Officer at the Southmead Hospital Salary £200 per annum.  
CARLISLE CUMBERLAND INFIRMARY.—Two Resident Medical Officers, one to be House Physician and House Surgeon for six months each salary at the rate of £155 and £175 per annum respectively the other to be Junior House Surgeon for six months, salary at the rate of £135 per annum.  
CHESHIRE JOINT COUNTIES MENTAL HOSPITAL.—Senior Assistant Medical Officer (male unmarried) Salary £450 per annum.  
CITY OF LONDON MATERNITY HOSPITAL, City Road E.C.1.—(1) Registrar Honorarium £100 per annum (2) Honorary Dental Surgeon.  
DORSET ROYAL INFIRMARY AND DISPENSARY.—Third House Surgeon (male) Salary at the rate of £150 per annum.  
DUNEDIN NEW ZEALAND UNIVERSITY OF OTAGO.—Senior Demonstrator in the Department of Physiology Salary £400 to £500 per annum, according to qualifications.  
FIFE GOVERNMENT.—District Medical Officer Salary £500 per annum, rising to £725.  
GLEBECK CORPORATION.—Medical Officer of Health Salary £1,000 per annum.  
HEREFORDSHIRE GENERAL HOSPITAL, Hereford.—House Surgeon Salary £150 per annum.  
HULL ROYAL INFIRMARY.—Assistant House Surgeon (male) Salary at the rate of £150 per annum.  
INFANTS HOSPITAL Vincent Square S.W.—Anaesthetist.  
JOHANNESBURG UNIVERSITY OF THE WITWATERSRAND.—Senior Lectureship in Physiology Salary £516 per annum rising to £726.  
KINGSTON, FULHAM, AND CHelsea GENERAL HOSPITAL.—Senior and Junior Resident Medical Officers Salaries at the rate of £125 and £100 per annum respectively.  
KNOWLE MENTAL HOSPITAL Fareham.—Senior Assistant Medical Officer (male) Salary £700 per annum, rising to £800.  
LEICESTER ROYAL INFIRMARY.—Surgical Dressers Honorarium 10s 6d. per week.  
LIVERPOOL HOSPITAL FOR DISEASES OF THE HEART.—(1) House Physician (2) Clinical Assistants.  
MANCHESTER EINFELD HOSPITAL.—House Surgeon.  
MINOR HOUSE HOSPITAL Golders Green N.W.11.—House Surgeon (male, unmarried) Salary at the rate of £200 per annum.  
MIDDLESBROUGH NORTH RIDING INFIRMARY.—Junior House Surgeon (male) Salary at the rate of £150 per annum.  
NEWCASTLE TYNE UNIVERSITY OF DURHAM COLLEGE OF MEDICINE.—Professor of Anatomy.

NOTTINGHAM CHILDREN'S HOSPITAL.—Resident House Physician (woman) Salary at the rate of £150 per annum.  
PAISLEY DISTRICT ASYLUM.—Clinical Assistant Salary £100 per annum.  
PLYMOUTH HOMOEOPATHIC AND GENERAL HOSPITAL.—House Surgeon (male) Salary £100 per annum.  
QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—Casualty Officer Salary £100 per annum.  
READING ROYAL BERKSHIRE HOSPITAL.—House Surgeon Salary £150 per annum.  
ROYAL COLLEGE OF PHYSICIANS OF LONDON.—Milroy Lecturer for 1929.  
ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—Male Casualty Officer Salary at the rate of £150 per annum.  
SCARBOROUGH HOSPITAL AND DISPENSARY.—Two House Surgeons Salary £125 per annum.  
STAMPA'S HOSPITAL SOCIETY.—Assistant Medical Officer at King George's Sanatorium for Sailors, Liphook, Hants Salary at the rate of £700 per annum.  
SHEFFIELD ROYAL HOSPITAL.—Resident Surgical Officer (male) Salary £200 per annum.  
WEST HAM UNION.—Two District Medical Officers Salary £800 per annum each.  
WINDMILL ORTHOPAEDIC HOSPITAL, Headington, near Oxford.—Secretary and Workshops Manager Salary £550.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Towcester (Northamptonshire), Orewkerne (Somersetshire). Applications to the Chief Inspector at Factories, Home Office, Whitehall, S.W.1.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

#### CURRENT NOTES

##### Scholars and Grantees for 1927-28.

THE SCIENTIFIC COMMITTEE made the following recommendations to the Council for the year 1927-28, and they have been accepted by the Council.

##### Ernest Hart Memorial Scholarship (Value £200)

WHITTLE CLAUDE HOWARD MA MD MRCP (Cambridge).—Second year. The pathology and epidemiology of pneumonia and pneumococcal infections.

##### Ordinary Research Scholarships (Twice, each of the value of £150)

WILSON WILLIAM COMBE MD FRCSE (Edinburgh).—Second year. Injury and disease of the thoracic organs in order to elucidate the mechanical and pathological factors involved and to assess the value of treatment by surgical measures.

CAMERON GORDON ROY M.B. BS (Melbourn).—Research into the morbid anatomy, histology and etiology of pancreatic disease.

BAIRD DUGALD B.Sc. M.B. Ch.B. DPH (Glasgow).—Investigation of the bacteriology of infections of the urinary tract in pregnancy with possible application to treatment.

##### Grants

Grants to the amount of £350 were made as follows.

SHAW RONALD CUTHBERT FRCR LRCP (Manchester).—The etiological relations between the various forms of thyroid gland in toxic goitre with special reference to the surgical aspect. £70.

HOLLE JOHN CLIFFORD M.B. BS (Cambridge).—Factors influencing the blood level in normal rabbit, including diet with the administration of Ca salts orally and intravenously and of Collip parathyroid hormone. £15.

WILSON ISABEL GRACE M.B. Ch.B., MD DPM (London).—Disseminated sclerosis. £5.

GRAVE HENRIETTA HART MP Ch.B., MRCP (Sheffield).—The result of the tranplantation of endometrium and other tissues cut to the pelvic peritoneum of rabbit and the nature of the resulting tumours. £20.

CORFMAN WILLIAM SYDNEY CHARLES MA MB BCh MRCP (Cardiff).—A correlated investigation of the functional analysis of the stomach contents with the clinical type and course of disease in rheumatic children. £25.

DECK ELDER WILLIAM STEWART MA DSc MD Ch.B. FRCR Edg. (London).—The physiology and pathology of the uterocervical pressure. £70.

HOLMES ERIC GORDON MA MB BCh (Cambridge).—The metabolism of brain tissue. £50.

CROWDER GRAY PASCOE MSc MRCS LRCP (London).—The nervous control of the suprarenal gland. £25.

BURNETT WILLIAM ANDERSON M.B. Ch.B. DSc (Glasgow).—The investigation of changes in electrical reactions in nerve and muscle employing the accurate method of rhodopa and chro. £20.

MACKAY IAN LINDSAY B.Sc. MD Ch.B. (Wolverhampton).—The multiviscous variation in cellular of the organic and inorganic constituent of the blood in general anaesthesia. £20.

##### The Membership of the Association

We are glad to be able to announce that the membership of the Association is now over 33,000.

### THE ANNUAL EXHIBITION OF SURGICAL INSTRUMENTS, APPLIANCES, DRUGS, FOODS, ETC

(Continued from p. 101)

#### Ophthalmic Instruments

A very interesting and educative display was made of ophthalmic instruments by Theodore Hambro Limited. Only one or two of the many instruments can be selected for mention. One was the new Worth amblyoscope with original pictures, another the Lister perimeter and scotometer, which has lately been improved in several ways. There were numerous ophthalmoscopes, one to which special attention was directed being a student's luminous ophthalmoscope convertible to a non-luminous pattern. The ophthalmic drawings and lantern slides of the fundus and of external diseases, the work of a special staff of draughtsmen were again a feature.

The large exhibit of John Weiss and Son Limited may be placed under this heading because although it included much that was of interest from the point of view of general surgery it had also a very distinctive collection of ophthalmic instruments. Among these were Snelair's instruments for intracapsular extraction of the lens, Harrison Butler's strabismus hook and combined muscle clamp and Maddox's lacrimal syringe. Another exhibit in this section was the finger-grip attachment in stainless steel applied to iris capsule, and fixation forceps. There was a good collection also of ophthalmoscopes with prism reflector also of test types and of coloured test objects for charting fields. Among the general surgical instruments shown by this firm mention should be made of De Martel's clamp for abdominal surgery and various patterns of forceps, gouges, and chisels.

#### Acoustic Instruments

Improvements in aids for the deaf seem to be all in the direction of concealment. It is curious that while no one is ashamed of wearing glasses—indeed, the "tortoiseshell" frames rather emphasize the requirement—people seem to be afraid of the presence of any instrument which would indicate that their hearing is subnormal. The latest electrical aid shown by General Acoustics Limited, was "shell'con," an extremely small instrument the battery quite a midget, and the earpiece worn without a head band about the size of a farthing the entire contrivance weighed only a few ounces. Another feature of interest here was a testing set for eight different types of microphone to enable instruments to be built up to suit the particular condition.

R. H. Dent again showed his "ardente" series, including on this occasion a "wrist-watch" instrument. The contrivance is worn most inconspicuously on the wrist as if it were a watch, and comes into action immediately upon a

Chemical and Pharmaceutical Preparations

Of the exhibit of another Edinburgh firm, J F Macfarlan and Company, we had something to say in describing their ligatures. Among their other chemical manufactures was opiodine, which is a standardized preparation of the alkaloids of opium, also anæsthetic ether and chloroform, and a range of pharmaceutical chemicals, including salicin.

The stand of Parke Davis and Company contained samples of many preparations from this firm's laboratories in Middlesex. The eye was first taken by a range of gland products in tablet form, including thyroid and pituitary. A preparation of pituitary was shown for which it is claimed that it contains a minimum of protein matter and is stable. Adrenalin appeared in the well known 1 in 1,000 solution. Among the antitoxins and serums exhibited was the concentrated streptococcus antitoxin for scarlet fever, supplied in 10 ccm bulbs for treatment and 25 ccm for temporary immunization of contacts. The diphtheria toxin for the Schick test and heated toxin for use as a control also figured among the exhibits, and a new introduction was intestinal vaccines for school children. These well known drugs of an older much discussed era—those of the typhoid, and vermin—again appeared in the stand along with some later ones for which the stand was also prepared.

**Exhibition**

deformans and in syphilis and gonorrhoeal complications. Demonstrations of the Schering "conglobation test" for syphilis and several others were given.

Another series of products illustrating the resources of Evans, Sons, Leichenberg & Co. was given.

Genutasau, Limited, in addition to their sanato-gen tonic food and other preparations, showed a series of detoxicated vaccines, declared to be from fifty to one hundred times less toxic than ordinary vaccines, and consequently suitable for administration in much larger doses and imparting greater immunity. Among the newest introductions were antiviral vaccines (local immunity) for skin application, and a vaccine throat spray for coryza.

A large and varied chemical exhibit was shown by F. H. Spicer and Company, who are the distributors in Great Britain for laboratories abroad. Attention was drawn principally to a bactericidal emulsion, "morbact," presenting the *B. acidophilus* in a suitable form and concentration for acting bactericidally on the pathological organisms of the intestinal canal. Other preparations shown were metaphen, an organic mercury compound, cideidin, containing 15 per cent of available iodine in combination with lime and starch, and butyn, the local anesthetic, all bearing the name of the Abbott Laboratories, Chicago. Another exhibit here was the troupelet tablets, in which phenacetin, acetyl-salicylic acid, and codain are combined with a trace of Homburg salt. A large number of Homburg preparations, including the salts prepared from the spring water shown at Wiesbaden, or liquid solutions in which various products to which Boots Pure Drug Company's name is attached, such as salicylanilide, or liquid salicin in which salicylic acid is dissolved, are also shown.

How the pharmacopoeia can be given sweet flavor and fragrance was demonstrated by Oppenheimer, and Company, Limited. Hero was an aerosol vaporizer for reducing all liquids to invisible mist and various tablets and containers for insulating mist into the system in the least obvious and most agreeable way. Among the many preparations were milk, magnesium hydrate in semi-colloid condition. An interesting exhibit was the oxygen generator in the shape of an instrument for the evolution of oxygen gas, 99 per cent purity, from chemical cubes, in the same manner acetylene gas is generated from calcium carbide. Arrangement was offered only for emergency, not to distill cylinders.

Petrolagum, a palatable emulsion guaranteed to contain 65 per cent pure medicinal paraffin, with agar as the emulsifying agent, was shown by the firm of the name. A demonstration was given of the stability of the emulsion as compared with ordinary coloured water, and in addition to the raw material, test vials in which petrolagum is issued were exhibited, namely, plain, with phenolphthalein, all alone, and sweetened.

Another stand devoted to an intestinal lubricant, that of Kaylene, Limited. Kaylene is a colloidal form of aluminium silicate, and was shown also as Kaylene.

and again with a certain proportion of phenolphthalein to reinforce action in obstinate cases of constipation. The firm also showed a highly refined liquid paraffin prepared with a raspberry flavour for the use of children.

Nujol was seen again at the stand of the Anglo-American Oil Company, Limited and appeared also in the form of a pleasantly flavoured agar emulsion containing 50 per cent of the nujol to those with a palate too sensitive to the plain preparation. Hero also was to be seen mistol a combination of menthol, camphor, and eucalyptol in pure mineral oil, offered for its soothing and antiseptic properties when brought by means of an atomizer into contact with the mucosa of the nose and throat. The firm also showed a skin-killing spray under the name of Nit.

Gland products were shown in considerable variety at the stand of G. W. Curriel Company, of New York, who a London agents are Brooks and Warburton, Limited. One of them was boronate for the treatment of irregularities of menstruation. This and other products were offered to the profession with the assurance that they were made from the fresh glands of healthy food animals in the firm's own laboratories, and that every substance for which there is a recognized chemical or biological assay is analysed and standardized, while for the products in which an active principle has not been discovered the firm's chemists have set up certain standards based upon analytical determination to which every lot of glands must conform.

Another range of American gland products appeared at the stand of Armour and Company with respect to whose glandoid series it was stated again that only glands of maximum potency from fresh material obtained in the firm's own abattoirs adjoining the laboratory were employed. Attention was drawn to specimens of actual glands preserved in their natural colours, particularly posterior pituitary lobes. A non-boilable catgut ligature was also exhibited here.

The Ichthol Company showed the sulphur preparation of that name obtained from the quarries at Sceteld in the Tyrol. Literature was distributed recounting the romantic story of ichthol, which by the way, bears a misleading name, for the idea that it comes from fossil fish has been long since exploded. The peddling of the oil in the Tyrol has been going on for hundreds of years, but the use of ichthol as a recognized substance in medicine, especially in dermatology, dates back only to the last generation. Among the newer preparations shown was ichthargan, which is a compound of ichthol with silver ichthoform, a product of the reaction of ichthol with formaldehyde and ichholan, combining vaseline and linoline with ichthol.

The exhibit of Matthews Laboratories, Limited concentrated on digitalis which was shown in "Hatcher cat-unit." The cat-unit of digitalis introduced by Hatcher and Brodie in 1910, is the weight or the lethal dose of the dry drug in a cat when a solution is slowly given by intravenous injection. An interesting feature of the stand was the actual plants of *Digitalis purpurea* in flower.

Andrews liver salt, a pleasant-tasting saline aperient, was the exhibit of Scott and Turner, Limited. It was made up in two sizes, 4 oz and 8 oz in cylindrical tins. Sal hepatitis another well known effervescent saline combination, was shown by the Bristol Mills Company, and this firm also exhibited a dentifrice the ipana tooth paste for which antiseptic properties were claimed. Calcium salt was shown by the Sandoz Chemical Works under the name of calcium Sandoz and was recommended for its easy assimilation. Other preparations at the Sandoz stand were allitrim and calamine tablets, fermergin (alkaloid or ergot or rye) and seilgren (glucose idol or squill).

Among the many exhibits of the Hoffmann La Roche Chemical Works was isacen a synthetic aperient. Another preparation here was somnifine a liquid hypnotic for administration orally or by intramuscular or intravenous injection recommended by the firm for the commencement of anaesthesia and for reducing the quantity of inhalation anaesthetic to a minimum.

A very large number of pharmaceutical preparations were shown at the stand of the Anglo-American Pharmaceutical Company, Limited. These included agar-agar (agar agar with lactic acid ferments of Bulgarian milk with phenolphthalein), betol oil (a compound liniment containing the methyl ester of salicylic acid in combination with menthol), and various other medicaments and ointments, syrups, and powders.

The Anglo-French Drug Company and Modern Pharmaceuticals, Limited, combined at a stand, where they showed a large series of preparations, among them one called adrepato for the treatment of haemorrhoids, creosal svrup for respiratory troubles, orargol, a colloidal gold and silver antiseptic, and sularsenol for the treatment of syphilis. Some radio active substances were also shown here, including mesothorium and a preparation combining this element with the properties of colloidal copper. The Inhaling Drug and Apparatus Company, Limited, again showed the Spiess-Drager drug nebulizing and inhaling apparatus and inhalants.

Finally came the compounds of the house of Jeyes, including the many different forms of cylin, also jersol and branaleano, the latter a 33 per cent solution of glycol borate in glycerin, coloured with tincture of rubin, and offered as an antiseptic and sedative in the treatment of ulcerated conditions of the throat and in other affections of the mucous membrane.

One firm only appeared to specialize in toilet preparations—namely Kolynos, Incorporated. It showed dental creams and powder, including liquid kolynos for use as an antiseptic mouthwash, gurgle, or spray.

(To be continued)

## Meetings of Branches and Divisions

### BOMBAY BRANCH

The first meeting of the new session of the Bombay Branch was held at the Pathological Laboratory of the Grant Medical College on June 25th.

Miss BAROUR opened a discussion on anaemia in women in Bombay. She stated that the type of anaemia was more with fewer oedema diarrhoea and vomiting. Delivery premature or otherwise did not always lead to improvement. The blood picture was usually like that in pernicious anaemia. Less than half of these patients' serums were positive to the Wassermann test. Signs of haemolysis especially in the liver and spleen were found at necropsy. She thought the condition might have an infective origin or be originated by some chemical toxins from the intestines or some type of antinuclear or deficiency in assimilation of iron. It might be related to the toxæmia of pregnancy. She ended with a few words on treatment.

Dr PADNANI said that patients with sprue might start with diarrhoea and after improving temporarily die from anaemia. Severe secondary anaemia might closely resemble this type of anaemia. The points of distinction in pernicious anaemia were constant signs of haemolysis and absence of hydrochloric acid from the gastric contents. In sprue the van den Bergh reaction was indirectly positive.

Miss TURNER WATT stated that in Mysore two decades previously she had seen similar cases of anaemia in pregnant women. Induction of labour in the cases was not always successful. She suggested complete rest, the administration of calcium iron and arsenic by injection and cardiac stimulants in the treatment with transfusion whenever possible and feasible.

Lieut Colonel HAMILTON reported that such cases were also met with in Calcutta. Goones and one Mohammedan were specially affected. He was convinced that it was restricted to pregnancy and differed from other anaemia. He had never seen a case in Poona.

Lieut Colonel F. P. MACKIE of the Haifkin Institute who formerly agreed that sprue and pernicious anaemia were definitely separate diseases.

On the motion of Colonel Mackie seconded by Dr M. BAROUR it was unanimously resolved.

That the Council of the British Medical Association in London be asked to consider the question of giving a grant towards the inquiry into the causation of the anaemia of pregnancy which is cramped for want of funds.

It was stated that the inquiry which was under the direction of Miss Margaret Barour was being carried on at the Haifkin Institute with the aid of a grant from the Indian Research Fund Association.

Lieutenant BENJAMIN described a case of pernicious anaemia which showed the typical blood picture and was steadily going downhill in spite of treatment with haematinics and dilute hydrochloric acid. Auto erythropoiesis resulted in rapid improvement and the patient's red blood cells rose from 7,000 to 2,275,000 per cubic millimetre.

Dr P. T. PATIL and Dr KHANSAKA continued the discussion.

## Naval and Military Appointments

## ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders C H M Gimlette to the *President* additional, for three months post graduate course appointment to the *Suffolk* cancelled H E Y White CVO, OBE, to the *Victory*, additional, for R N Hospital, Haslar (temporary, superannuated) T C Creaser to the *Nelson* on commissioning

Surgeon Lieutenant Commanders A W McRorie to the *President*, additional, for three months post graduate course F C Hunot to the *Barmouth* W E Heath to the *Esguard*, L S Goss to the *Suffolk*, J C Brown to the *Vivid* for *Rodney*

Surgeon Lieutenants N A Dickinson to the *Hermes* L P Spero to the *Adamant*, P J A The O'Rourke to the *Pembroke* for the *Centurion* for trials D V Beaton to the *Pembroke* for R N Hospital Chatham, J I Malone to the *Nelson* on commissioning W H Briddfield to the *Tamar*, additional

## ROYAL ARMY MEDICAL CORPS

Lieut Colonel J H R Winder, DSO, retires on retired pay. The following Captains to be Majors: T McNair, D H Murray, E Underhill (prov.), R A Mansell, MBE, J T Scroggie. The following Lieutenants to be Captains: C W Greeway, C R Christian, R J Rosic, J Huston, E G Dalziel, MC

## ROYAL AIR FORCE MEDICAL SERVICE

Group Captain C E C Stanford DSO to Headquarters, Coastal Area. Wing Commander H M S Turner, MBE, to Headquarters, Fighting Area, Uxbridge.

Squadron Leaders T J Kelly MC to Headquarters Inland Area, Stanmore V R Smith to No 5 Flying Training School, Sealand, E A H Gray to Home Aircraft Depot Henlow. Squadron Leader F C Jobson relinquishes his commission on completion of service.

Flight Lieutenant O S de Segundo, OBE, VD to Inspector of Recruiting on appointment to a temporary commission. Flying Officers L P Carroll to R A F Station, Worthy Down G W McMeer to R A F Depot, Uxbridge.

## VACANCIES.

ADLEY-TWITCH INFIRMARY AND CARDIGANSHIRE GENERAL HOSPITAL—House Surgeon (male) Salary £200 per annum

BATH ROYAL MINERAL WATER HOSPITAL—Resident Medical Officer (male, unmarried) Salary at the rate of £130 per annum

BEAUFORT COURT HOSPITAL—Assistant House Surgeon (male, unmarried) Salary at the rate of £130 per annum

BIRMINGHAM CITY—Medical Officer of Health Salary £1,800 per annum

BIRMINGHAM GENERAL HOSPITAL—Medical Registrar and Resident Medical Officer Salary £155 per annum

BIRMINGHAM UNION—Medical Superintendent of the Selly Oak Hospital and Medical Officer of adjoining Institution Salary £1,000 per annum, rising to £1,200

BOLTON UNION—Second Assistant Medical Officer (male) at Townley's Hospital Salary at the rate of £225 per annum

BOOTH BOROUGH HOSPITAL—(1) Senior Medical Officer (2) Two Junior Medical Officers (males) Salary £150 and £125 per annum respectively

BRIGHTON HOVE AND PRESTON DISPENSARY AND HOVE HOSPITAL—Honorary Surgical Registrar to the Western Branch of the Dispensary

Bristol General Infirmary—(1) Two House Physicians (2) House-Surgeon (3) Resident Obstetric Officer (4) House Surgeon to Special Departments (5) Casualty House Surgeon. Salary at the rate of £80 per annum each rising to £100 in the event of a second appointment

CLIFF ROYAL INFIRMARY—Ophthalmic House Surgeon Salary £75 per annum

CUMMERTON JOINT COUNTIES MENTAL HOSPITAL—Senior Assistant Medical Officer (male unmarried) Salary £450 per annum

CERNAGOSHIRE AND ANGLESEA INFIRMARY, Bangor—House Surgeon Salary £200 per annum

CHESTER ROYAL INFIRMARY—Honorary Radiologist Honorarium 300 guineas per annum

CITY OF LONDON UNIVERSITY HOSPITAL City Road E.C.1—(1) Registrar Honorarium £100 per annum (2) Honorary Dental Surgeon

DARLINGTON GENERAL HOSPITAL—House Surgeon (male) Salary £150 per annum

DUMFRIES CRITCHON ROYAL MENTAL HOSPITAL—Chemical Pathologist Salary £400 per annum increasing to £700

EAST AFRICAN MEDICAL SERVICE—Medical Officer as an Assistant Bacteriologist Salary £500 per annum rising to £840, and thence subject to efficiency bar to £920

GUILDFORD BOROUGH—Medical Officer of Health and School Medical Officer to the Borough Medical Officer of Health for the Rural District and Medical Officer to the Guildford, Godalming and Woking Joint Hospital Board Salary £800 per annum and £100 travelling allowance

HARPER ROYAL HARPER INFIRMARY—Resident Surgical Officer (male, unmarried) Salary £250 per annum

HOVE LIDY CHICHESTER HOSPITAL—(1) House Physician (2) Junior House-Physician Salary at the rate of £100 and £50 per annum respectively

KILGERSON HULL INCORPORATION FOR THE POOR—Assistant Resident Medical Officer for the Institution and Infirmary Salary £300 per annum

KNOLE MENTAL HOSPITAL Farnham—Senior Assistant Medical Officer (male) Salary £700 per annum rising to £800

LIVERPOOL EAR, NOSE AND THROAT INFIRMARY—Honorary Assistant Surgeon to the Ear, Nose and Throat Department

LIVERPOOL AND SAMARITAN HOSPITAL FOR WOMEN—House Surgeon Salary at the rate of £100 per annum

LIVERPOOL STANLEY HOSPITAL—(1) House-Physician (2) House-Surgeon (male) Salary at the rate of £100 per annum

MANCHESTER HOSPITAL FOR CONSUMPTION AND DISEASE OF THE THROAT AND CHEST—Resident Medical Officer for the Inpatient Department

Middle Central Hospital Greenwich Road S.E.10 Inpatient Honorarium 52 guineas per annum

NEWCASTLE UPON TYNE UNIVERSITY OF DURNING COLLEGE OF MEDICINE—Professor of Anatomy

NEWCASTLE CITY—Assistant School Medical Officer (temporary) Salary 11 guineas a week

NEWBURY JENNY LIND HOSPITAL FOR CHILDREN—Resident Medical Officer (male) Salary at the rate of £120 per annum

NOTTINGHAM CHILDREN'S HOSPITAL—Resident House Physician (woman) Salary at the rate of £150 per annum

NOTTINGHAM GENERAL HOSPITAL—Resident Casualty Officer (male) Salary at the rate of £200 per annum

ORAGO UNIVERSITY, New Zealand—Professor of Dentistry Salary £100 per annum

PLYMOUTH SOUTH DEVON AND LAST CORNWALL HOSPITAL—Casualty House Surgeon

RICHMOND ROYAL HOSPITAL Surrey—Assistant House-Surgeon (male) Salary at the rate of £100 per annum, rising to £150 on appointment as Senior after six months

ROMFORD UNION—Resident Second Assistant Medical Officer at Old Church Hospital (unmarried) Salary £250 per annum

ROYAL FREE HOSPITAL Gray's Inn Road, W.C.1—House-Physician to the Children's Department

ROYAL NORTHERN HOSPITAL, Holloway Road, N.7—House-Surgeon Salary at the rate of £70 per annum

RUGBY HOSPITAL of St. Cro's—Senior and Junior Resident Officers (males) Salary at the rate of £150 and £100 per annum respectively

STAMPA'S HOSPITAL SOCIETY—Assistant Medical Officer at King George's Sanatorium for Sailors, Liphook, Havts Salary at the rate of £200 per annum

SHEFFIELD ROYAL HOSPITAL—(1) Honorary Assistant Ophthalmic Surgeon. (2) Honorary Physician

STOCKTON INFIRMARY—Resident Medical Officer (unmarried) Salary £150

STOCKTON AND THORNHALL INFIRMARY—House-Surgeon (male) Salary £75 per annum

WEIR HOSPITAL, Grove Road Balham S.W.12—Senior and Junior Medical Officers (male, unmarried) Salary £150 and £100 per annum respectively

WEST LONDON HOSPITAL, Hammersmith Road, W.6—(1) House Physician (2) Two House-Surgeons (males) Salary at the rate of £100 per annum

WINDFIELD ORTHOPEDIC HOSPITAL, Headington, near Oxford—Secretary and Workshops Manager Salary £550

This list of vacancies is compiled from our advertisement columns where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

### British Medical Association

#### CURRENT NOTES

##### Annual Conference of Local Medical and Panel Committees.

THE annual conference of representatives of Local Medical and Panel Committees will be held in the Great Hall British Medical Association House, Tavistock Square, London on Thursday, October 20th next, under the chairmanship of Dr F K Le Fleming (Wimborne Dorset). The report of the Insurance Acts Committee for the past year has been circulated to Local Medical and Panel Committees and is published in this issue of the SUPPLEMENT. All motions for inclusion in the provisional agenda of the conference should be in the hands of the Medical Secretary not later than Monday September 19th. Motions or amendments for the final agenda must be received by Monday October 10th. The final agenda will be issued on Thursday, October 13th.

##### Election of Direct Representatives upon Insurance Acts Committee and Scottish Subcommittee.

Nominations may now be made for the election of twenty-three direct representatives upon the Insurance Acts Committee for the session 1927-28. Forms have been circulated to Local Medical and Panel Committees and must be returned so as to reach the Medical Secretary not later than Monday, October 10th. Nominations may also be made for the election of eight direct representatives on the Insurance Acts Subcommittee (Scotland)—four by Scottish County Panel Committees and four by Scottish Burgh Panel Committees. The completed forms must be returned by Monday, October 10th.

#### ANNUAL REPRESENTATIVE MEETING

##### Puerperal Pyrexia Regulations

By the mischance of the separation of a sheet of "copy" the remarks made by Dr W A M SWAN (St Pancras) at the Representative Meeting on July 18th in moving the resolution regarding payment to the general practitioner for consultations under the Puerperal Pyrexia Regulations, were omitted from the report. The text of the St Pancras resolution was given (SUPPLEMENT, July 30th, p 58) and the fact that Dr Swan moved it. The report should have added that Dr Swan, in proposing the resolution said that it was usual in the case of a private consultation for the general practitioner to charge a fee since it was an extra service outside his actual attendance

on the case, and took up an appreciable amount of his time. The history etc of the case had to be prepared by him, and the practitioner spent a longer time in consultation than did the consultant, also he was responsible for carrying out any recommendations the consultant might make. If general practitioners were compelled to meet consultants without fee in cases of puerperal pyrexia, the principle might be established whereby other consultations of a similar nature would be forced upon them. The question of anaesthetics came up. Would the general practitioner be expected to give the anaesthetic should it be necessary? The motion furnished an opportunity to carry into practical effect in terms of remuneration the sympathetic references to general practitioners which had been made at that meeting.

##### Representatives' Excursion to the Scott Country

Some of the representatives who took part in the excursion to the Scott country as recorded in the SUPPLEMENT of July 23rd (p 52) expressed a desire to have picture postcards commemorative of it. Dr Samuel Davids (Mausehold Kelso) has been good enough to arrange to supply a set of four postcards: two are views of Floors Castle, one of Dryburgh Abbey and one of Galashiels war memorial. He will send the set, post free, to any representative on receipt of 6d.

To the list of representatives and delegates from Oversea Dominions who were presented to the President on the occasion of the Annual General Meeting (SUPPLEMENT July 23rd p 50) should be added the name of Dr B T ZWAR Vice-President of the Victorian Branch and its representative and delegate.

#### Association Notices

##### BRANCH AND DIVISION MEETINGS TO BE HELD

**KENT BRANCH**—The Kent Branch will meet at the British Legion Village Preston Hall, Aylesford near Maidstone on Thursday August 25th at 3 p.m. at the invitation of Dr J B McDougall the Medical Director. The industries carried on will be seen and Dr McDougall will give clinical notes of cases of interest. Tea will be provided.

**SOUTH BRANCH BRIGHTON DIVISION**—A meeting of the Brighton Division will be held at the Queen's Road Dispensary on Thursday September 1st at 3.30 p.m. report of representatives on Annual Edinburgh report of Secretary on Committee on Education of Edinburgh Charities Committee any other business. Address by Dr Bond, CBE, on his visit to Paris for the Paul Cullenary.

was for very many years the directly elected representative upon the Committee of Group C (Staffordshire and Shropshire) and always how'd a very keen interest in the welfare of insurance practitioners. Besides his membership of the Insurance Acts Committee he was a member of the Central Council of the Association and of several Committees and was Chairman of the Staffordshire Local Medical and Panel Committee.

#### STANDING ORDERS OF CONFERENCE OF LOCAL MEDICAL AND PANEL COMMITTEES

9 A strict interpretation of the existing Standing Order (xiii) does not allow of a motion for the revision of a resolution of a previous Conference being submitted by the Insurance Acts Committee. It is therefore considered that the Standing Order should be amended so as to make this possible.

The Committee recommends —

(Recommendation A) That Standing Order (xiii) be amended so as to read as follows —

(xiii) Revision of Resolutions.—A motion to rescind any resolution of a previous Conference shall not be in order at any subsequent Conference unless notice is given in the Provisional Agenda either by the Insurance Acts Committee or by the Local Medical and/or Panel Committees of at least five separate areas. In the latter case the notice must be received by the Insurance Acts Committee at least four calendar days before the date fixed for the issue of the Provisional Agenda.

#### CONSTITUTION OF INSURANCE ACTS COMMITTEE

10 The Committee has considered Minute 11 of the last Annual Conference dealing with the grouping of Local Medical and Panel Committees for the election of direct representatives upon the Committee and requesting the Committee to arrange if necessary for an alteration of its constitution so as to provide for an increase of not more than two additional direct representatives. This resolution was passed by the Conference mainly because of the desire of Cheshire which is at present bracketed with the whole of Wales as a Group to be allowed to join an English Group.

11 The Committee has had its consideration of the matter upon the number of insurance practitioners in each area on the 1st January 1927 and finds that the majority of Groups are at present represented on the Committee by one member for about 1,000 insurance practitioners. If Cheshire were removed from Group E so as to leave Wales and Monmouth a Group by itself this Group would be represented by two members for 1,314 practitioners (1 in 657) involving considerable over-representation as compared with other Groups. Furthermore it would be very difficult to place Cheshire equitably with any of her existing Group. Any rearrangement of the Grouping by reassigning the Group either with or without one or two additional members between them seems to be incompatible with any convenient territorial arrangement and would seem to cause at least as many inequities as would be removed. The Committee is therefore of opinion that the grouping should remain as at present.

(Recommendation B) That the number of direct representatives upon the Insurance Acts Committee and the grouping of areas for the purpose of their election remain as at present.

#### II—AMENDMENT OF MEDICAL BENEFIT REGULATIONS

12 At the last Annual Conference the Committee submitted to the Conference recommendations dealing with the following matters and received the approval of the Conference thereto —

(i) Charging of Fees (Minute 46) (ii) Notification of Right of Appeal to Minister against Decision of Insurance Committee (Minute 50) (iii) Withholding of Grant by Minister in case of alleged failure to keep proper records (Minute 54) (iv) Notice of Variation of Terms of Service (Minute 55) (v) Cases of doubt as to title to Benefit (Minute 56) (vi) Supply of drugs in cases of persons making own arrangements (Minute 74) (vii) Issue of Prescriptions for the purpose of drug testing (Minute 77) and (viii) Emergency Treatment for Temporary Residents (Minute 79). The Minister of Health was duly informed of the above mentioned resolutions of the Conference which in order to give effect to them necessitated alterations in the Medical Benefit Regulations or Distribution and Allocation Scheme. The Ministry stated however that in view of the alterations which would probably also be required to be made later in connection with other matters under discussion including the disciplinary procedure under the Act any general amendment of the Medical Benefit Regulations would be better postponed for the time being.

#### III—DISCIPLINARY PROCEDURE

13 A number of resolutions were passed by the last Annual Conference dealing with the disciplinary procedure under the National Health Insurance Act. The Conference also had before it a letter upon the subject from the Ministry of Health dated 9th October 1926 (M 16) in which it was suggested that arrangements might be made whereby in cases raising the question of the exercise by an insurance practitioner of reasonable care and skill in the treatment of an insured person the Minister might have available the advice of medical practitioners who were not officers of the Ministry. The principal resolution of the Conference was Minute 13 which gave the Insurance Acts Committee authority to negotiate with the Ministry upon the proposal contained in the above mentioned letter from the Ministry. Arrangements were accordingly made for a discussion of the whole question between the Insurance Acts Committee and representatives of the Ministry. This took place on November 30th 1926 and a full report of the proceedings was published in the Supplement to the B M J of December 11th 1926.

14 Arising out of this meeting with the Ministry it was arranged that the discussion should be continued at a subsequent date by a smaller conference representative of both sides and a meeting was held on December 9th 1926. At this further meeting representatives of the Insurance Acts Committee stated that there were aspects of the disciplinary machinery question other than the proposed professional panel which it was possibly worth considering with a view to ascertaining whether or not any part of the present machinery could be modified so as to obviate many of the complaints put forward by the profession and it was ultimately agreed to postpone further discussions until the Insurance Acts Committee had reviewed the whole of the disciplinary machinery drawn up its views as to the amendments if any which it desired to be made in the machinery and submitted them to the Ministry with a view to further joint meetings being arranged to discuss them in detail.

15 The Insurance Acts Committee has therefore considered very fully all the disciplinary provisions contained in the present Medical Benefit Regulations and has submitted its suggestions to the Ministry both in correspondence and in conference. In formulating its proposals the Committee had in mind two principles: first that the responsibility of the Minister of Health to Parliament for the efficiency of the medical service requires that any disciplinary machinery must be such that it can be absolutely relied upon to cure that complaints shall be investigated fairly and judicially so that the Minister can with confidence promulgate his decision; and second that in the investigation of a complaint the tribunal hearing the evidence should be made responsible for deciding on the recommendation and either that such recommendation should not be varied by individuals or bodies who have not had the opportunity of hearing the evidence or in the alternative that any such variation should not become operative without full information being given to the person complained against as to any or all recommendations made in his case by any of the various bodies through whose hands it has gone in order that he may exercise his judgment on the question of appeal.

16 The Committee recognizes that it would be inconsistent with constitutional practice for the Minister to attempt to divest himself of his responsibility to Parliament for the maintenance of a medical service to which grants are made from public funds but at the same time the Committee considers it essential that before making a decision in disciplinary matters the Minister should be advised in a manner different to that which has existed up to now.

17 The following are the proposed modifications of the procedure for dealing with complaints against insurance practitioners agreed to between the Insurance Acts Committee and the Ministry —

#### Withholding of Grant Cases Advisory Committee to the Minister

(i) The Committee has obtained an assurance from the Minister to the effect that before coming to a decision to withhold grant in any case in which the practitioner is charged with negligence he will seek the advice of practitioners or standing to be selected possibly in rotation from a panel nominated for the purpose by the Insurance Acts Committee. Three of these practitioners chosen from this panel will sit with the Chief Medical Officer of the Ministry as Chairman and two other medical officers of the Ministry as a joint advisory committee to the Minister. This joint advisory committee will make before the report of the Medical Service Subcommittee the resolution of the Insurance Committee as well as the report of the doctors' oral representation in the case and has the right to make oral representations or his written representations if he has chosen to adopt that course.

(ii) This new joint advisory committee will act in all cases in which the practitioner is charged with negligence, whether the charge is one of failure to exercise reasonable skill and care in treatment, or of failure to visit or of failure to order or supply some medicine or appliance which it is alleged, ought to have been ordered or supplied or of failure to discharge such obligation as is imposed upon him by the regulations to assist a patient to obtain necessary treatment which it was beyond the practitioner's province to provide. These are practically all the cases except fee charging in which a complaint is made by or on behalf of an insured person. Cases of fee charging and certification would not come before this joint advisory committee, unless some professional question was also involved.

(iii) The Minister has also agreed that any regulations which will have to be framed to meet this new proposal shall be framed so as to leave him a discretion to refer to this joint advisory committee any other disciplinary case in regard to which its advice would be of assistance, and he has intimated that it is his intention to exercise this discretion liberally. This joint advisory committee will have to advise on the question whether the facts found amount to a failure to provide proper treatment and also to advise as to the appropriate penalty, and should the committee be unable to arrive at a unanimous conclusion the non-official members that is those chosen from a panel of doctors nominated by the Insurance Acts Committee, will have the right to submit to the Minister a separate report.

(iv) The Minister has also agreed to associate one of the non-official members of the advisory committee with the official officers of the Ministry in the hearing of oral representation in those cases which fall to be referred to the joint advisory committee, whether these representations follow on a report of a Medical Service Sub-Committee and the recommendation of the Insurance Committee or upon the report of an Inquiry Committee appointed under Part VI of the Regulations, as a result of which the facts found by that Committee do not appear to the Minister to justify the removal of the respondent doctors from the medical list but the question of withholding grant is under consideration.

(v) With regard to the hearing of appeals under Article 35 of the Regulations, the Minister has agreed to the appointment of a non-official member of the advisory committee to sit with the officials hearing the appeal, in the capacity of an expert assessor, with liberty to put such questions as seem to him necessary to elucidate any medical issues involved in the case.

(vi) It will be appreciated that an appeal differs entirely from oral representations and is a party case in which both parties may be and often are legally represented. The issues are questions of fact or of law, or both and the doctor concerned if he is the respondent in the appeal, has not the same opportunity as in the case of oral representation of putting forward considerations in mitigation of penalty. The persons hearing the appeal have no jurisdiction to give any decision, their duty being to find the facts and to report them to the Minister. The Insurance Acts Committee has however, expressed the wish that the respondent doctor should have a further opportunity where an appeal is decided against him of making oral representations in mitigation of penalty and to this the Minister has offered no objection, although it must be appreciated that it would necessarily involve the attendance of a doctor on a second occasion.

(vii) Alternatively it would be administratively preferable to allow any plea in extenuation to be heard at the end of the hearing of the appeal, but it is recognised that this may embarrass the doctor's representative in his conduct of the respondent's case, and therefore the Insurance Acts Committee proposes to take legal advice before deciding on the procedure which should be adopted in this particular connection.

(viii) The Minister has further agreed to a non-official member of the advisory committee being associated with the official officers of the Ministry in hearing oral representations in cases which do not come within the scope of the advisory committee, e.g., cases of improper fee charging and certification cases.

(ix) Other directions in which alterations and improvements have been suggested by the Insurance Acts Committee, and to which the Minister has given his approval, are—

#### *Charges against Practitioners to be specific*

(x) Cases have occurred which have caused great local resentment in which the Clerk of the Insurance Committee has insufficiently set out the nature and ground of a

complaint which has been made against a practitioner, thus leading the Medical Service Sub-Committee into a sort of roving enquiry. The Committee considered that the Clerk of the Insurance Committee should be required to give the respondent practitioners a clear indication of the breach of the terms of service which they are alleged to have committed.

(xi) The Minister has expressed his willingness to issue a circular to Insurance Committees urging the need for exercising the utmost care to see that when practitioners are summoned to appear before a Medical Service Sub-Committee the nature of the complaint is set out as clearly as possible. At the same time the Committee will be advised that if in the course of a hearing the respondent doctor complains that a new issue has been raised, of which he has not been given notice, and he asks for an adjournment this application should be allowed.

#### *Position of Insurance Committee Clerk in Medical Service Cases*

(xii) Difficulties have been experienced in areas where the Clerk of the Insurance Committee regards it as his duty to prosecute the respondent doctor, and to meet this difficulty the Minister has agreed to advise all Committees to leave the conduct of cases referred to the Medical Service Sub-Committee, either by the Insurance Committee or the Medical Benefits Sub-Committee, in the hands of the Chairman of the Medical Service Sub-Committee and to limit the functions of the Clerk in this relation to a statement of the facts which have been brought to the notice of the Committee and which that body has instructed him to bring to the notice of the Sub-Committee.

#### *Preparation of Report of Medical Service Sub-Committee*

(xiii) Cases have arisen in which the statement drawn out by the Clerk for the information of the Insurance Committee has been regarded as inaccurate by one or more members of the Sub-Committee. There being no shorthand note there is nothing to appeal to for corroboration except the memories of those who were present. To meet this difficulty the Minister proposes to instruct Insurance Committees to have a shorthand note taken at all hearings of the Medical Service Sub-Committee by the best stenographer on the staff of the Committee. From these notes the Clerk will be required to write up a full memorandum of the case which, when approved by the Chairman, will be circulated as a draft to the other members of the Sub-Committee. If the accuracy of the draft on any material point is questioned by any member the matter must be taken up at the next meeting of the Sub-Committee. If no amendments are suggested, or only small verbal corrections, the memorandum will be accepted as conclusive. The Minister further proposes to instruct Insurance Committees that no report of a Medical Service Sub-Committee should be circulated to the Insurance Committee until it has been submitted to the members of the Sub-Committee present on the occasion in question.

#### *Medical Service Cases where Professional Questions arise*

(xiv) The Insurance Acts Committee considers that it is necessary to secure that in cases in which the Medical Service Sub-Committee has made a finding contrary to the unanimous advice of the medical members of the Sub-Committee on a question regarded by them as being purely professional the fact should be recorded in the report of the Sub-Committee. The Minister has informed the Insurance Acts Committee that he sees no reason why, if the professional members of the Medical Service Sub-Committee unanimously dissent on professional grounds, their grounds for so dissenting should not be recorded in the report.

#### *Recommendations of Medical Service Sub-Committee*

(xv) The Medical Service Sub-Committee in addition to being empowered to submit recommendations in one of the four ways set out in existing Article 30 (2) will also be permitted to recommend either the cautioning or censuring of a practitioner.

(xvi) The Insurance Acts Committee has asked that if and when the Medical Service Sub-Committee recommends the withholding by the Minister of moneys due to a practitioner, it should decide the amount so to be withheld. It is recognised that Medical Service Sub-Committees have already the power to make such a recommendation if they think fit, but the suggestion is that they should invariably do so.

(xvii) The Minister considers that this proposal would occasion considerable difficulty, since although the Medical Service Sub-Committee might be agreed that the

facts found were such as to justify the withholding of money it does not follow that both sides would be agreed as to the amount to be withheld. If the recommendation in regard to the amount to be withheld were adopted by a majority the minority whether it consisted of medical members or of approved society representatives would probably require their dissent to be recorded and the Insurance Committee and subsequently the joint advisory committee would have before them two conflicting recommendations.

(viii) It was also suggested by the Minister that in substance on the formulation of definite recommendations would tend to provoke in some cases an acrimonious debate which would be prejudicial to the relations between the lay and medical members.

(ix) The Minister has however expressed his willingness to issue a circular requesting all Medical Service Sub-Committees to include in their reports a definite recommendation as to the amount of money to be withheld in the agreement of both sides can be secured. Failing unanimity as to the amount the Medical Service Sub-Committee should endeavour to agree upon some form of recommendation which would give some indication of the degree of gravity which in their view attached to the case e.g. by recommending that the amount to be withheld should be substantial or otherwise. In the absence of a recommendation that the amount withheld should be substantial it would be inferred that though the Sub-Committee regarded the facts as found by them as justifying the withholding of money they did not regard the case as one of gravity. The Insurance Acts Committee has accepted these suggestions of the Minister as equitable and largely meeting the point under discussion.

#### Practitioner to be furnished with Report of Medical Service Sub-Committee

(xx) The Insurance Acts Committee was in some doubt as to whether or not the doctor is furnished with the report of the Medical Service Sub-Committee when he is notified of the Insurance Committee's recommendation.

(xvi) The Committee is informed by the Minister that under Article 34 (1) of the Regulations Insurance Committees are required to furnish the doctor with a copy of the report of the Medical Service Sub-Committee and so far as the Minister is aware this practice is invariably followed. It does not appear therefore that any amendment of the Regulations is necessary in this connection.

#### Persons who may appeal

(xxi) The Insurance Acts Committee considered that the right of appeal to the Minister given under Article 34 (1) to any person or society should be limited to any person or society concerned in the particular case.

(xxii) To meet this point the Ministry has agreed to the insertion of the word 'such' before the word 'person' in the 5th line of Article 34 (1) which will then read as follows—

34 (1) The Committee shall inform the persons (including a society) concerned in any investigation by the Medical or Pharmaceutical Service or Joint Service Sub-Committee of their decision in the matter and shall furnish them with a copy of the report of the Sub-Committee and any such person or society aggrieved by the decision of the Committee shall be entitled to appeal to the Minister by sending to the Minister notice of appeal within one month from the date on which notification of the decision was received.

#### Definition of Minister's Power under Regulation 36

(xxiv) Regulation 36 gives to the Minister power to withhold money from an Insurance Committee and so from an individual practitioner if he is satisfied whether on consideration of the Report of a Medical Service Sub-Committee or a Joint Services Sub-Committee or otherwise that an insurance practitioner has failed or neglected to comply with the terms of service. The Insurance Acts Committee feels that the power thus given the Minister by the words 'or otherwise' is far too wide and asked that the wording be varied so as to limit the power of the Minister to initiate complaints against practitioners to cases of alleged failure to keep adequate medical records to return Form R 2 or to make reports on tuberculosis cases. The Minister agreed to the omission of the words 'or otherwise' subject to the insertion of other words making it quite clear that the Minister has power to withhold the grant after an enquiry under Part VI or Part VII or without any such enquiry in the three classes of cases above mentioned.

#### Definition of Minister's Power under Article 56

(xxv) The Insurance Acts Committee considered that Article 56 should be deleted in order to prohibit the Minister from holding an enquiry in the absence of any representation.

(xxvi) The Minister has expressed his willingness to agree to an amendment of Article 56 so as to provide that his power to order an enquiry without any representations to that effect having been made to him should be limited to cases in which the doctor has already been convicted on a criminal charge.

18 This new procedure set out above to be followed before the Minister makes his final decision is one which is considered by the Insurance Acts Committee to be preferable to allowing the practitioner a right of appeal to the High Courts. Such right of appeal to the High Courts could probably only be obtained if the present disciplinary machinery were done away with and practitioners proceeded against in the first instance in all cases of complaint in the County or Police Courts when a right of appeal to the High Courts would properly follow. The Insurance Acts Committee considers that it is in the interests of insurance practitioners and of the Insurance service that the disciplinary machinery should remain within the four corners of the National Health Insurance Acts. The Committee therefore strongly recommends that the proposed new procedure be given a thorough trial. It is also suggested that if these proposals are approved by the Conference the Committee should agree with the Ministry that there shall not be any further alterations in the Regulations for a period of several years.

19 In conclusion the Committee desires to express its appreciation of the way in which the representatives of the Ministry have met the Committee in dealing with this very difficult question of disciplinary proceedings. It has been evident that the desire of the Ministry was to meet the requirements of the Committee as far as possible and to remove any doubts of practitioners as to the absolute fairness of every part of the procedure.

#### TIME LIMIT FOR COMPLAINTS AGAINST AN INSURANCE PRACTITIONER

20 A matter which has caused a good deal of dissatisfaction on in some areas more than in others is the practice of allowing complaints against practitioners to be considered when the period within which such complaints are required by Regulation 23 (1) to be made has expired. The point was taken up with the Ministry and after some discussion during which varying periods have been considered the Ministry has agreed to accept the proposal of the Insurance Acts Committee that in the case of complaints made after the expiration of six weeks from the event complained of but before the expiration of two months the Medical Service Sub-Committee should have a discretion to investigate the complaint. In the case of complaints made after two months the Medical Service Sub-Committee is to be precluded from investigating the case unless the Minister's approval has first been obtained.

#### IV—MISCELLANEOUS

##### CERTIFICATION AND SICKNESS BENEFIT CLAIMS—CHANGE OF DOCTOR

21 It will be remembered that at the last Annual Conference Sir Walter Kinnear, Controller of the Insurance Department at the Ministry of Health, addressed the Conference upon the serious position in which Approved Societies appeared to be finding themselves owing to the increased claims made upon their Sickness Benefit funds. The Conference instructed the Committee to see what practical steps could be taken to meet the difficulties raised by Sir Walter Kinnear and the representatives present pledged themselves to use their influence locally in order to secure strict adherence to the principles governing certification under the National Health Insurance Act.

22 Immediately after its first meeting subsequent to the Conference the Committee issued a letter (M 23) to Local Medical and Panel Committees drawing attention to the matter and urging upon them the necessity for advising insurance practitioners of the need for strict compliance with the certification rules in order that it could not justly be said that doctors as well as patients were treating National Health Insurance as if it were a form of Unemployment Benefit. Local Medical and Panel Committees were also asked to forward expressions of opinion upon any special cause or causes of increased Sickness Benefit claims on which they might be aware in their own areas. Such expressions of opinion as were received were given full consideration by the Committee and Minute 99 of the last Annual Conference suggests certain restrictions with regard to an insured

person's right to change his doctor, was also taken into consideration. The result of the Committee's full consideration of the matter is set forth in the following communication addressed to the Ministry of Health on January 26th 1927—

British Medical Association  
B.M.A. House  
Law Society, Square  
London W.C.1  
26th January 1927

Dear Sir

Sir, Re: Benefit Claims and Certificates

The Insurance Acts Committee has given careful consideration to the question of certification under the National Health Insurance Act in its relation to Sickness Benefit claims which was the subject of an address to the Annual Conference of representatives of Local Medical and Panel Committees in October last by Sir Walter Kumner, and particularly to the possible relation of the insured claimant for sickness benefit to the condition which allows for change of doctor at any time by insured persons.

With regard to this latter point I am restricted in stating that after a full and frank discussion of the matter is concerned the Committee remains firmly of opinion that the present method of recording of doctor by patient is the ideal principle in any system of national health insurance, and that it would not be advisable to return to the previous arrangement under which insured persons could only claim their medical attendance at home doctor. At the same time the Committee recognises that the additional duties of insured persons in their practitioners compared with their duties as private practitioners necessitate the existence of certain procedures in connection with the principle of change of doctor which are not necessary in private medical practice, and modification of this procedure may be necessary. The Committee submits in this connection the method proposed should be regarded in one of the insured persons should be required to give a statement in writing prescribed way, to give a statement in writing to the Insurance Committee at the time of change of doctor, provided that a person receiving treatment from a doctor should have the right of immediate change of doctor subject to the mutual consent of the two practitioners concerned. It is believed that the interpretation of a small formal check such as this would give the insured person who may be annoyed because he has been refused a certificate on which he may claim Sickness Benefit the opportunity to reflect.

There is one aspect of the question which was referred to in the discussion on November 30th 1926 namely the possibility of making provision for obviating in future the situation which arose recently in Durham and elsewhere where owing to the coal stoppage many persons were brought to bear upon the insurance system by the trade unions to obtain Sickness Benefit for their members in order to conserve the union funds. The Ministry is urged to take into very serious consideration the desirability of providing in advance for a situation which may easily arise again.

The Committee is also of opinion that certification rules bearing less severely upon insured persons than those at present in operation, that is to say, relying more upon his discretion while providing for a more rigorous prosecution of the individual wrongdoer would result in more efficient certification.

With respect to the general question of the recent increased claims the Committee would point out that under a system of compulsory State Insurance the attitude of the individual insured person with regard to obtaining benefit from State funds is entirely different from that of the voluntary member of an old friendly society or similar body. He will apply for benefit from funds which he regards as State provided and practically unlimited where he would never have claimed from a fund built up entirely from contributions of himself and his fellows. The present tendency to look to the State for help in every emergency is likely to make this factor more important as time goes on. Secondly, the economic pressure which keeps many sick persons at work who might very properly remain away and consequently be in receipt of Sickness Benefit is removed in times of unemployment, with the result that such persons quite properly claim Sickness Benefit. Then there is the wide spread and somewhat vexatious use at present made of medical referees by the approved societies which the Committee believes is tending to lessen the insurance practitioner's sense of responsibility in the matter of certification. Another cause which is operating in regard to women is the advice received at ante-natal and maternity

clinics both before and after confinement. These are, in the opinion of the Insurance Acts Committee, contrary to a system which must be taken into account in any effort to trace the cause of the increase in claims for Sickness Benefit.

In conclusion I am desirous to inform you that the Insurance Acts Committee fully recognises the serious nature of the present position and the duty of the medical profession in this matter. The Local Medical and Panel Committees to hold local meetings on insurance practice the question of certification in its relation to Sickness Benefit claims and to ensure that at such meetings attention should be given to the possibility of co-operation by practitioners in ways which might mitigate the fear that patients who shared to change from a doctor who for one reason had retired Sickness Benefit certificates, would readily be accepted by other practitioners.

Yours faithfully

(Sd) ALFRED COX  
Medical Secretary.

The Secretary,  
Ministry of Health,  
Whitehall,  
S.W.1

This letter to the Ministry of Health was circulated on March 3rd 1927 (M.H. 27) to Local Medical and Panel Committees. It was agreed to arrange meetings of their representatives in order that the question could be fully discussed and recorded that changes might be devised for co-operation of practitioners in the manner indicated in the letter to the Ministry with a view to preventing ill-effects on the movement and the abuse of Sickness Benefit.

1. With regard to the question of in order to strengthen the position of the doctor in the matter of certification the Committee was authorized by Minute 19 of the last Conference to consider the modification of the present method of insured persons to claim a new doctor at any time. The Committee's proposal that insured persons should give two weeks notice of their change of doctor has been submitted by the Ministry and approved by the Approved Societies Consultative Council. The Ministry has expressed a desire to put the new procedure into operation as early as possible and has submitted to the Committee a draft of a new medical card, designed to give effect to the Committee's suggestion. The Committee has no objection to the draft on the ground that it required in insured persons to send a written application to the Insurance Committee to be allowed to change his doctor at the end of fourteen days. Thus the Committee contended, would in many cases result in the insured person imagining that he had to give in his letter a reason which would frequently amount to a complaint against his old doctor in substitution of his request for a change of doctor. After discussion in the matter with the Ministry it has been arranged that the Ministry shall insert in heavy type in the instructions on the card a statement to the effect that an insured person when applying for a change of doctor should not give any reason.

#### CHARGING OF FEES

24. Consideration has been given to Minute 17 of the last Conference expressing the opinion that Form G.P. 15 should be amended so as to provide for the signature of the insured person after paragraph 3 Section (1) acknowledging that he understands it and the date the form being signed by the patient before the service referred to in the form is undertaken. The Committee has carefully considered the manner in which such an amendment might be made to Form G.P. 15, and has not taken into consideration the question of principle involved. The Committee has, however, come to the conclusion that the proposal at the Conference would not be to the best interests of either the patient or the insurance practitioner and has therefore not taken any further action in this matter.

#### MEICAL RECORDS

25. Minute 60 of the last Annual Conference reiterating the previously expressed opinion that it is unnecessary to record all attendances, etc., on medical record cards, except where practitioners had agreed to keep full records of work done for statistical purposes was brought to the notice of the Ministry but the Committee regrets to report that it has not so far been successful in securing any change in the present position. The Ministry states that the expressions of opinion continued in the resolution of the Conference do not appear substantially to affect the chief reasons (set out in paragraph 57 of the last report of the Committee) which led to the Ministry's conclusion that the requirement to keep a record of surgery attendances and visits could not be omitted.

from the system of medical records made obligatory on insurance practitioners and taken into consideration in fixing their remuneration. The Ministry agrees that assuming that the main features of the present system are to be retained there are certain minor modifications which experience suggests may be desirable and would be prepared to discuss these with representatives of the Committee.

26 Notwithstanding the continued refusal of the Ministry to dispense with the requirement that practitioners shall keep a record of every attendance and visit on insured persons the Committee considers that the Conference should reiterate its previously expressed opinion on this matter and recommends—

(Recommendation C) That the Conference reiterate the opinion previously expressed on the subject of Medical Records, namely that the value of careful clinical notes and essential dates on Medical Records is fully appreciated but that it is unnecessary to record all attendances, etc. except where practitioners have agreed to keep full records of work done for statistical purposes.

27 The attention of Panel Committee has been drawn to Minute 62 of the last Annual Conference concerning the inconvenience caused by neglect to forward medical records of insured persons transferred from one practitioner to another and Panel Committee have been asked to improve upon their constituents the necessity for returning the cards promptly when asked for.

#### TRANSFER OF PRACTICES

23 The Ministry of Health agreed to consider the proposal of the 1925 Annual Conference that a return should be made to the original 1913 transfer of practice regulation subject to the period of fourteen days being extended to one month or such other period as may on consideration be found suitable. This was reported to the Conference last year and the Committee's recommendation agreeing to the period being one month was adopted. The matter was brought to the notice of the Ministry at a deputation on November 30th 1926, and the Ministry has since intimated that it is prepared to accept the proposal of the Conference.

#### TITLE TO BENEFIT

29 In 1925 the Conference expressed the opinion that the notification of insured persons to the effect that they are no longer entitled to medical benefit should be made a statutory duty upon approved societies in view of the fact that friction was undoubtedly caused when insured persons applying for treatment were informed that they were no longer entitled to benefit. The Committee reported to the Conference last year (para 75) that certain procedure had been put into operation which it was hoped would result in more prompt and accurate information as to title to benefit being furnished and which the Ministry had said was having this effect. The Conference accepted this assurance and asked the Committee to review the matter in time for the forthcoming Conference and enquiries have been made as to whether the procedure referred to above continues to give satisfactory results. It would appear that since the new arrangements in connection with the clearance of the Central Index Register have been in force the number of insured persons applying for treatment when they are no longer entitled to medical benefit has materially diminished. Having regard however to the immense number of entries to be checked the process of revision is bound to occupy a considerable time before it is complete and its full effects can be estimated.

#### TEMPORARY RESIDENTS

30 Representations have been made to the Ministry with a view to the alteration of the Regulations so as to make it quite clear that an insured person ceases to be a temporary resident at the end of three months from his removal into a new area. The Committee considers that such an alteration is desirable in view of the fact that the present Regulation can be interpreted to allow of payment being made on a temporary resident basis in respect of persons who at the time of removal to another area do not intend to remain in that area more than three months but do in fact remain longer. The Ministry has promised to submit a draft of a new Regulation to meet the wishes of the Committee.

#### PROCEDURE IN CONNECTION WITH CLAIMS FOR EMERGENCY TREATMENT

31 The Committee asked the Ministry of Health to consider the desirability of making provision possibly by a variation of the Distribution Scheme whereby an insurance practitioner is given the right to a hearing before the Panel Committee when it is proposed to deduct from his remuneration

the amount of a claim for emergency treatment by another insurance practitioner in respect of one of his insured patients. The Ministry states that there would be no objection to the amendment of the Distribution Scheme in the manner suggested and is prepared to bring the proposal to the notice of Insurance Committees.

#### PAYMENT OF PRACTITIONER'S EXPENSES IN CONNECTION WITH DISCIPLINARY CASES

32 The Committee had its attention drawn to a case in which a practitioner had successfully appealed to the Minister of Health against the decision of an Insurance Committee and had been awarded the sum of five guineas towards his expenses in connection with the case this being only a small proportion of the legal costs incurred. Representations were made to the Ministry with the result that the Insurance Committee was directed to make a further payment of twenty guineas to the practitioner. The Ministry also agreed that where a practitioner succeeded in an appeal and was found to have been free from blame in connection with the case it was right that he should be reimbursed the taxed costs incurred by him in contesting his appeal less any costs awarded against the insured person which he might reasonably be expected to recover and subject to the understanding that in cases in which the practitioner though successful in his appeal was not entirely free from blame the Minister would feel it necessary to take the practitioner's conduct into account in deciding his award of costs. The Committee has signified its agreement with this statement of the procedure to be adopted in such cases in future.

#### MILEAGE

33 The Committee was instructed by the last Annual Conference (Minute 83) to negotiate on the question of mileage payments to practitioners being made quarterly, and expressed the opinion that this should be a national arrangement. The matter was taken up with the Ministry who pointed out that the Model Scheme for the distribution of the main portion of the Mileage Fund contains a clause providing for the payment of advances in respect of each quarter of a sum not exceeding 20 per cent of the total amount allocated to an area for the previous year. The Ministry states that this provision has been adopted by the majority of Insurance Committees concerned and that in any area where such a provision is not included in the Distribution Scheme it is suggested that the matter should be brought to the notice of the Insurance Committee of the Panel Committee with a view to the necessary amendment being undertaken. It is understood that apart from specific provision in the Scheme the Ministry has authorised payment of advances when Committees who have not adopted the clause above referred to have from time to time applied for permission to make such payments.

#### RANGE OF SERVICE—DENTAL TREATMENT

34 The Committee has not yet heard of a really clear case which would be likely in the law courts to secure a definite decision as to whether dental treatment is included in an insurance practitioner's terms of service or not. In accordance with Minute 92 of the last Annual Conference Local Medical and Panel Committees have been asked to bring to the notice of the Insurance Acts Committee immediately any case of an application for an anaesthetist's fee in connection with dental treatment by an insurance practitioner which appears likely to be suitable for testing the matter in the courts.

#### RANGE OF SERVICE—ULTRA VIOLET RAY TREATMENT

35 Arising out of an application from a Panel Committee for advice in dealing with the claim of a practitioner for charges under Article 38 for services involving the application of special skill and experience in connection with the administration of ultra violet ray treatment the Committee has expressed the opinion that ultra-violet ray treatment is not necessarily a specialist treatment and that it is for each Local Medical Committee to decide upon particular cases as they arise inasmuch as decisions must depend upon local circumstances.

#### MEDICAL BENEFIT FOR SEAMEN

36 Minute 85 of the last Annual Conference expressing the opinion that the existing arrangements whereby the insured seamen who as members of the Seamen's National Insurance Society obtain their Medical Benefit through the Society should be discontinued and that all insured seamen should obtain their Medical Benefit in the ordinary manner through Insurance Committees was communicated to the Ministry of Health. As this opinion coincides with that of

the Royal Commission it is probable that the matter will be dealt with when legislation is introduced dealing with such proposals of the Commission as have been adopted by the Government.

#### MEDICAL BENEFIT FOR INSURED PERSONS OVER 70 YEARS OF AGE

17. The Committee has submitted to it by the Ministry of Health details of a scheme which it is proposed to put into operation for securing correspondence between (a) the number of insured persons over 70 years of age in the Index Registers kept by Insurance Committees of such persons entitled to Medical Benefit and on doctors' lists; and (b) the number actually entitled to, or in a position to claim Medical Benefit. The Ministry stated that it appeared that the present system was unsatisfactory in approved societies was not in a position to keep fully in touch with this class of insured persons who are not entitled to Section or Disablement Benefit and who are not the subject of insurance contributions. The Ministry further stated that the present position results in a considerable omission of the benefits of doctors' lists.

18. The Ministry submitted drafts of a circular letter and model notice to insurance practitioners which it is proposed to issue to Insurance Committees. The main features of the proposed scheme are (1) that the Ministry will from time to time notify Insurance Committees of persons on their Index lists who are over 70 years of age (2) that Insurance Committees will notify the persons and the doctors that the ordinary medical card is to be cancelled and that they must in future fill up and supply medical cards to the valid or periods of 12 months from the end of June to the end of June and (3) that if no application for a special card or renewal of such a card was made within a reasonable period, the patient would be removed from the doctor's list subject to subsequent statement to the Committee received from the doctor. It was stated that the Ministry would then be credited to the doctor in respect of a current year June to June. The Ministry stated that the procedure proposed would of course apply to persons over 65 years of age over the 2nd January 1925 for both widows and Widowers, Orphan and Old Age Contributors. Persons aged 12 to 16 insurance contributions would have to be payable by such persons. The Ministry stated that it was wished that no undue hardship to the persons affected would result from the new procedure and that it would effect an improvement in keeping touch with such persons.

19. Correspondence has taken place between the Committee and the Ministry upon this matter and the Committee has informed the Ministry that its experience leads it to the belief that the Ministry's proposal may constitute a hardship upon the class of insured persons referred to and is likely to give trouble to doctors in getting patients reinstated on their lists. The matter has been discussed with the Ministry and further consideration is being given to the problem.

#### JOINT RESEARCH BY MEDICAL PRACTITIONERS

20. The Ministry of Health forwarded in May, 1926, for the observations of the Insurance Acts Committee a scheme for co-operative research by insurance practitioners which had been submitted by an outside body to the Ministry of Health for its consideration. The Insurance Acts Committee considered the matter and sought the advice of the Science Committee of the Association. The Ministry was then informed that while the Committee could not agree to the scheme suggested it was prepared to consider the possibilities of a scheme for joint research by insurance practitioners. A Sub-Committee was then appointed consisting of representatives of the Insurance Acts Committee and Science Committee. This Sub-Committee has discussed the matter with representatives of the Ministry of Health and has arrived at the following conclusions—

- (1) That any scheme of research must be voluntary and unpaid,
- (2) That any research or researches undertaken should not be restricted to either insurance practitioners on the one hand or to insured persons on the other,
- (3) That the researches should be organised by the Association and that where possible use should be made of the Divisional machinery of the Association, i.e., the Divisions should be asked in respect of certain researches to obtain the co-operation of a number of practitioners (whether engaged in insurance practice or otherwise) in each area,
- (4) That the subject or subjects should be capable of being dealt with by the individual practitioner in a simple manner, and that the results of the enquiry in order to sustain interest should be available after not too long a period.

21. This matter is one which affects the whole profession, and the scheme outlined has received the general approval of the Representative Body of the Association in July. The subjects of the proposed investigation are (a) Various operations and (b) After History of Gastro-Enterostomy. The Insurance Acts Committee hopes that the new system will have the cordial support of all Local Medical and Panel Committees as it is believed that such collective research might prove of real service to the profession and to the community.

#### OPHTHALMIC BENEFIT

22. It is evident that there is still considerable dissatisfaction with the present arrangements for the administration of Ophthalmic Benefit but as the Committee stated in its report last year, there is little prospect of any improvement in the situation so long as this benefit is administered at the entire discretion of Approved Societies or until it becomes the Committee's belief as it should be, one of the statutory benefits under the Act.

23. The main difficulty appears to be the action of Approved Societies in refusing in a large number of cases at any rate the insurance practitioner's recommendation that a particular member of the Society should consult an ophthalmic surgeon. Some societies even go so far as to send to an optician the member's card with such a recommendation and if the optician then refers the member should go to an ophthalmic surgeon the society will not then accept a recommendation. Societies take such action in the course of action, that they have not the funds to pay for the treatment and all cases recommended by insurance practitioners to ophthalmic surgeons, and Sir Walter Hunter, the Controller of the Insurance Department of the Ministry of Health in the course of an address to the last Annual Conference declared that if patients were recommended uniformly to consult an ophthalmic specialist and were not to have Ophthalmic Benefit would cease at an early date on account of the high cost of such treatment. It is of course rather the question as to whether the present arrangements whereby in many instances Approved Societies are treated by ophthalmic surgeons as private patients at a rate of one guinea or even more, is really a fair one offered by the medical profession or whether the position should not give an option either to the patient or to the insurance practitioner. This is a question which is receiving careful consideration by the Ophthalmic Committee on which the Insurance Acts Committee is represented and the Annual Representative Meeting at Durham in July has authorized the Council of the B.M.A. to explore the possibilities of the provision of this benefit by a list of clinics in certain populous areas as in addition to the present arrangements. It should be distinctly understood however that any alternative arrangement would not in any way vary the principle for which the Association stands namely that under no circumstances should a patient be referred to an optician without prior examination by an ophthalmologist.

24. The Committee had its attention drawn to an instance where an Approved Society had intimated to an insurance practitioner who was on the list of ophthalmologists that the Society would be unable to accept his examination of an insured member as to find in his capacity as an insurance practitioner given the recommendation that an ophthalmic surgeon should be consulted. The matter was brought to the notice of the Ministry who stated that a communication had been addressed to the Society concerned and that it was hoped the circumstances to which attention had been drawn would not recur in future cases. The Ministry also stated, however, that a system under which an insurance practitioner may refer his patients for specialist examination by himself provided possibilities for abuse, and that it would be necessary for a watch to be kept on the matter.

25. The Association's list of approved ophthalmologists now contains 875 names. Some of the practitioners on the list are available at more than one address, so that there are 976 addresses on the list. The eligibility of practitioners for inclusion in the list is decided by the Ophthalmic Committee of the Association. Each application is considered on its merits and the applicant is required to conform to criteria which are identical with those laid down in paragraph 8(5) of the terms of service of insurance practitioners in connection with specialist services. Where a practitioner bases his application on the fact that he is generally recognised by his colleagues as possessing special skill in treatment of the eyes, it was decided to enlist the co-operation of the Local Medical Committee concerned in confirming this fact, and a communication (N 24) was accordingly addressed to Local Medical Committees on January 8th, 1927, asking them to assist in this matter. One or two Local Medical Committees, however, appear to have been under the impression that a practitioner must be doing specialist practice in order to qualify for inclusion in the list. This

is not so. The requirement is that he is generally recognised by other practitioners in the area as having special proficiency and experience in a subject which comprises the service rendered. That is to say that some of his neighbours recognise his proficiency in ophthalmic work by employing him to attend cases of their own.

The Panel Committee are doubtless aware that a Bill has recently been introduced into Parliament having for its objects the State registration of opticians and the regulation of the practice of sight testing. Persons registered under the proposed Bill would be endowed with special privileges by the State, would have the right to use after their names letters implying that they are recognised as being qualified to practise sight testing to charge and recover fees for such practice, and would have the statutory right to give certificates relating to visual acuity or visual defects which must be recognised as admissible by any local or central authority or government department in any part of Great Britain. The Bill was introduced for Second Reading in May but in view of the fact that the Minister of Health had set up a Departmental Committee to consider the draft Bill and to make recommendations, the Second Reading was negatived upon the understanding that the Bill could be reintroduced at a later date. The Association was asked to nominate a member to serve upon the above-mentioned Departmental Committee and Dr H. B. Brackenbury has been appointed. A memorandum of evidence has been submitted to the Departmental Committee on behalf of the Association. This memorandum is based upon the Association's policy contained in Minute 143 of the Annual Representative Meeting of 1923, in that any State recognition of sight testing by persons not possessed of a medical qualification would not be in the interest of the community and ought to be opposed in the strongest possible manner.

#### PRESCRIBING—THE CHEMISTS' NEW AGREEMENT WITH THE MINISTRY

47 The contract between the Ministry and the chemists for the supply of drugs etc. to insured persons expired this year and a new agreement has been negotiated. The financial arrangements under the Economy Act of 1926 provide a sum of 13s. per insured person per annum for Medical Benefit. After the other fixed payments such as the Capitation Fee to Doctors, mileage and certain administrative expenses have been made the balance is available to pay the chemists. With the expenditure on drugs at its present level there will not be enough to meet the bills this year. Faced with this position the chemists have agreed to take over the whole Drug Fund provide what drugs etc. are ordered and take the risk of the profit or loss on the transaction the Ministry being freed of any further responsibility in the matter.

48 The chemists most unnaturally asked that all practicable steps against extravagant prescribing be taken and they asked that the Regulations be amended to allow the Local Pharmaceutical Committees to make representations to the Panel Committee in cases in which in their opinion there is *prima facie* evidence of extravagance in an insurance practitioner's prescribing.

49 On being informed of these proposals the Insurance Acts Committee at once told the Ministry that while the contract with the chemists was a matter entirely between the Ministry and the chemists yet the Insurance Acts Committee could not agree to any alteration or regulations that would put the chemist in a position to criticise the doctor's prescribing. The Committee at the same time expressed its willingness to co-operate with the Ministry or the chemists to ensure reasonable economy in prescribing.

50 As the matter was one of considerable urgency the Committee undertook to meet the Retail Pharmacists' Union to discuss the situation. This meeting took place and the Committee's position was made clear to the chemists. It was pointed out to them that the suggested procedure was open to serious criticism both on the question of public policy as well as in regard to the traditional relations between physician and pharmacist. It was also shown to them that the existing arrangements with the Pricing Bureau provided all the necessary information for those who were responsible for setting the existing machinery in action but that this procedure had never been put into effective operation by the Ministry. The Insurance Acts Committee believing that in no case yet has a Regional Medical Officer brought a case of alleged extravagant prescribing before any Panel Committee. After the discussion the members of the Retail Pharmacists' Union present agreed to make a year's trial of the present procedure, and not to press for alteration of the Regulations, and so informed the Ministry, receiving in return the promise of cordial co-operation from the Insurance Acts Committee.

51 The Insurance Acts Committee has further undertaken to consider the question of a National Formulary and to co-operate in the compilation of a list of preparations which should ordinarily be regarded as foods and not as medicines.

#### REVISION OF BRITISH PHARMACOPOEIA

52 It was reported to the last Annual Conference that steps were being taken with a view to the revision of the British Pharmacopoeia and arising out of a recommendation of the Insurance Acts Committee that Committee was asked (Minute 107) to investigate the question of the inclusion of drugs and preparations in the new Pharmacopoeia in relation to economy in prescribing under the National Health Insurance Acts and to endeavour to obtain representation on the Committee which was set up to deal with the revision of the Pharmacopoeia.

53 As regards representation on the Revision Committee the Committee decided to take no action in view of the fact that the Council or the Association had appointed a Special Committee of which two members of the Insurance Acts Committee (Drs J. W. Bone and E. Lewis Lilley) were members. (1) to act as a Watching Committee in relation to any steps that may be taken relative to the revision of the British Pharmacopoeia and (2) to prepare evidence and nominate witnesses and when a Revision Committee is appointed by the Lord President of the Privy Council, Drs Bone and Lilley have been asked to represent the views of insurance practitioners to the Association's Special Committee referred to above.

54 The position in connection with the proposed revision of the British Pharmacopoeia is that a Sub-Committee has been appointed by the Committee of Civil Research (a Committee of the Privy Council) to consider the existing practice relating to the method of preparation of the Pharmacopoeia. At the invitation of the above-mentioned Sub-Committee the Association has submitted a memorandum containing its views upon the matter and its representatives (Dr J. W. Bone and the Deputy Medical Secretary) have given oral evidence before the Sub-Committee. In its memorandum the Association advanced the view that the method of compilation hitherto adopted by the General Medical Council was not the best that could be devised and that any attempt to prepare another edition of the Pharmacopoeia on the lines of the 1914 edition would break down unless the co-operation of all interests were secured. The suggestion was made that a Committee of experts should be appointed by the General Medical Council and should consist of members representative of the chief interests concerned, that the highest degree of responsibility should be given to this Committee to make decisions to initiate recommendations and to explore the whole field of modern therapeutics, and that it would then remain for the General Medical Council to adopt or to refer back the conclusions or its Committee. In its memorandum the Association also mentioned the need for economy and drew attention to the need for special regard being paid to the Drug Tariff under the National Health Insurance Acts.

#### ISSUE OF PRESCRIPTIONS FOR THE PURPOSE OF DRUG TESTING

55 The Conference (Minute 75) asked the Committee to consider the desirability of approaching the Ministry of Health with a view to obtaining the amendment of the present scheme for testing drugs supplied by chemists by providing that the Panel Committee should make a selection of the prescriptions that the analyst's certificates should be considered by a Sub-Committee of the Insurance Committee containing representatives of practitioners and that cases requiring further action should be referred to the Joint Services Sub-Committee. The Committee has considered the matter but is not in agreement with any of the above proposals. The Committee believes that the question involved is that of accurate dispensing is capable or being adequately dealt with by the Pharmaceutical Service Sub-Committee and seeing that the contract is between the chemist and the Insurance Committee is not a matter directly affecting the medical profession. Any complaint by a practitioner concerning the dispensing of his prescriptions should be made to the Insurance Committee with which body action would lie in respect of improper dispensing. Furthermore the Committee considers that it is not desirable that the medical profession should seek to have any disciplinary power over members of another profession which would be the position if the suggestion in Minute 75 were carried out.

#### NATIONAL HEALTH INSURANCE ACTS AND PATHOLOGICAL LABORATORY SERVICES

56 Apart from provision for the cost of vaccines and autogenous vaccines no facilities have so far been made available for the furnishing of pathological reports upon specimens nor for the cost of containers for transmission of

specimens to and from a pathologist. The recent Royal Commission on National Health Insurance however, recommended that as and when funds were available the present statutory benefits of the Act should be extended to various other matters in a certain order of priority, in which laboratory services were placed third.

57 There are in operation in various parts of the country tentative Laboratory Service Schemes in which use is made of the facilities afforded either by voluntary hospitals or by the health service of the local authority. The Insurance Acts Committee feels that in anticipation of the establishment of a National Health Insurance Laboratory Service it is very important that the position of pathologists and the terms and conditions of their employment in connection with a National Scheme should not be prejudiced by the launching of separate schemes which have no connection with one another or with any general lines of policy. The Committee is urging the Ministry not to rigidify the schemes which are at present in existence as forming any precedent for future statutory arrangements of this nature likely to be set up under the National Health Insurance Acts and has received an assurance from the Ministry that if and when a complete pathological service for insured persons is introduced, the Ministry will give full weight to the recommendations of the Royal Commission in this matter.

58 The Committee's attention was drawn to a Laboratory Scheme which had been circulated by an Insurance Committee to all other Insurance Committees throughout the country, with a request that some similar scheme be adopted. The Committee felt it necessary (in M 27 dated 5th May, 1927) to draw the attention of Panel Committees to the importance of the subject thus raised, and to ask them to withhold decision on any scheme for the provision of pathological services in view of the fact that the matter was to be discussed between the Insurance Acts Committee and the Ministry. This discussion has taken place and the Committee is informed that it is possible, under Section 26 of the National Health Insurance Act, for an Insurance Committee to make a donation out of its Administration Fund to an institution which undertook to make some return. It would appear that the Ministry has no control over expenditure from an Insurance Committee's Administration Fund, but the Government Auditor has to be satisfied that in respect of any donation to a hospital or charitable institution, the Insurance Committee receives some benefit in return. This means that an Insurance Committee can only carry out a pathological scheme on the lines of that referred to above if there is sufficient money in the Committee's Administration Fund.

#### TUBERCULOUS INSURED PERSONS

59 The Conference (Minute 102) expressed the opinion that insurance practitioners should not be expected to provide sickness certificates, prescriptions, or medicine, for tuberculous patients who were receiving continuous treatment at the Tuberculosis Dispensary. This matter was discussed with representatives of the Ministry of Health who stated that the procedure to be followed in cases where insured persons suffering from tuberculosis was set out in the Ministry's Memorandum 286 and that briefly the position was that where an insured person accepted systematic dispensary treatment on the advice of the Tuberculosis Officer no further obligation devolved upon the insurance practitioner except in the case of emergency in which he was required to inform the Tuberculosis Officer of the emergency and the treatment given. The Ministry further stated that the object of the new Regulations introduced two or three years ago was to secure that the tuberculous insured person was in the care of one doctor only, either the private practitioner or the Tuberculosis Officer.

60 The Committee considered that in view of the doubt and misunderstanding which appeared to exist amongst insurance practitioners concerning the relative positions of the insurance practitioner, the insured person and the Tuberculosis Officer, it was advisable that an explanatory statement should be issued. This was accordingly prepared, submitted to and approved by the Ministry of Health as being a correct statement of the present position and issued to Local Medical and Panel Committees in circular M 25 on March 3rd 1927.

#### PROVISION OF SPA TREATMENT FOR INSURED PERSONS

61 Your Committee has taken part in some discussions with representatives of Approved Societies, of Spa Doctors and Spa Managers concerning the possibility of providing Spa treatment for insured persons. It is found that the commitments of Approved Societies are such that there is no likelihood of money being available from Approved Society sources for this purpose for a long time.

#### ALTERATION OF MEDICAL CERTIFICATES BY APPROVED SOCIETY OFFICIALS

62 Minute 70 of the last Annual Conference instructing the Committee to press for disciplinary action being taken against approved society officials who altered or in any other way falsified certificates or otherwise interfered with the practitioner in the discharge of his duties under the Terms of Service, has been brought to the notice of the Ministry who have replied that they have the matter noted for action in an amending Act.

#### EMPLOYMENT OF PRIVATE REFEREES BY APPROVED SOCIETIES

63 Minute 105 of the last Annual Conference, deploring the employment of private medical referees by approved societies and instructing the Committee to press the Ministry to make it obligatory on all societies to use the Regional Medical Staff of the Ministry, was discussed between the Insurance Acts Committee and representatives of the Ministry. The latter stated that, apart from persuasion, it would not be possible without fresh legislation to prevent societies employing their own referees, if they so desired, and that persuasion would be difficult. In view of the large number of claims last autumn, a few societies had appointed such referees but the number was not great. The Ministry also stated that the experience of one or two societies which had been employing private referees had been examined, and the percentage of cases declared by them capable of work did not differ materially from the percentage so declared by the Regional Staff of the Ministry.

#### SICKNESS BENEFIT

64 Minute 104 of the last Annual Conference instructed the Committee to take action with a view to securing that approved society officials should not have the power to refuse sickness benefit, on medical grounds alone to any insured person who had been certified as incapable of work unless the insured person had been reported fit for work by the Regional Medical Officer. It was made clear at the Conference that the Committee had no power to urge a reform on the lines suggested, as it was not a matter with which the medical profession was directly concerned. The Committee has on full consideration felt itself unable to take any action in connection with this matter.

#### POSITION OF INSURANCE COMMITTEES

65 It was reported to the last Annual Conference that a memorandum (M 27) had been issued to Panel Committees confirming the policy of the Association as regards the unification of all local health activities in one local health authority, and Panel Committees were asked not to express any opinion for or against the abolition of Insurance Committees until an opportunity had been given of comparing the present proposals of the Government as to the nature and constitution of the new local authority to which it was proposed to hand over the duties of Insurance Committees, with the views of the Association, as everything depended upon the character of the new local health authority. It was thought that the above mentioned memorandum had made the Association's policy in this matter quite clear but from the resolutions passed by Panel Committees and forwarded to the Insurance Acts Committee there appeared still to be some dissatisfaction with what was understood to be the Association's policy. The Committee has therefore prepared and circulated to Local Medical and Panel Committees a further memorandum (M 28) upon this matter.

#### STATISTICS

66 The last Annual Conference (Minute 94) expressed the opinion that it was desirable that the Committee should take steps to collect statistics as to the proportion of total services rendered of the following specialist services which are included in the capitation fee, but are not included in the ordinary visits and attendance fees of private practices, namely (a) special visits in response to calls received after morning surgery hours, (b) night visits between 9 p.m. and 9 a.m. (c) treatment of fractures and dislocations, (d) vaccination and inoculations (e) catheter cases, (f) administration of anaesthetics, (g) miscarriages and (h) certificates. The Conference desired that these statistics should be collected only in respect of uninsured persons of similar economic standing to the insured. In considering how this information should be obtained the Committee came to the conclusion that it would be useless to ask individual practitioners to collect it and that the only possible source would be from Public Medical Services. Application was therefore made to the various Public Medical Services for assistance in this matter but these bodies have replied stating that they are unable to furnish the desired information.

67 With regard to the statistics which the Committee was instructed by the 1925 Annual Conference to endeavour to obtain and which it has taken steps to obtain during the past 12 months certain figures have been collected and the thanks of the Committee are due to the practitioners who have so willingly assisted by supplying the information which has thus been obtained. The data supplied are exceedingly valuable but the Committee regrets that the volume of information in its possession is not as great as that for which it aspired (10 per cent in all areas). It is not sufficiently realised that the onus is on Panel Committees to induce insurance practitioners to supply the material which is so necessary when negotiations on their behalf have to be undertaken. It is essential that up-to-date information should always be available and only those who are actually doing insurance work can supply it.

68 The Committee has considered a suggestion that a Sub-Department of the Medical Department should be instituted to be known as the Statistics Department towards the cost of which the National Insurance Defence Trust might be asked to contribute and which would be provided with additional clerical assistance as the work developed. The analytical work of the data now being collected is carried on out of ordinary office hours by the Medical Department and is paid for out of the National Insurance Defence Trust while the ordinary correspondence relative to this matter has so far been attended to in office hours by the staff of the Medical Department along with its other duties. The time may arrive when owing to the increased bulk of the work in connection with the collection of statistics increased assistance may be necessary, and when it does the Committee will have no hesitation in undertaking the necessary expense and asking for the necessary funds from the National Insurance Defence Trust. But as yet such expense would not be justified.

#### AMOUNT OF CENTRAL POOL FOR 1926

69 The following are the estimated and finally determined figures of the Central Practitioners' Fund (England) for 1926 together with the corresponding figures for 1925—

	Estimated	Final
1925	£5 560 000	£5 716 600
1926	£5 629 000	£5 827 000

#### V—NATIONAL INSURANCE DEFENCE TRUST

70 At the last Annual Conference it was decided that there should be no relaxation of effort in the matter of obtaining contributions for the Trust until a total of £250 000 had been reached. It was also decided that each area's quota of a fund of £250 000 should be given in the next statement of the Trust issued to Local Medical and Panel Committees. This was given effect to in the statement (M. 26) issued in March and the Trustees are glad to report that several areas have already contributed their full quota of the amount at present being aimed at. Against this however there are a number of areas which have so far subscribed very little towards their quota and several who have subscribed nothing.

71 A statement of the financial position of the Trust as at December 31st 1926 and the income and expenditure for the year 1926 was included in M. 26 issued in March and appeared in the B.M.J. Supplement of 26th June 1927. In this statement the sum of £250 was shown as being on loan to the Essex Public Medical Service. This should have been £500 the other £500 having been previously shown by inadvertence as a payment out of the Trust instead of a loan. A further statement showing the income and expenditure for the twelve months ending August 31st 1927 and the amounts so far subscribed by each area will be issued with the Provisional Agenda of the Annual Conference in September.

72 Panel Committees are aware that there is a Fund known as the Medical Representation in Parliament Fund the trustees of which are the members or Council or the British Medical Association for the time being in office. This Fund which is a voluntary Fund and which has been generously supported from time to time by many Panel Committees has for its objects (1) the securing of a larger representation of the medical profession in Parliament by obtaining suitable medical candidates and suitable constituencies and assisting when necessary by monetary grants such candidates irrespective of political party (2) to help maintain approved Members of Parliament as may be deemed necessary or advisable and (3) to promote such other Parliamentary action as may be thought advisable. The trustees of the National Insurance Defence Trust have given serious consideration to the question of co-operating with the Medical Representation in Parliament Fund with a view to securing adequate medical representation in Parliament with special reference to representation of the interests of insurance practitioners. The trustees have come to the conclusion that

some of the money now at its disposal might with advantage be spent in this way and has set aside the sum of £1 000 for the support of medical candidates for Parliament subject to the following conditions—

(1) That candidates be approved by the trustees of the National Insurance Defence Trust.

(2) That the candidates be also supported by the trustees of the Medical Representation in Parliament Fund of the British Medical Association.

(3) That the trustees of the National Insurance Defence Trust are adequately represented on the Parliamentary Elections Committee.

(4) That the representatives of the trustees on the Parliamentary Elections Committee be authorised to act for the trustees under the following conditions—

(a) At the request of the Chairman of the Parliamentary Elections Committee when immediate action is necessary.

(b) Subject to full report to the trustees at the first convenient opportunity.

## THE ANNUAL EXHIBITION OF SURGICAL INSTRUMENTS, APPLIANCES, DRUGS, FOODS, ETC.

(Continued from page 103)

### Dietetic Preparations

The dietetic preparations to be seen at Edinburgh mostly bear rubbishy names and require no description but some firms, in addition to their usual products, had new introductions. Thus Oxo, Limited, showed bottles of meat juice a preparation of the natural juices of fresh lean beef, containing soluble uncoagulated proteins, also beer essence prepared for invalids. The Glaxo firm exhibited ostelin (tablets and cream) a substance of which we have already given an account. It is offered as a convenient means of taking the essential principles of cod-liver oil while avoiding the intolerance often exhibited towards its fatty constituents. Virol, Limited showed a special preparation of their well known food with full cream Devonshire milk. Another exhibit here was virolax, an emulsion or finely divided paraffin. Horlick's Malted Milk Company emphasized the use of their malted milk in rendering palatable the bismuth meal employed in radiology. By the addition of hot or cold water the malted milk furnishes an opaque emulsion or the desired consistency in which to suspend the heavy metallic salt, yet free from the heaviness and insipidity of bread and milk or porridge.

Benger's Food, Limited, exhibited photographic transparencies illustrating the use of Benger's food in infant feeding and among the several other products of the firm were peptonized beer and chicken jellies. The stand of Nestle and Anglo-Swiss Condensed Milk Company reflected the atmosphere of cleanliness and purity associated with such products a food of attractive character shown here consisted of a full cream milk malt products and sugar. Meid Johnson and Company exhibited reconstituted milk food for infants adapted to breast-milk standards. The special point was made with regard to this and other diet materials of this firm that they were advertised only to the medical profession and that no directions were printed on the tins, the whole or the directions being in the hands of the doctor. Keen, Robinson and Company Limited which is incorporated with the Colman firm exhibited malted porridge upon which we published a special note some time ago. It is claimed as a complete food for infants invalids, and expectant and nursing mothers. This firm's well known hives and giant preparations were also exhibited, as well as other materials for gruels and porridges. A stand was again devoted to Sister Laura's Food (Laura M. Smith), recommending it as having the effect of breaking down the mucus in the case of high fever's milk with which it was prepared. Granar Food, Limited exhibited some crisp and appealing biscuits made from whole wheat also gluten bread to diabetics. Bernal food with and without the addition of milk were shown by the Glasgow firm of Mon Gomerie and Company, Limited, for the latter it was claimed also that they were nourishing without being a tax on the digestive organs. Bernaline bread was shown by

the same firm Vitaha, Limited, showed a meat juice for which it was claimed that in the process of preparation the vitamins and the active properties of the organic salts were not sacrificed.

Eno's fruit salt probably needs no "bush," but it had, as usual, an attractive little "bower" of its own, where its long record of popularity was advertised. The French natural mineral water, Vichy-Celestin, and other French and Austrian waters were again the exhibit of Ingram and Royle, Limited, and from continental springs one was transported to English apple orchards by Gaymer's cider (which was celebrating the thirtieth year of its appearance at the British Medical Association's Exhibition), and to tropical cultivations by Cadbury's cocoa and chocolate. A milk-and-honey chocolate here was specially delectable.

Finally, as a corrective for my food crutches or fads, as well as a means of enlightenment for the ignorant, the Food Education Society, with its many publications on dietetics and hygiene, was ready to point the way to common sense.

#### Baths and Spas

The virtues and attractions of Bath were proclaimed, in the genteel fashion one would expect, by some excellent photographs of the bathing establishments and water-colour drawings of the chief features of interest in the city. The Old Royal Baths are to be reopened in the early autumn. The bathing establishment at present includes the Queen's Baths and the new Royal Baths, the latter which were opened in 1916, have been three times considerably extended.

Hannogate advertised the claims of its eighty-eight different varieties of natural mineral water, but especially its strong and mild sulphur springs. A Hannogate "sulphur water ticket" for 12s weekly entitles the purchaser to mineral drinking waters as required, three alkaline or sulphur water baths, and admission to certain amenities of the spa.

The claim of Droitwich was that of the unique brine baths spa, where the brine is 40 per cent more dense than that of the Dead Sea, so that these Worcestershire springs are the most saline waters known. The exhibit consisted of photographs and artists' drawings of this useful resort and its neighbourhood.

Buxton completed the quartette with its hot and natural baths. Here again the exhibit consisted of photographs of the bathing establishment and the Derbyshire scenery. The corporation is shortly taking over the Buxton gardens, and will conduct them in conjunction with the baths.

One stand was used to advertise Stanboroughs, a modern hydrotherapeutic establishment at Watford, on a country estate consisting of 200 acres of park land. All kinds of hydrotherapeutic treatments are given here under the supervision of a qualified medical man.

#### Books, Publications, Office Equipment, etc

The official guide placed in the hands of members stated that among the first of Edinburgh's industries was the publishing of books, and, as anticipated, several Edinburgh book houses contributed to the exhibition. Among them were the publishers E and S Livingstone, whose house, originally confined to bookselling, was founded more than sixty years ago. Books published during the present year included the massive work by Lees on the diagnosis and treatment of venereal diseases, Mun's bacteriological atlas, and the second edition of the atlas by McKendrick and Whittaker, a work containing 450 reproductions from x-ray photographs. A smaller work was Riddell's *Medical Electricity and Radiology*. The first five volumes of a new series of dental manuals were shown.

Another Edinburgh publishing house, Oliver and Boyd, made a feature of works whose authors were Edinburgh physicians and surgeons, among them a useful work on the principle of early active movement in treating fractures of the upper extremity by Mr J W Dowden, with 224 illustrations. Others were *Exophthalmic Goitre* by Dr John Eison, the fourth edition of *The Clinical Study and Treatment of Sick Children* by the late Dr John Thomson, *Pulmonary Tuberculosis* by Dr John Guy, and Dr Easterbrook's *Morrison Lectures, Mental Invalids*.

Two Edinburgh booksellers also had stands. William Bryce had a well selected display of medical works of various publishers, as well as leading medical and scientific publications, British and foreign. James Thun included with some recent medical works an interesting selection of second-hand volumes, and some antiquarian ones—for example, "The remaining medical works of that famous and renowned physician, Dr Thomas Willis" (1681), and the works and life of Harvey, in Latin (1766). Another Scottish firm of booksellers was John Smith and Son (Glasgow), who showed a large number of recent publications on all branches of medicine and surgery, and again an interesting selection of early medical books.

Oxford University Press adorned its stand as usual with an array of notable volumes. One of them, issued during the week of the exhibition, was *The Ear, Nose, and Throat in General Practice*, by D A Crow. Others were *Intra-cranial Tumours* by Paves-Stewart, *A Textbook of Psychiatry* by Henderson and Gillespie, and second editions of *Price's Diseases of the Heart* and of *Graham's Diabetes Mellitus*.

A number of American as well as English works were to be seen at the stand of the W B Saunders Company. The American works run to vastness—witness *Pediatrics* (eight volumes), edited by Abt, and *Bickham's Operative Surgery* (six volumes). These, from the point of view of size, made the fourth edition of *Moyrhan's Abdominal Operations* appear quite diminished, although that comprises two octavo volumes and runs to more than 1,200 pages. The "Collected Papers" of the Mayo Clinic for 1926 were shown here.

J and A Churchill, Limited, placed in the forefront the *Medical Directory*, which reaches its 84th year with the next issue. At this stand a recently published book into which one was tempted to dip was *Pury's Some Famous Medical Trials*. Other works noticed were Craig's *Psychological Medicine* (fourth edition), *Sequeira's Diseases of the Skin*, and *The Queen Charlotte's Practice of Obstetrics*, by members of the staff of that hospital.

The *Medical Annual* was the leading exhibit of John Wright and Sons of Bristol, and other works noted here were *Laryngoscopy*, by J B Macalpino, the second edition of *Diseases of the Nose, Throat, and Ear*, edited by Logan Turner, and the ninth edition of *An Index of Treatment*, edited by Hutchinson and Sherren.

H K Lewis and Company, in addition to a selection of their own publications, showed a few of the most important and standard works issued by other publishers. They had also a good medical stationery exhibit, including card index systems, ledgers, and card books. Among their own publications were the fifth edition of *Stoddart's Mind and its Disorders*, *Sykes's Manual of General Medical Practice*, and several works on artificial light treatment.

A newcomer among the exhibitors was H M Stationery Office, with the publications of the Medical Research Council, the Ministry of Health, the National Physical Laboratory, and other Government or Government supported bodies, and our contemporary *The Lancet* also had a stand at which it exhibited its special numbers and various reprints and other publications.

Two makes of typewriters were shown. One was the Royal typewriter, which both in its ordinary and its portable form is a machine of great efficiency as well as elegance. The portable form is particularly convenient. It was shown also fitted with a medical keyboard. The instrument at the other stand was the Hammond typewriter, with which a large number of different kinds of type can be used. It is only necessary to turn a knob and, still with the same instrument, one writes in a different style of type or in a language of different alphabetical characters. A special medical arrangement was furnished with the instrument for convenience in writing prescriptions, labels, or technical articles containing unusual symbols.

The outstanding display of the Museum Galleries, London, was again a welcome feature of the Exhibition. Here were shown, in perfect taste and colouring, reproductions of the old masters, a series of famous portraits of famous people, mozzotints of works by Turner, etchings of London by several accomplished artists, all full of atmosphere and colour, and many other fine specimens of

engraving. A mezzotint portrait of Lord Lister was given the position of honour, and there were portraits of Hunter, Simpson, Pasteur, Harvey, Huxley and Jenner, as well as a mezzotint of "Dr Harvey explaining to Charles I his theory of the circulation of the blood," engraved direct from the original by permission of the Royal College of Physicians. We were told at this stand that the members of the medical profession are foremost among those who collect works of art or purchase the choicest reproduction. Certainly the stand was a centre of continual interest at Edinburgh and a place of retirement for mud and ice.

#### Heating Appliances, Laboratory Equipment, and Classrooms

Six gas-stove manufacturing firms—namely, Arden Hill and Company, the Davis Gas Stove Company, Fletcher Russell and Company, the Richmond Gas Stove and Meter Company, Wilsons and Mathiesons, and John Wills and Company—combined in an exhibition of modern live-gas grates and gas cookers. This was called the Radiation Stand, and was designed to illustrate the success of the efforts of manufacturers to produce domestic gas appliances which will satisfy health requirements. The gas grates shown incorporated in the canopy the patent injector venturi or "which has been worked out to ensure proper air charge of the apartment and absence of draughts. The gas burners had a automatic heat controller, which enabled food to be cooked entirely without attention. To show what a superior thing is the modern gas fire to the earlier forms, and also to the coal fire, comparative spectra of the energy emitted at various flame-lengths, as well as other diagrams illustrating the results of research work, were exhibited. It was altogether an interesting demonstration of the hygienic and other values of gas as a fuel. One of the firms concerned, Fletcher Russell, showed at another stand a range of the latest of their appliances adapted to chemistry, as well as gas distributors for laboratory tables and various forms of Bunsen burner.

A very fine display of laboratory equipment was made by Charles Harrison and Company, Ltd. Among other apparatus centrifuges were shown with speeds of from 500 to 10,000 revolutions a minute, also water baths, sterilizers, drying ovens and stills. But the principal exhibit was a range of microscopes, including a new high power binocular microscope by Reichert, a new capillary mirrorcope, and some photomicrographic apparatus specially built for opaque objects and for cinematography. The new dark-field condenser with built-in light source was also an object of interest.

Another excellent display of microscopes was to be found at the stand of Ogilvy and Company, who was also a large photomicrographic apparatus with special facilities for obtaining optical centres. Some new models of Leitz microscopes for routine work and for special research work were exhibited as well as many kinds of microscope accessories. There was also shown a new epididymoscope for the projection of opaque objects and lantern slides using a filament lamp as illuminant. This firm is the agent for Stillé of Stockholm who is surgical instruments and operating table were exhibited.

The exhibit of Baird and Tatlock (London) consisted of bacteriological and medical apparatus for educational and research work and attention was specially drawn to incubators with a simple automatic control over a wide range as well as water and electrical centrifuges, balances, sterilizers and all kinds of laboratory equipment. A new apparatus was an auto-immersion for staining slides, each stain proceeding to the same degree.

A demonstration of a recording sphygmomanometer giving an ink tracing of the heart beat in terms of millimetres of mercury was a noteworthy feature of the exhibit of Short and Mason Limited. The other apparatus on here included ordinary clinical and recording thermometers of various patterns, urinals, glassware and a microbarograph, which is a sensitive recording barometer giving magnified readings of variations of atmospheric pressure. The scientific instruments of this firm bear the well known name of Tyco.

The Behring Institute, of Marburg, Germany, gave a demonstration of a "venule" for the sterile withdrawal of blood. This is a modification of their "serule," an arrangement which combines syringe, cannula, and clamp. By the formation of a vacuum in the ampoule the instrument is made to serve as an aspirator for all kinds of liquids, and its special value in making blood tests, owing to the minimization of risk of contamination—the specimens taken being sterile, and so remaining until examined—was emphasized.

On a very different line a pretty exhibit was shown by Sedley Rothwell, of Oxford Street, in the shape of "the artistic effects that can be obtained by the use upon glassware of specially prepared paint. The stand comprised designs in hand painted glassware and Italian glass work, which is a form of plaster bas-relief. The designs were conventional and floral, and adapted for table service or toilet articles.

#### Medical Insurance

At the stand of the Medical Sicknes, Annuity and Life Assurance Society (500, High Holborn W.C.1) information was given on prominent sickness and accident insurance, life and partnership assurance, loans for house purchase, and similar matters. It is well known that this society was founded to enable medical practitioners to obtain sickness and accident insurance and life assurance on terms adapted to their special needs. One attractive policy proposed was an every contingency policy, which combined a sickness and accident contract with an endowment life assurance payable at death or at the date when the sickness insurance ceased.

Finally the Medical Insurance Agency (B.M.A. House, 1, Tavistock Square) had a stand at which advice was given on all matters relating to insurance. In particular the advantages of the special policy for medical motorists were urged. The Agency has for many years made a careful study of this class of insurance, which necessarily interests almost every member of the profession, and the special policy referred to which is underwritten by a prominent group of underwriters at Lloyd's is confidently claimed as quite the best obtainable. In addition to the ordinary staff of the Agency a consulting motor engineer (of the firm of Mann Egerton and Company, Limited) was in attendance at the stand to give help and advice on the choice and upkeep of cars. Another feature of the Agency which was stressed was the charitable side of its work. Each year the Committee of Management is able to support financially the benevolent funds of the profession. A total of just upon £18,000 in the form of grants has been made through this medium to the various charities.

Thus ends our survey of one of the largest most varied, and most attractive exhibitions ever held under the auspices of the Association.

## Meetings of Branches and Divisions

### LEINSTER BRANCH

A MEETING of the Leinster Branch was held at the Irish Office, 16 South Frederick Street, Dublin on July 28th.

On the motion of Dr. PEARCE, seconded by Dr. ROWLETTE, a committee consisting of Drs. MacElean, Quinn, McCann, and the president, the secretary, and Dr. Hennessey (ex-officio) member, was appointed to consider getting in touch with new graduates in order to induce them to join the Association.

After discussion it was unanimously agreed that the representative of the Leinster Branch on the Council of the Association be authorized to inform the Council that the Branch has in contemplation the holding of an annual meeting of the Association to hold the Annual Meeting in Dublin in 1931 and that the Branch is taking steps to secure the co-operation of the University, Royal College, and other bodies. It is hoped to be able to secure a co-operation at a later date and to elect a definite representative.

The names of several leading members of the profession in Great Britain were directed to be sent to the head office with a suggestion that one of them should give a lecture to the Branch.

It was agreed to leave the reorganization of the Divisions in the Branch to the Committee formed to consider the means of increasing the membership of the Branch.

On the proposition of Dr. POWELL, seconded by Sir JAMES CRAIG the following motion was adopted:

That the Leinster Branch of the British Medical Association has learned with regret that the vacancy on the General Purposes Board

created by the retirement of Dr McCormack has not been filled in the opinion of the Board it is desirable that in the administration of the prisons full influence should be given to the medical and scientific point of view, and such influence can only be maintained by appointing on the General Prisons Board a medical member possessing equal authority with the other members of the Board. Six new members were elected.

#### OXFORD AND READING BRANCH

At the annual meeting of the Oxford and Reading Branch, held at the Osier Pavilion, Headington, the following officers were elected.

President Dr Sidney Clifford Vice President, Dr Charles Honorary Secretary, Dr J G Bird

At a subsequent clinical meeting Dr W Stobie showed many cases of tuberculosis under treatment at the Pavilion. The meeting was very successful, and Dr Stobie's demonstration of the various methods of treatment in use was much appreciated.

#### BOOKS ADDED TO THE LIBRARY

The following books were received by the Library during the months of June and July, 1927.

- Alexander, J. The Surgery of Tuberculosis 1925  
American Gynecological Association Transactions, vol 51, and Index, vols 159-1926  
Barton and later Symptom Diagnosis 1927  
Brauer, A. Woman 1927  
Bedford, T G. Practical Physics 1927

#### GENERAL MEDICAL COUNCIL

##### EXECUTIVE COMMITTEE

The minutes of a meeting of the Executive Committee of the General Medical Council, held on July 25th, when Sir DONALD MACALISTER was in the chair, have been published.

##### Threatened Expulsion of British Doctors from Madeira

Correspondence was laid before the Committee relating to a report which had reached the Foreign Office that the Portuguese authorities in Madeira had been threatening to expel British doctors from the island. The situation appears to have arisen out of a protest made by the association of Portuguese doctors against certain foreign doctors practising in Funchal, Madeira, without being legally qualified to do so. The British Ambassador in Lisbon stated that the present position of foreign doctors in Portugal is that, in order to exercise their profession in that country, they must acquire a medical licence by passing an examination for the degree of doctor and paying a sum of esudos 3,000 (about £300), corresponding to the fees of the ordinary Portuguese students. In 1866, when some similar trouble arose, the Portuguese Government agreed to suspend the law in favour of the British doctors then in Madeira, but the Ambassador points out that this was a favour of the Portuguese Government, and any exemption from the legal requirements could only be requested as a favour again. It was stated by the British Consul at Funchal that the four British doctors practising in Madeira only treat visitors, and are careful not to accept Portuguese patients. By direction of the President of the General Medical Council a letter was sent to the clerk of the Privy Council repeating the terms of Section 6 of the Medical Act, 1859, and adding that Portuguese doctors were not forbidden to practise in the United Kingdom nor to accept British subjects as patients, and that if British doctors who practised only amongst visitors were expelled from Madeira a hardship would be inflicted upon them which would not be experienced by Portuguese doctors who desired to practise in this country. The last word in the correspondence is a letter written on behalf of the Secretary of State for Foreign Affairs requesting the British Ambassador in Lisbon to keep a close watch on the matter, and, should occasion at any moment require it, to address representations to the subject to the Portuguese Government.

##### British Practitioners in Spain

The Registrar reported to the Committee that a medical woman holding British qualifications had expressed a desire to practise in Spain. A communication had thereupon been addressed to the British Ambassador at Madrid, informing him that, although reciprocity in regard to medical practice had not been established between the two countries, and consequently Spanish qualifications could not be recognized as entitling their holders to registration, it was open to the licensing authorities in this country to admit foreigners who were qualified in their own country to examinations in the United Kingdom under such terms as they might think fit. Also that the holder of a degree from a reputable Spanish university would be admitted to the final examination of the English Conjoint Board without further curriculum. It was suggested that this British doctor might be accorded a similar privilege in Spain. The Spanish Government replied that it was unable to grant reciprocal treatment in view of the absence of any definite convention between the Spanish and British Governments. To give the desired permission to this applicant to practise in Spain on the understanding that she passed the examination of "Revalida" equivalent to the final examination in this country, would be contrary to the provisions of the Royal Decree Law as set forth in 1925. But it was added that

it should confirm the given of the statement just quoted. Admission to a final examination in England the Spanish Government might accede to the request of this body and grant reciprocity of treatment regarding duly qualified British practitioners who desired to practise in Spain. The President of the Central Medical Council therefore gave instructions for the order to be sent confirming officially the statement that the holders of the degree of M.D. obtained in the Universities of Madrid, Salamanca, and Seville would be entitled to it for the final or qualifying examination of the Conjoint Board without taking any further course of study or examination and the passing of such examination would entitle them to registration. The letter also requested that persons in the British *Register* might be similarly permitted without further study or examination in Spain to offer themselves for the examination of Revahid. There for the moment the matter rests.

#### Legislation in Colonies and Mandated Territories

A bill making provision for the registration of medical practitioners which has been introduced into the Legislative Assembly of Southern Rhodesia was reported to the Committee. The Registrar pointed out that in the bill there did not appear to be any express provision for the recognition of British diplomas or diplomas entitled to registration in the *Medical Register*, but it was provided that foreign diplomas should not be recognized unless the requirements for obtaining them were not lower than those prescribed by the Central Medical Council and that they were obtained in a country with which reciprocity with Great Britain had been established. The Committee resolved to inform the Dominions Office that it was gratified to observe that provision had been made in Southern Rhodesia for the prohibition of unqualified practice but that in its opinion the measure should be amended to indicate that those who were registered or entitled to be registered in the *Medical Register* of the United Kingdom were entitled to registration in Southern Rhodesia.

A draft ordinance to regulate the practice of medicine in Palestine was also before the Committee. The Committee took exception to a provision therein which permitted the publication of a notice that a medical practitioner had established a practice. The passage to which exception was taken read as follows:

Nothing in this section shall be deemed to prevent a medical practitioner from indicating the situation of his professional premises by a plate fixed thereon bearing in plain and unambiguous English, and in hours of consultation or from publishing a notice that he has established a practice or changed his address.

The Committee also suggested that in the provision that Nothing in this ordinance shall prevent a nurse from working under the supervision of a medical practitioner the words direct personal should be inserted before superior.

#### London Public Medical Service

The Committee considered a communication from the London and 1 Counties Medical Protection Society forwarding papers relating to the London Public Medical Service and asking whether the procedure indicated therein was likely to be regarded as contravening the Warning Notice of the Council in regard to advertising. The Service is designed to provide ordinary medical attendance with medicine at home or at the surgery to persons who do not come within the terms of the Insurance Acts and find it difficult to pay the usual medical charges. The subscription is to be collected at the house by an officer of the Service, and the subscriber might apply for acceptance to any doctor who is a member of the Service. One sentence in the terms of service runs as follows:

While collectors may not canvas in the accepted sense of the term there is a species of legitimate canvassing in which they might well be instructed and we are of the opinion that the Secretary should be instructed to so instruct the collectors of the Service.

This appeared under the heading of propaganda. The Ministry of Health had also asked what view the Council might take as to broadcasting notices about the Service in view of a statement by the Central Committee of Management that it was intended to apply for broadcasting facilities. The reply sent by direction of the President of the General Medical Council to the interrogating society (a copy of which was forwarded to the Ministry of Health) was as follows:

The proposed method of advertising etc. appear to be contrary to the Warning Notice No. 6 as regards (a) a practitioner being associated with or employed by those who procure or auction advertising or publication for the purpose of obtaining patients and as regards (b) employing any agent for the purpose of obtaining patients or being associated with those who sanction such employment. It is therefore not possible to say that the scheme proposed may not bring its members within the habitable forth in the Warning Notice.

#### Medical Education in India

The Committee welcomed back Sir Norman Walker and Colonel R. A. Needham on the conclusion of their tour in

India. Sir Norman Walker's report to the Secretary of State is summarized in the *Lancet* this week (p. 312). A number of reports on the various universities and medical colleges were placed before the Committee some of them by Sir Norman Walker and Colonel Needham jointly, and others by Colonel Needham alone. In reporting with regard to the universities of Bombay, Punjab (Lahore), and Lucknow the recognition of whose M.B. B.S. degrees has been extended from year to year, Colonel Needham stated that substantial progress had been made towards meeting the requirements of the Council though much remained to be done before all the requirements were fulfilled or the standards of medical education and professional examinations raised to the desired level. He presented a special report on the University of Calcutta recognition of its degree automatically terminated in 1924, but new regulations complying in substance with the recommendations of the Council have lately been adopted. The Committee resolved that in the event of Calcutta making its new regulations immediately applicable to existing students of the first to the fourth years an application for recognition might be considered on receipt of a satisfactory report on the conduct of the first final examination. It deterred consideration of an application for the degrees of M.B. B.S. Patna and refused to accede to a similar application from the Andhra University (Vizagapatnam Medical College) a new college which is still according to the report of the inspectors having to face initial difficulties of construction and staff.

#### Other Business

The Committee expressed itself in favour of the granting of the petition of the College of Nursing for a charter. It also acceded to an application from Henry Bown, registered M.R.C.S. Eng. 1926 L.R.C.P. Lond. 1926 for the removal of his name from the *Medical Register* on the ground that he had ceased to practise.

## Naval and Military Appointments

### ROYAL NAVAL MEDICAL SERVICE

Surgeon Commanders A. J. Tozer to the *Marlborough*, C. F. O. Sankey to the *Laurel*, C. M. R. Thatcher to the *Greenwich* on commission, H. L. Tiers to the *Victory* for *Queen Elizabeth* for trial, Surgeon Lieutenant Commander R. L. Rampling to the *Centaur* and as *Stander* in Medical Officer, Surgeon Lieutenant H. E. M. Martin to the *Spencer*, J. V. Williams to the *Greenwich* on commission.

### ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Lieutenant Commanders G. C. Clance to the *Fined* for R.N. Hospital Plymouth for fourteen days training, J. L. Rollason to the *Victory* for R.N. Hospital Harar for four days training, Surgeon Lieutenants L. E. Henderson to the *Peribroke* for R.N. Hospital Chatham for fourteen days training, August 3rd and to the *Benbow* for twenty-eight days training, August 11th R. W. H. Tincker to the *Peribroke* for R.N. Hospital Chatham for four days training.

Surgeon Sub-Lieutenant L. D. Nelson to be Surgeon Lieutenant, Late temporary Surgeon R. D. A. Imlie has entered as Surgeon Lieutenant (seniority February 20th 1923) and attached to the London Division.

Probationary Surgeon Lieutenant P. E. Stabler to be Surgeon Lieutenant with seniority of June 1st 1926, Probationary Surgeon Lieutenant W. T. Donnan to the *Tiger* for twenty-eight days training.

Probationary Surgeon Sub-Lieutenant F. T. Doleman's appointment to the *Victory* for Harar Hospital for training is cancelled.

Probationary Surgeon Sub-Lieutenant A. B. Thomas to be Surgeon Sub-Lieutenant with seniority July 2nd 1926.

Probationary Surgeon Sub-Lieutenant H. S. Waters to the *Yarmouth* for twenty-eight days training.

A. F. Davey to be probationary Surgeon Sub-Lieutenant and attached to the London Division.

### ROYAL AUSTRALIAN NAVY

Surgeon Commanders W. E. Rowlands to the *Victory* for Harar Hospital, L. S. Macfarlane to the *Victory* for R. Barracas temporary supernumerary.

### ROYAL ARMY MEDICAL CORPS

Major E. A. Strachan appointed Physician and Surgeon to the Royal Hospital Chelsea, Vice Major E. T. Poit, C.M.G., D.S.O. who has vacated the appointment.

Captain J. M. Macfie M.C. to be Major, Captain H. V. Stafford M.C. to be Major November 8th 1926 (Substituted for notification in the *London Gazette* November 8th 1926).

Captain H. R. L. E. Strang O.B.E. half pay his late R.A.M.C. on completion of a period of six years on the half pay his rates on retired pay on account of ill health July 15th 1927 and is granted the rank of Major (Substituted for notification in the *London Gazette* July 15th 1927).

Captain F. A. L. E. Strang to be Major (prov.) with precedence next below K. M. Nelson M.C.

Cap. W. G. D. McCall M.C. to be Major (prov.)

The following to be Lieutenants on probation: J. M. Quinlan L. R. S. Macfarlane M. F. N. Grinn J. J. O'Dwyer W. F. Lane Temporary Lieutenant de L. Carey and relinquishes the temporary rank of Lieutenant Temporary Lieutenant H. A. Ferguson and relinquishes the temporary rank of Lieutenant J. H. Anderson M. G. de Liff, Sturm D. B. O'Sullivan Beare.

The following are seconded under the provisions of Article 250 Royal Warrant for Pay and Promotion 1925: J. M. Quinlan, L. R. S. Macfarlane, J. H. Anderson.

## ROYAL AIR FORCE MEDICAL SERVICE

Squadron Leader T McClarkin, MC, to Pathological Laboratory, Hilton  
Flight Lieutenant A S Iwing to R.A.F. Hospital, Halton  
Flying Officer J Hill to R.A.F. Hospital, Halton

## INDIAN MEDICAL SERVICE

The services of Major L H Khan are placed at the disposal of the Government of the Central Provinces, temporarily, for employment in the Jail Department

Major W J Simpson, Agency Surgeon in Bhopal, is appointed to officiate as Political Agent in Bhopal in addition to his own duties  
Lieut Colonels L O Thurston and F G N Stokes have retired from the service

Lieutenant E G Michelson to be Captain  
The provisional promotion of G H Fitzgerald to the rank of Captain, dated May 30th, 1925 is confirmed

## REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS  
Lieutenant C W Simpson from R.A. Regular Army Reserve of Officers, to be Lieutenant, retaining his present seniority

## TERRITORIAL FORCE

ROYAL ARMY MEDICAL CORPS  
Lieut Colonel H W Symons resigns his commission and is granted the rank of Major

Captain J Cohen from Hygiene Companies to be Captain with precedence as from January 30th 1916

Lieutenant A H Macklin OBE, MC, to be Captain with precedence as from July 31st 1926  
to be Lieutenants E J G Class (late Officer Cadet Edinburgh University Contingent Senior Division, OTC), F Tishman, J N Russell, M S Scott, I Heywood Jones

## VACANCIES

ABERYSTWYTH INFIRMARY AND CARDIGANSHIRE GENERAL HOSPITAL—House Surgeon (male) Salary £100 per annum

BATH ROYAL MINERAL WATER HOSPITAL—(1) Physician (2) Resident Medical Officer minimum salary at the rate of £150 per annum

BEYFORD COLONY HOSPITAL—Assistant House Surgeon (male, unmarried) Salary at the rate of £120 per annum

BIRMINGHAM CITY—Medical Officer of Health Salary £1830 per annum

BOOTHBY HONORARY HOSPITAL—(1) Senior Medical Officer (2) Two Junior Medical Officers (males) Salary £150 and £125 per annum respectively

BRIGHTON GENERAL HOSPITAL—(1) Two House Physicians (2) House Surgeon (3) Resident Obstetric Officer (4) House Surgeon to Special Departments (5) Casualty House Surgeon Salary at the rate of £80 per annum rising to £100 in the event of a second appointment

BRISTOL ROYAL INFIRMARY—(1) Two House Physicians (2) Four House Surgeons (3) House Surgeon to the Ear, Nose and Throat Department (4) House Surgeon to the Gynaecological, Ophthalmic and Dermatological Departments (5) Obstetric House Physician (6) Casualty House Surgeon Salary at the rate of £80 per annum or £100 if candidate has previously held a resident appointment in the Infirmary

CARDIGANSHIRE AND ANGLESEA INFIRMARY, Bangor—House Surgeon Salary £200 per annum

CITY OF LONDON MATERNITY HOSPITAL, City Road E.C.1—(1) Assistant Resident Medical Officer salary at the rate of £80 per annum for three months rising to £100 if elected Senior (2) Registrar, honorarium £100 per annum (3) Honorary Dental Surgeon

DORSET COUNTY HOSPITAL, Dorchester—House Surgeon Salary £120 per annum

DIYAFRICA MEDICAL SERVICE—Medical Officer as an Assistant Bacteriologist Salary £300 per annum rising to £340 and thence subject to efficiency bar to £320

EXETER ROYAL DEVON AND EXETER HOSPITAL—House Surgeon (male) Salary at the rate of £130 per annum

HULL ROYAL HULL INFIRMARY—Resident Surgical Officer (male, unmarried) Salary £250 per annum

HOVE HOSPITAL, Sackville Road Hove—Resident Medical Officer (male, unmarried) Salary £150 per annum

JEWELL MATERNITY HOSPITAL, Underwood Street E.1—Honorary Assistant Obstetric Surgeon

JOHNSTON UNIVERSITY OF WATERSFORD—Senior Lectureship in Physiology Salary £516 per annum rising to £726

KETERING AND DISTRICT GENERAL HOSPITAL—Resident Medical Officer (male) Salary £175 per annum

##### Prizes for Essays by Medical Students 1928 and 1929

THE Council of the British Medical Association proposes to award in March, 1928 prize of £10 each for the best essays by final year medical students on "What are the evidences of heart failure. Describe signs and symptoms of any three cases personally examined. One prize will be given in each of the following group of medical schools:

Group 1—University of Aberdeen University of St Andrews (University College Dundee)

Group 2—Queen's University of Belfast University of Dublin (Trinity College) National University of Ireland (University College Cork University College Dublin University College Galway) Royal College of Surgeons in Ireland (Schools of Surgery)

Group 3—University of Birmingham University of Bristol University of Wales

Group 4—University of Durham University of Leeds University of Sheffield

Group 5—University of Edinburgh School of Medicine of the Royal College

Group 6—University of Glasgow Anderson College of Medicine Queen's College School of Medicine of Women St Mungo's College

Group 7—University of Liverpool Victoria University of Manchester

Group 8—University of London Charing Cross Hospital Medical School King's College Hospital Medical School

Group 9—University of London Guy's Hospital Medical School London Hospital Medical College

Group 10—University of London (Post Free Hospital) School of Medicine for Women University College Hospital Medical School

Group 11—University of London Middlesex Hospital Medical School St Mary's Hospital Medical School

Group 12—University of London St Bartholomew's Hospital Medical College St George's Hospital Medical School

Group 13—University of London St Thomas's Hospital Medical School Westminster Hospital Medical School

Group 14—Medical Schools in the British Empire outside the United Kingdom

The prizes will be awarded to the authors of the essays declared to be the best sent in from the respective group but if no essay received from a group is considered deserving of a prize no prize will be awarded in respect of that group. The essay, which must not exceed 5,000 words should be clinical in nature and must include concise notes of three cases personally observed by the student. Essays should be plainly written or typed on fool-cap paper (one side only) and must reach the Medical Secretary, British Medical Association House, Tavistock Square, W.C.1, not later than January 14th, 1928. Each essay must be signed by a pseudonym only and be accompanied by a signed and dated statement that the essay has been the bona fide work of the competitor and that he or she has no vetting of the final professional examination together with particulars of his or her full name, pseudonym, address

and medical school. The essays received will be adjudicated on by examiners appointed by the Council from among members of the Association not resident in the area of the particular group. The decision of the Council will be final.

Notices as to the competition have been sent to the deans of the medical schools with a request for their exhibition on the notice boards, as well as to those hospitals concerned with the education of medical students and to the honorary secretaries of the Divisions and Branches of the Association in whose areas the respective schools are situated.

##### Subject for Essay 1929

The subject for the essay for similar prizes to be awarded in March 1929 (essays to be received by mid January 1929), will be "The symptoms and changes of encephalitis lethargica with their appropriate treatment." Further particulars of the 1929 competition will be announced in due course.

##### Medical Appointments Abroad

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

**The Half-yearly Indexes**

The usual half-yearly indexes to the *JOURNAL* and to the *SUPPLEMENT* and *EPITOME* have been printed, they will, however, not be issued with all copies of the *JOURNAL*, but only to those readers who ask for them. Any member or subscriber who desires to have one or all of the indexes can obtain what he wants, post free, by sending a postcard notifying his desire to the Financial Secretary and Business Manager, British Medical Association House, Tavistock Square, W.C.1. Those wishing to receive the indexes regularly as published should intimate this desire together.

**Association Notices.****BRANCH AND DIVISION MEETINGS TO BE HELD**

**BORDER COUNTIES BRANCH DUMFRIES AND GALLOWAY DIVISION**—The next meeting of the Dumfries and Galloway Division will be held in the King's Arms Hotel, Stranraer, on Thursday, September 1st, at 3.30 p.m. Agenda: Correspondence, "Recent methods in the treatment of varicose ulcer of the leg," by Mr. P. A. McCreadie, F.R.C.S. Ed., discussion on the treatment of tuberculous glands in the neck, introduced by Dr. Macdonald Ross, demonstration of pathological specimens by Mr. G. R. Livingston, F.R.C.S. Ed. After the meeting the members will dine together.

**SUSSEX BRANCH BRIGHTON DIVISION**—A meeting of the Brighton Division will be held at the Queen's Road Dispensary on Thursday, September 1st, at 3.30 p.m. Agenda: Report of Representatives on Annual Edinburgh, report of Secretary on Edinburgh Charities Committee and other business. Address by Dr. Boud, C.B.E., on his visit to Paris for the Piel Centenary. The following is a list of meetings arranged for the coming season, 1927-28: Saturday, September 24th, 1927, at Chichester Heritage Friday, October 6th meeting with Sussex Law Society Wednesday, October 19th, Sussex County Hospital Thursday, November 17th, Children's Hospital Wednesday, December 14th, Poor Law Infirmary Thursday, January 19th, 1928, Sussex County Hospital Wednesday, February 15th, Sussex Eye Hospital Thursday March 15th, Children's Hospital Wednesday April 18th, Lady Chichester Hospital Thursday, May 17th, Brighton Borough Sanatorium Wednesday, June 20th, Sussex County Hospital. The dates of meetings with Dental Society pharmacists and teachers, and also of supper, will be notified later. A clinical meeting of the Division will be held at the Heritage, Chichester, on the afternoon of Saturday, September 24th. Members are invited to bring their wives, who will be conducted over the Heritage during the clinical meeting. By the kindness of Mrs. Kimmins tea will be provided. A detailed programme will be announced later. Members intending to be present are requested to inform the honorary secretary as early as possible, also any members desiring to be taken by car are requested to write to the secretary, as there are plenty of seats available.

**Meetings of Branches and Divisions****BORDER COUNTIES BRANCH**

The annual general meeting of the Border Counties Branch was held at the Crown and White Hotel, Carlisle, on July 8th when Dr. P. M. KERR the retiring president was in the chair.

The Branch Council's annual report and financial statement was read and circulated, and names of office bearers for 1927-28 announced as follows:

*In absentia* Dr. J. R. Burnett *President Elect*, Dr. John Ritchie *Vice President*, Dr. P. M. Kerr (two years) *Mr. Norman MacLaren* (one year) *Honorary Secretary and Treasurer*, Dr. G. T. Wilkin.

Dr. P. M. Kerr, on vacating the chair, invested Dr. J. R. Burnett with the insignia of office and a very hearty vote of thanks to Dr. Kerr for his conduct of office of president for the past year was accorded with acclamation.

The meeting adjourned for tea thirty members and ladies partaking of the president's hospitality, after which Dr. Burnett gave his presidential address entitled "Some notes on the history and work of the St. John Ambulance Association."

The address was illustrated by a number of very interesting lantern slides, and the meeting ended with a very hearty vote of thanks to Dr. Burnett.

**NORTH WALES BRANCH**

The annual meeting of the North Wales Branch was held at the Grand Hotel, Penryn, on July 8th. It was agreed that the spring meeting, in 1928 should be held at Llandudno, and the summer meeting at Llangwyfan Sanatorium. The new President, Dr. J. R. WILLIAMS, J.P., took the chair. Dr. E. I. Spiggs was unanimously chosen president elect, and Dr. Lewys Lloyd secretary for 1927-28.

The members were entertained to lunch by the President at the Grand Hotel. In reply to Dr. J. R. PRITCHETT who proposed the "British Medical Association," Dr. ALFRED COX, the Medical Secretary, dwelt upon the work of the Association for all sections of the medical practice and cited the gift chair in the Great Hall

as a symbol of the unity of the whole profession at home and overseas. The address was much appreciated, several questions were answered by Dr. Cox, and a hearty vote of thanks was accorded to him for visiting the Branch.

A pleasant incident during the proceedings was the presentation of a silver cigarette box by Dr. Prythor, on behalf of the practitioners of Carnarvonshire and Anglesey, to Dr. Fenwick Jones, the tuberculosis officer, on his leaving the area to take charge of Llangwyfan Sanatorium.

**SOUTH WALES AND MONTMOUTHSHIRE BRANCH SWANSEA DIVISION**—At the annual meeting of the Swansea Division, held on June 23rd, the following officers were appointed:

*Chairman*, Dr. Daniel E. Evans. *Vice Chairman*, Dr. A. F. S. Sladden. *Honorary Secretaries*, Dr. Joseph Lloyd and Dr. F. H. K. Knight. *Representatives in Representative Body*, Dr. H. J. Jones. *Representative in Representative Body*, Dr. H. J. Jones. *Committee*, Dr. L. Freeman Marks. *Contract Practice Subcommittee*, Dr. Joseph Lloyd, Dr. L. Freeman Marks, and Dr. Horatio E. Rawlings.

Dr. J. M. Morris (North) was nominated president elect of the Branch.

**Correspondence.****Disciplinary Procedure**

SIR,—I have been reading with great interest the annual report of the Insurance Acts Committee (*SUPPLEMENT*, August 20th, p. 105) on the subject of disciplinary procedure and note that many minor grievances are likely to be redressed. Unless I have not read the report correctly, its many words intend to conceal the fact that the biggest grievance of all is left untouched. I refer to the procedure adopted to determine the appropriate penalty in cases which have been investigated by an inquiry committee under Part VI of the Regulations.

Perhaps I may be allowed to recite what now happens. The practitioner accused of some major delinquency is first heard by the Medical Service Subcommittee, the evidence not being on oath and often being very vague and diffuse. This Committee reports to the Insurance Committee for the county, which then becomes the prosecutor, and on its motion a court of inquiry is convened. Before this court the practitioner is arraigned. A barrister is in the chair, evidence is given on oath, and every attempt is made to give a fair hearing so far as the Minister allows. This is not very far, for the practitioner may not bring evidence of the way in which he ordinarily conducts his practice, nor may the court state whether he is or is not guilty, or whether there are features in the case which might move them, if permitted, to add to their report recommendations of any kind. The report of the inquiry committee is then referred to another committee (which for convenience I will call the Star Chamber), which is composed of Ministry officials and sits in private. This committee hears any new evidence which may come along from either side, and even hears expert evidence quite unknown to the practitioner—for example, expert evidence as to what is or is not suggestive of diphtheria or appendicitis, etc. This Star Chamber advises the Minister as to penalty. Sometimes he takes its advice, sometimes not. In the latter case he acts on his own initiative and imposes whatever penalty he sees fit. This is no exaggeration, and the Insurance Acts Committee no doubt knows the cases which are hinted at.

The above is the procedure to which the profession has taken chief objection. After the most careful study of the Insurance Acts Committee report I can find no certain evidence that this procedure is to be altered in any particular. One may, however, infer that occasionally in such cases the Star Chamber committee will be reinforced by one or more members taken from a list prepared by the Insurance Acts Committee. That is the utmost suggested, and the Minister is careful to state that he will not take the names on this list in rotation, and it also appears doubtful whether any part of the case which has a quasi-legal flavour will be permitted to be discussed.

It is exceedingly difficult to see in what way the profession will be assisted by this shadow of a remedy. Even if the Star Chamber committee does include a member of the Insurance Acts Committee it will still be permitted to hear new evidence, unknown to the practitioner. The Insurance Acts Committee member will not be in a position to object to what is very prevalent on the committee already condones. And what of the Insurance Committee or the approved society concerned? If we have a right to representatives sent to see that there is fair play to the practitioner, can we deny their right to similar representatives sitting to safeguard the insured person? Let us imagine a sitting of this Star Chamber committee. It will comprise a certain number of perfectly honest men—judicial men—trying to do their best. They will have before them the report of the Medical Service Subcommittee, usually unimpeached but judicial. Also the report of the Insurance Committee—frankly hostile majorities are not unknown on these committees.

Lieutenant J. A. Friedman to be Captain.  
Lieutenant J. Ledingham resigns his commission.  
Lieutenant J. O'Hara from the and (Island) Division Train  
R. S. C. to be Lieutenant with precedence as from October 2, 1916  
Subaltern for Service with OTC - Captain V. C. Penney to  
R. A. C. to be Lieutenant with precedence as from August 1, 1917  
for service with Medical Unit Cambridge University College  
Senior Division OTC and relinquishes the rank of Captain.

### British Medical Association.

#### CURRENT NOTES

##### South African Medical Congress March 1923.

THE first South African Medical Congress under the aegis of the Federal Council of the Medical Association (the South African (British Medical Association) is to be held in Bloemfontein in the week beginning March 12th 1923. A large number of American visitors are expected and our South African members would greatly appreciate the presence of a contingent from the parent body. To any members who may be contemplating a pleasure trip during the trying months of the English winter a visit to South Africa can be highly recommended and there will be combining an agreeable holiday with effective work for the Association if they will make Bloemfontein the objective of their journey. The Medical Secretary will be glad to bar from any member who is willing to consider the journey and to give any information and assistance that he can.

##### Working Urban District Council Medical Officer of Health

Owing to a misunderstanding which has now been removed as to the nature of this appointment attention was called to the proposed appointment of a medical officer of health under the Working Urban District Council among the Important Notices in our issue of September 3rd. We are glad to state that in view of explanations which have been given there is now no objection to this post, and it is advertised in our advertisement columns this week.

##### Women and the British Medical Association

At the end of 1926 (SUPPLEMENT, December 18th p 253) a note was published on an article contributed to the Medical Women's Federation News-Letter by Miss Sarah Gray, F.R.C.S.I., of Nottingham giving an account of the Annual Meeting in that town in 1892 when a resolution was adopted admitting women to the membership of the Association. Mrs Garrett Anderson had been admitted a member twenty three years earlier but shortly afterwards (1878) a rule excluding women was made. She, Dr Walker Dnabar of Clinton and Dr Sarah Gray herself were present at the meeting in Nottingham the last two as spectators in the gallery. It seems that at that date the suggestion to admit women had already taken shape in Australia, Mrs Laura Fowler (now Mrs Charles Hope) had graduated M.B. B.S. at the Adelaide University in 1891. At the suggestion of Dr London then Honorary Secretary of the Adelaide and South Australian Branch she in December of that year applied to be admitted a member of the British Medical Association but was told that the rules prohibited her election. In the following February the Branch held a meeting on this subject when a resolution was moved by Dr London and seconded by Dr (now Sir) Joseph Verco in favour of the admission of women (see South Australasian Medical Gazette, March, 1892). There was some opposition, and finally it was

resolved to take a plebiscite on the whole Branch. This was done and at a meeting of the Branch on March 24th, it was reported that 75 members out of a possible 26 had voted of the 75 who voted 40 were in favour 20 were untravelling and 9 professed indifference. Some correspondence ensued between Dr London as Honorary Secretary of the Branch and the General Secretary of the Association and owing to the long postal delays the matter had been decided at Nottingham. The matter was referred to in the annual report of the Central Council of the British Medical Association for 1892 when it was said that the question of the admission of women as members had again been brought forward by two of the Australian Branches. It was recalled that in 1876 a vote of the members had been taken 6 250 circulars were issued asking each member to say 'yes' or 'no' to the question whether medical women should be admitted as members out of 4 161 voting papers returned 3 072 were against the admission of women and 1 081 in favour. The report went on to quote the following passage from a letter received from the Honorary Secretary of the Adelaide and South Australia Branch. It was felt by some that it was a distinct hardship that women should be debarred from such membership as the colonial universities granted them degrees and put them on an even footing with men, it was not consistent therefore to refuse them admission to the meetings of the Association and Branches providing the Articles of the Association were altered to allow them to become members. The report also stated that at the Melbourne and Victoria Branch had resolved. That duly qualified medical women are eligible as members of the Victorian Branch of the British Medical Association subject to the approval of the Council of the Association. This section of the report of the Central Council concluded with the statement that as the previous decision of the whole Association was arrived at fourteen years ago the views of the majority may since have become modified, the Council had therefore decided to place the question before the meeting of the members during the Annual Meeting at Nottingham. It was at this meeting that the resolution admitting women was adopted. On October 12th, 1892 Dr Laura Fowler was elected a member of the British Medical Association and of its South Australian Branch. Whether she was the first woman to be elected a member of the British Medical Association under the new rule it would not now be easy to ascertain, but she must have been one of the earliest.

### Association Notices.

#### BRANCH AND DIVISION MEETINGS TO BE HELD

**LINCOLNSHIRE AND CHESHIRE BRANCH.** ASHTON UNDER LYNE DISTRICT.—A meeting of the Ashton under Lyne Division will be held in the George and Dragon Hotel Ashton on Friday September 16th at 8.30 p.m. A hot pot supper will be served. Agenda.—Report of Executive Committee as to the scale of minimum remuneration for public health medical officers and recommendation of Executive that the Division adopt a resolution under

its Ethical Rules report of representative to Representative Body,  
secretary's statement regarding payments by private patients in  
Lako Hospital

—Under the auspices of the University of Birmingham a series  
of postgraduate lectures (particulars of which are appended) will  
be held on six successive Fridays, at 3.30 p.m. at the Herefordshire  
General Hospital, beginning on Friday October 7th. It is hoped  
that every member of the Division will make an effort to attend.  
The fee for the course is two guineas. Tea will be provided.  
Applications should be made to the honorary secretary, Dr J. R.  
Bulman, Hill Side, Hereford

Oct. 7th Dr Wynn Chronic Arthritis and its Treatment.  
" 14th Dr Wilkinson The Significance of Blood Pressure Variations  
" 21st Mr G. P. Mills Some Common After Effects of Injury  
" 28th Dr Emmanuel Cardiac Irregularities  
Nov. 4th Dr Douglas Stanley Problems in the Diagnosis of Lung  
Diseases  
" 11th Mr Beclwith Whitehouse The Menstrual Function in  
Health and Disease

## Correspondence.

## Remuneration of Insurance Practitioners

Sir,—Many of us are impressed by the ever increasing  
demands made upon us by panel patients, and have an uneasy  
feeling that if the capitation fee of 9s was inadequate three  
years ago the time has now arrived when what we are  
receiving for our attendance upon panel patients verges on the  
ridiculous. To test the matter we have examined the record  
cards of all our patients whose names begin with the letter C.  
The number was 139

The cards showed from August 1st, 1926, to August 1st, 1927,  
387 surgery attendances and 131 visits. Now 139 patients  
at 9s per annum = £62 11s, 387 surgery attendances at  
2s = £38 14s, 131 visits at 4s = £26 4s, total £64 18s

From these figures it is apparent that we are not actually  
receiving 2s per surgery attendance or 4s per visit—a rate of  
remuneration that in pre-war days we should have considered  
very moderate

This is an ordinary semi rural practice, and our patients are  
not pampered, but our record cards are kept with meticulous  
care. If other practitioners who have confidence in the accuracy  
of their records also would analyse the figures for a group  
chosen haphazard, as by taking all names beginning with the  
same letter, and forward them for publication, we should soon  
see in what light we are justified in regarding the present  
capitation fee, and with little trouble to ourselves meet the  
demand of the Insurance Acts Committee for statistics

Our total panel is about 1500, but by this short cut, which  
occupied little more than an hour, we have satisfied ourselves  
that the capitation fee is in urgent need of revision.—W  
arc, etc,

Calne Wilts, Sept 2nd

A K JAMES

## THE MEDICAL REGISTER • UNTRACEABLE PRACTITIONERS.

We are requested by the Registrar of the General Medical Council to publish the following list of medical practitioners  
who have not replied to his inquiries as to the accuracy of their addresses. Anyone, wherever resident, who finds his or  
her name included in this list should communicate immediately with the Registrar of the General Medical Council,  
44, Hullam Street, Portland Place, London, W 1, otherwise the name will be omitted from the next issue of the Medical  
Register

#### CURRENT NOTES

##### The Autumn Dinner

THE Autumn Dinner of the Association will be held at the *Edwina VII Rooms, Hotel Victoria, Northumberland Avenue, London, W.C.2* on *Wednesday, October 12th* at *7 for 7.30 p.m.* This will be somewhat in the nature of a special occasion as in addition to many distinguished guests, the Association will entertain upon their retirement from office *Mr R. G. Hogarth*, the immediate Past-President, and also *Sir Robert Bolam* who has been Chairman of Council for the past seven years. Tickets which can be obtained from the Financial Secretary of the Association will be *10s. 6d.* each exclusive of wines and as it is certain that many applications will be received reservation should be made at once.

##### The Annual Handbook of the Association 1927-28.

THE *Annual Handbook* of the British Medical Association for 1927-28 is in preparation. When available copies can be had by members, gratis and post free on application to the Medical Secretary, British Medical Association House, Tavistock Square, W.C.1. To non-members the book will be on sale at *3s. 6d.* (post free *3s. 9d.*). Primarily intended as a book of reference for honorary secretaries and other workers of the Association the *Handbook* should prove of interest and assistance to all members. The new edition will be completely revised. It will contain the decisions of the Representative Body of the Association on matters of policy, particularly about medical charities, information as to the constitution of the Association, and as to the *BRITISH MEDICAL JOURNAL* (the circulation of which is now *36,750* copies weekly) and other publications of the Association, list of the members of the Council and central committees, officers and officials of the Association and other information regarding the work of the Association.

##### The Katherine Bishop Harman Prize.

IN April 1926 Mrs Katherine Bishop Harman M.B. B.S. Lond., presented to the Association the sum of *£1,090* for the establishment of a prize to be awarded by the Council for the encouragement of research into the disorders incident to maternity. The following are the regulations governing the award of the prize.

1. The purpose of the prize is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and child bearing. Its money value shall be the net annual income of the capital fund as this has accumulated during a period of two years. The first award shall be made in 1928 and essays must be forwarded to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, W.C.1, no later than December 31st 1927.

2. As a general rule the prize will be awarded for the essay which in an open competition is judged by the Council to be most helpful to the end for which the prize is established, and the Council may at its discretion either prescribe a special or limited subject for the competition or not leave to the competitors an individual selection of the work they wish to present, provided that this falls within the purpose of the prize. In every instance the award made by the Council shall be final.

3. Any medical practitioner registered in the British Empire is eligible to compete for the prize.

4. Should the Council on any of the elected dates decide that no justification for the award of the prize exist, the prize shall be offered again in the year next following this decision and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine.

5. Each essay must be typewritten or printed in the English language, must be distinguished by a motto and must be accompanied by a sealed envelop marked with the same motto and enclosing the candidate's name and address.

The Council has decided that no specific subject shall be prescribed for the Katherine Bishop Harman Prize Competition, 1928, but that competitors be left free to choose the work they wish to present provided that this falls within the regulations governing the prize.

##### Medical Appointments Abroad.

THE head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1 for any information that may be available regarding overseas appointments in which they may be interested.

##### British Medical Association Library

THE Association's library contains more than *50,000* volumes including books in all branches of medical literature. It is open on weekdays from *10 a.m. to 6.30 p.m.* (Saturdays from *10 a.m. to 2 p.m.*). The Librarian and his assistant are always ready to help members to find books or references. Besides the facilities afforded to members for consulting monographs, periodicals and works of reference in the library, books in all branches of medical literature and many in general science can be obtained on loan by members resident in the British Isles, free of charge (other than postage) from the lending department. The lending facilities include books on medicine, surgery, anatomy, physiology, bacteriology, dentistry, hygiene, obstetrics, and other branches of medical and surgical science, the subjects of biology, botany, chemistry, electricity, sanitary engineering, radiology, medico-legal questions, and noted firms, microcopy, physics, philosophy, zoology, technology, voyages and travels, and zoology. The books issued include latest editions, new books and new editions being made available as soon as possible after publication. Books are ordinarily kept for twenty-eight days. Communications as to the library and lending department should be addressed to the Librarian, British Medical Association House, Tavistock Square, London, W.C.1.

## Association Notices.

### BRANCH AND DIVISION MEETINGS TO BE HELD

**LANCASHIRE AND CHESHIRE BRANCH ASHTON UNDER LYNE DIVISION**—A meeting of the Ashton under Lyne Division will be held in the George and Dragon Hotel, Ashton, on Friday, September 16th, at 8.30 p.m. A "hot pot" supper will be served. Agenda: Report of Executive Committee as to the scale of minimum commencing salaries for public health medical officers, and recommendation of Executive that the Division adopt a resolution under its Ethical Rules, report of representative to Representative Body, secretary's statement regarding payments by private patients in Lake Hospital.

**NORTH OF ENGLAND BRANCH TYNESIDE DIVISION**—A dance will be held at the Waverley Ballroom, Whitley Bay, on Friday, October 28th. Tickets, 12s. 6d. each may be obtained from Dr. John Murray of 4, Albert Place, North Shields. The proceeds will be devoted to the charities supported by the British Medical Association.

**NORTH WALES BRANCH**—A joint meeting with the North Wales Division of the National Veterinary Medical Association will be held at the Queen Hotel, Chester, on Friday, September 30th at 5.30 p.m. Subject for discussion: "Skin affections transmissible from animals to man."

**SUSSEX BRANCH BRIGHTON DIVISION**—The Brighton Division will be held at the afternoon of Saturday, September 24th, to bring their wives, who will be conducted to the meeting. By the kindness of Mrs. Kimmins tea will be provided. A detailed programme will be announced later. Members intending to be present are requested to inform the honorary secretary as early as possible, also any members desiring to be taken by car are requested to write to the secretary, as there are plenty of seats available.

## National Insurance

### MEDICAL CERTIFICATION OF INCAPACITY OF INSURED PERSONS FOR WORK

THE Ministry of Health and the Scottish Board of Health have just issued, under the above title, a memorandum for the information of insurance medical practitioners. It is of the greatest importance that the contents of this memorandum should be noted by practitioners who are newly entering upon insurance work, or who have recently done so, as a proper understanding of the certification rules and an exact observance of them are essential, if there is to be an avoidance of serious and often disagreeable difficulties alike to the practitioner, and to his patient and the approved society of which he may be a member. Even the experienced insurance practitioner, aware as he is of these difficulties and disagreeable possibilities, may be in a better position to avoid them if he will remember the official interpretation of ambiguous phrases, and renew his acquaintance with those rules and directions for procedure which apply to circumstances of relatively rare occurrence, but which are none the less important in those circumstances.

The memorandum is drawn up under two main headings: first, the general meaning of the term "incapable of work," and second, the medical certification rules. The term "incapable of work" is unfortunate, but has to be used because it is the statutory phrase employed in the National Health Insurance Acts. A combination of common sense and experience has, however, led to an interpretation which is now commonly understood and accepted. An insured person is regarded as "incapable of work" through some specific disease or bodily or mental disablement when he is in such a condition that an attempt to work would be seriously prejudicial to his health. If it seems probable that he will soon be able to resume his usual or former occupation it is unreasonable to expect him to undertake any other form of work in the meantime, and in these circumstances, therefore, he may be properly certified, even though some other form of work might be more immediately possible. If, however, it is evident, either at the outset or at some subsequent period, that his condition is such as to incapacitate him permanently from following his usual occupation, but that he might perform

some other suitable kind of remunerative work, either at once or after a course of training, he cannot properly be certified as incapable of work, and it is for the approved society, rather than the practitioner, to determine how long the payment of sickness benefit should reasonably continue. Pregnancy gives rise to special difficulties, and there is a good deal of misapprehension on the part of patients and of those who give them advice in connexion with maternity centres, as well as on the part of some practitioners, with regard to its relation to incapacity for work. It is not the case that pregnancy by itself at any stage necessarily renders an insured woman incapable of work, or that there is any obligation to certify accordingly. Each case must be individually considered, regard being had not only to the patient's condition, but to the exact nature of the work which she would be expected to perform.

The official printed forms of certificates are well known, and the main certification rules are quite clear. All the particulars on the forms are material, and the description of the cause of incapacity should be stated as precisely as the practitioner's knowledge admits. It may be as well to remind the inexperienced practitioner that when he has signed the printed form this is just as definite a statement of fact by him as though he had written it all out with his own hand, and that any deliberate misstatement is not a mere "technical" offence, but one which is viewed very seriously, not only by the Ministry of Health, but also by the General Medical Council. The ordinary procedure need not be further referred to, but it may be useful to draw attention to a few of the special points mentioned in the memorandum.

With regard to First Certificates, "there is no obligation on the practitioner to issue the certificate if the patient does not ask for it." It sometimes saves trouble, nevertheless, to remind the patient of his right to claim. With regard to subsequent certificates, "In cases where the practitioner is satisfied that the patient, though not fit to resume work immediately, will be fit before a further certificate would next ordinarily be given," he should state in the appropriate place "the date on which the patient should come to see him again for the purpose of obtaining a Final Certificate." This requirement is often overlooked. With regard to the special intermediate certificates for prolonged chronic cases, which are often referred to by practitioners as "monthly certificates," these certificates "should not be given at intervals of so long as three weeks or a month if the patient is, in fact, being seen by the doctor more frequently." This, again, is often honoured in the breach rather than the observance. With regard to Final Certificates, "a Final Certificate must not be issued to an insured person after he has resumed work." It should be noted that "an insured person's right to a certificate is not affected by the fact that he may have a claim for compensation under the Workmen's Compensation Act."

The paragraphs of the memorandum with regard to (1) advice as to additional benefits, (2) exempt persons, (3) persons over 70 years of age, (4) certificates in respect of patients referred to the regional medical officer, are quoted below in full.

#### Advice as to Additional Benefits

20 Practitioners are required on the application of their insured patients to state on the next certificate issued any form of special medical or other treatment which they have advised the patient to obtain, in cases in which they are specifically informed by the society that it is in a position to defray or to contribute toward the cost of such treatment for its members. The obligation will arise in those cases only in which (i) the practitioner has advised the patient to obtain the treatment, (ii) the patient has agreed to him to state this fact on the certificate, and (iii) he has been officially informed (which will usually be by means of a notice handed to him by the patient at the time) that the society is in a position to resist the member. The obligations of a practitioner in this respect are limited to patients to whom certificates of

... are being issued and it is open to the practitioner to charge a fee for any special form of certificate a patient may require for production to his certifier.

It could be noted however that in the opinion of the practitioner an insured person requires ophthalmic treatment which is not within the scope of the practitioner's obligation. He is required under his Terms of Service to give a written invitation to that effect if so directed by the insured person. No special form is provided for the purpose and the practitioner is not entitled to accept a fee for furnishing a certificate of invitation. This obligation applies to all appropriate cases where certificates of incapacity are being issued or not.

#### Excerpt From

Practitioners are required to issue a certain certificate in respect of exempt persons. Such certificate will not be required of more than once in six months and the form for the purpose will be presented by the person who desires the certificate.

#### Persons over 70 years of age

An insured person over 70 years of age, although entitled to medical benefit, is not entitled to sickness and disablement benefits. Practitioners are therefore under no obligation to issue certificates to such persons. After January 2nd 1928 they will apply to insured persons over the age of 65 years.

#### Certificates in respect of Patients referred to the Regional Medical Officer

Cases brought to the notice of the dependent society that practitioners are under a misapprehension concerning their obligations with regard to the issue of certificates to insured patients equivalent to examination by the Regional Medical Officer. It is important to note that the responsibility of the Regional Medical Officer in respect of cases referred is confined to that of giving evidence and practising as respectively. The certifier is not thereby relieved of its responsibility for deciding whether or not a member of the society is entitled to benefit or is the practitioner's responsibility or the treatment of his patient or for the exercise of his own professional judgment on the question of incapacity for work in any way superseded. A practitioner is not therefore precluded from giving a certificate of incapacity to a person who has been stated by the regional medical officer to be capable of work if the practitioner is of opinion that the patient is in fact incapable of work.

Practitioners sometimes find that the officials or agents of approved societies approach them, or instruct their members to approach them, with a view to obtaining certificates on a particular day other than that on which the patient would ordinarily attend for treatment. Again, pressure is sometimes brought to bear upon practitioners by society officials to ante-date or post-date certificates for the convenience of the official or the society. It is essential that practitioners should resist any such practices and avoid any such irregularities. The Ministry and the Board of Health have drawn the attention of societies to these matters and may be relied upon to support practitioners with regard to them. It would be well if practitioners or secretaries of Local Committees would forward the complete particulars of any such cases to the Insurance Act Committee or the British Medical Association.

There is one important paragraph of the memorandum to which exception may well be taken. It is that which deals with the issue of certificates to patients whose right to claim treatment from him as insured persons the practitioner doubts, and in whose case therefore he acts in accordance with Clause 7 (2) of the Terms of Service. In these cases the practitioner charges a fee to the patient under such conditions that the fee may be easily returned or remitted if the patient afterwards substantiates his claim to treatment as an insured person. In these cases the practitioner is expressly prohibited from ordering any drug or appliance on the official form and those representatives of the Insurance Acts Committee who discuss this matter with the Ministry held that both logically and for administrative convenience, the official forms of certificate should not be used in these cases. The Ministry promised to consider the matter afresh and it is therefore a little surprising that without any further communication with the committee, then memorandum should state categorically that "the official certificates should accordingly be used in such cases as they would be in ordinary cases." It is of great value for practitioners to understand clearly, as they have hitherto been told (1) that in no circumstances may any fee whatever be charged

to an insured person for any service within the contract, and (2) that the official certificate forms are never to be used for anyone other than an insured person, and therefore that in any case in which the practitioner uses the forms he is precluded from saying that he did not know that the person to whom he issued them was an insured person. If the present official pronouncement remains unchallenged or unrevised the propositions can no longer be regarded as true and in some directions administrative simplicity will be displaced by confusion. Logically, in the circumstances indicated, if the patient is not to be regarded as an insured person in respect of the supply of medicines, it is difficult to understand why he should not be in the same position in respect to the issue of certificates. This matter is of real importance and, as the memorandum does not in any sense purport to be a legal definition by the Ministry, it is to be hoped that they may be further opportunity for consultation.

## Naval and Military Appointments

### ROYAL NAVAL MEDICAL SERVICE

Sir or Lieutenant Commander A. G. B. appointments to the War Office and the Admiralty. Dr. J. C. B. appointments to the War Office. Dr. J. H. N. appointments to the War Office. Dr. J. H. N. appointments to the War Office. Dr. J. H. N. appointments to the War Office.

### ROYAL ARMY MEDICAL SERVICE

Sir or Commander A. G. L. R. D. O. B. E. V. D. to be Parities for four in law training. Dr. T. C. S. appointments to the War Office. Dr. T. C. S. appointments to the War Office. Dr. T. C. S. appointments to the War Office.

### ROYAL ARMY MEDICAL CORPS

Major J. A. Clark M.B.E. retire on retired pay and granted as rank of Lieutenant Colonel. Captain J. W. Male M.B.E. IC to be Major (prov). Captain G. A. Maurice D.S.O. MC to be Major (prov) and remains second. Captain Percival William late W. African Medical Service to be temporary Lieutenant and temporarily relinquishes the rank of Captain.

### ROYAL AIR FORCE MEDICAL SERVICE

Squadron Leaders P. H. Young to Headquarters Coastal Area D. McLaren to Hospital Orderly Training Depot. Halton Flight Lieutenant G. J. Griffiths to Base Combined Hospital Flying Officer J. M. Ritt to Base Laboratory and Medical Officers School of Instruction on appointment to a short service commission.

### REGULAR ARMY RESERVE OF OFFICERS

Colonel W. E. Hull on CMG C.B.E. D.S.O. late R.A.M.C. having attained the age limit of liability to recall cases to belong to the Reserve of Officers.

### ROYAL ARMY MEDICAL CORPS

Lieut-Colonels R. L. Argle H.L.W. Worthington D.S.O. and J. H. R. Ward D.S.O. having attained the age limit of liability to recall cases to belong to the Reserve of Officers. Second Lieutenant W. H. Scriven from Reserve of Officers R.A. to be Lieutenant.

## VACANCIES

London. Lord Mayor's Police Hospital—Second Assistant Resident Medical Officer (male unmarried) Salary £200 per annum rising to £250.  
Bournemouth. Royal Victoria L.D. West Hants Hospital—Two House-Surgeons (male, British nationality) Salary £120 per annum (male) £150 per annum (female) £100 per annum—House-Surgeon (male) £150 per annum (female) £100 per annum.  
Barnstaple. Royal Devon and Exeter Hospital—(1) House-Surgeon (male) salary £150 per annum (2) Honorary Surgical Clinical Assistant (1) Honorary Clinical Assistant on the Ophthalmic Department (1) Honorary Medical Clinical Assistant.  
Bristol. Gloucester County Hospital—Assistant School Medical Officer Salary £100 per annum.  
Cardiff. Adden Cote Hospital—Casualty Officer and Resident Anaesthetist (male) Salary £120 per annum.  
Central London Ophthalmic Hospital—Judd Senior W.C.I.—Senior and Junior House-Surgeons Salaries at the rate of £100 and £50 per annum respectively.  
Dumfries. Dumfries Royal Medical Hospital—Assistant Physician (male unmarried) Salary £100 per annum.  
Dundee. Dundee Royal Infirmary—Assistant Surgeon.  
Evelina Hospital for Children—Southwark S.E.1—House Physician (male) Salary £120 per annum.  
Hull. Hull Royal Infirmary—Third House-Surgeon (male unmarried) Salary £50 per annum.  
Hospital for Sick Children—Great Ormond Street W.C.1—(1) House-Surgeon (2) House-Physician and Assistant Casualty Officer Salary £50 for 12 months each.  
Islington. East Suffolk and Ipswich Hospital—House-Physician and two House-Surgeons Salaries at the rate of £100 per annum each.  
Jamaica General Hospital—C.D. Poor Law Infirmary—Resident Medical Officer (male) Salary £200 per annum.  
Kingston. Two Hills Incorporation for the Poor—Male Resident Medical Officer for the Institution and Infirmary Salary £200 per annum rising to £250.

#### TERMS OF SERVICE OF INSURANCE PRACTITIONERS

##### NEW PROCEDURE AS TO CHANGE OF DOCTOR

THE Ministry of Health has issued a new regulation—namely the National Health Insurance Medical Benefit Amendment Regulations (No. 3) 1927—which has been made by him after consultation with the Insurance Acts Committee of the British Medical Association as representative of the joint body of insurance practitioners.

Under the powers conferred on them by Clause 2 of Part I of the First Schedule to the National Health Insurance Medical Benefit Consolidated Regulations 1924, the Insurance Committee is empowered with effect from October 1st next to alter and modify the Terms of Service of practitioners who are under contract with them and on and after that date the provisions of the regulations will form part of the terms and conditions on which insurance practice is carried on in each Insurance Committee's area and in so far as they affect the rights and obligations of insurance practitioners shall be deemed to form part of the practitioner's terms of service.

As from October 1st 1927 an insured person who is not included in the list of an insurance practitioner's district in which he is residing and who desires to apply for acceptance by another practitioner may either transfer in the consent of both practitioners notified by their signatures on the appropriate space of the medical card or with the authorization of the Insurance Committee which will be given as a matter of right but with effect only after the expiry of fourteen days after application. Under this latter alternative the insured person must send to the Insurance Committee his medical card with a letter stating his intention to transfer and the medical card will be returned to him with a slip attached authorizing transfer after the approved date. This slip should be completed by the insured person and signed and dated by the practitioner accepting him for treatment. The card with the slip attached should then be forwarded by the practitioner to the Committee. Acceptance cannot be registered until the date named and in the meantime the insured person should continue to obtain treatment from the former practitioner.

A new form of medical card is being prepared which will contain instructions as to the new procedure but it is not possible for reasons of economy to make a general issue of new cards to all insured persons. Cases will therefore occur in which insured persons in possession of old medical cards will apply as at present for acceptance by a new practitioner. In such cases the practitioner is required to inform the insured person that if he is already on the list of another practitioner in the district it is necessary that he should obtain either the written consent or the letter of the transfer or the authorization of the Insurance Committee. The practitioner on whose list the insured person is included can give his consent in cases

where old cards are presented by writing across Part A the word "I consent to transfer" and appending his signature and the date. The insured person and the new practitioner should then complete Part B. The new style of medical card will provide a space Part C to be completed by both practitioners in cases where transfer is made by consent.

To assist Insurance Committees in bringing the change of procedure to the notice of insured persons a poster containing the new instructions has been prepared and practitioners will be asked to exhibit it in a prominent place in their waiting rooms. Copies of this poster will be obtainable on application to the appropriate Insurance Committee.

The new regulation does not in any way affect the existing procedure regarding the acceptance of persons not already on the list of another practitioner practicing in the same district of temporary residents or of persons on the lists of approved institutions.

The text of the new regulation is printed below.

##### The Amended Regulation

15—(1) An insured person other than a member of an institution or a person on whom a permit is required to make his own arrangements for obtaining treatment may at any time make application for acceptance by an insurance practitioner notwithstanding that he is at the date of application included in the list of another practitioner and if accepted shall forthwith be entitled to obtain treatment from the practitioner to whom application has been made.

Provided that if the insured person at the date of the application included in the list of another practitioner and has not removed permanently or temporarily outside the district within which the practitioner has undertaken to provide treatment the application of such insured person shall only be accepted if either

- both the practitioner in whose list the insured person is included and the practitioner to whom he applies for acceptance consent to the transfer and such consent is signified by the practitioners in accordance with the instructions printed on the medical card; or
- the insured person has forwarded to the Committee his medical card together with a notice of his desire to transfer and not less than fourteen days after such notice is received by the Committee the insured person and the practitioner to whom he proposes to transfer have signed a statement in a form approved by the Minister and used by the Committee indicating the agreement of the insured person and the practitioner that the transfer should be effected which form shall be attached to the medical card by the Committee.

#### CHESEBURY LOCAL MEDICAL AND PANEL COMMITTEE

##### Presentations to Dr. J. H. Marsh

On September 14th a luncheon was held at the Northwich by the Local Medical and Panel Committee of the County Palatine of Chester in honour of Dr. J. H. Marsh, J.P., who was unfortunately prevented by illness from attending. Dr. Marsh who is medical officer of health for the borough of Macclesfield has been a member of the Committee for ten years and in recognition of this a testimonial has been presented to him consisting of an oak bookcase, a library chair and an illuminated address.

showing the staff of Aesculapius surmounting the three wheat sheaves of Cheshire and flanked by fasces emblematical of the disciplinary functions of the Panel Committee. The address also carries the arms of Macclesfield upon mulberry leaves, symbolizing the silk industry, a hand tying a left handed knot, in recognition of his surgical prowess, and designations of surgical instruments and of the herbal origins of belladonna and digitalis. Mrs Marsh was given a minute Japanese garden in a porcelain tray, with dwarf marsh plants and trees—a *jeu d'esprit* upon her surname—and a pool with fish. Speaking at the conclusion of the complimentary luncheon, Dr L GRANT commented on the fine qualities of chairmanship shown by Dr Marsh, and added that he combined an acute, incisive intellect with tact, patience, fearlessness, and excellent judgement. Dr LIONEL PICTON, honorary secretary of the Committee, paid tribute to Dr Marsh's sterling qualities, and in particular his broad humanity. Sir WILLIAM HODGSON, J.P., chairman of the Cheshire County Council, who took the chair at the luncheon, referred warmly to his close association with Dr Marsh for many years, and paid a high tribute to his steadfastness in fulfilling all the obligations of his professional and public work. Dr Marsh, he added, had never sacrificed his principles in any circumstances, and the work he had done had stood the test of time. Sir William Hodgson afterwards entertained the guests to tea at the County Council School of Agriculture, at Reaseheath. Visits were paid to the cow houses at milking time, in order to see the methods used in producing milk of such a low bacteriological count that its keeping powers obviated the necessity for preservative or sterilizing treatment.

#### MIDDLESEX PANEL COMMITTEE

A MEETING of the Middlesex Panel Committee was held in the House of the British Medical Association, Tavistock Square, on September 8th, Dr BRACKENBURY, the re-elected chairman, presiding. Dr Brackenbury and Dr C F T Scott were appointed as the Committee's representatives to the Conference of Panel Committees. Dr Rose, of Wendover, was nominated for the representation of Group N on the Insurance Acts Committee. A lengthy discussion followed upon the question of practitioners having the opportunity of supervising their patients in local hospitals. A motion was moved by Dr R GILLBARD that it was essential to consider the relation of practitioners to their patients as regards hospital treatment. At the suggestion of Dr RINGE it was expanded to contain the proposal that practitioners so desiring should have access under reasonable conditions to their own patients for treatment in local hospitals. The motion thus enlarged was carried unanimously. Dr GILLBARD the Chairman and Dr C F T Scott emphasized the educational value to the younger practitioners of such facilities.

### Correspondence.

#### Remuneration of Insurance Practitioners

SIR,—Having kept an accurate record of the number of attendances and visits I have made each year to National Insurance patients, I now send you the following figures.

Following the lead of Drs Ede and James, in their letter published in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL of September 10th (p 126), I have calculated a visit as being remunerated at twice the amount of an attendance, and by dividing the total amount received, including mileage, by the number of attendances and visits during each year, I find the figures for the last five years to be as follows:

Year	Attendance s d	Visit s d
1922	2 9	5 6
1923	2 1	4 2
1924	1 8	3 4
1925	1 6	3 0
1926	1 4	2 8

The numbers on my panel have remained approximately the same during this period. My practice is semi-rural, about one third of the number live more than two miles from my residence, and the mileage paid to me in respect of these has been included in the calculation of the amounts per attendance and visit.

This clearly shows that demands by insured persons on doctors are steadily increasing, and that the present capitation fee is becoming more and more inadequate and needful of revision—I am, etc.,

Leominster, Sept 16th

GERARD STEEL

SIR,—I beg to submit the following statistics from my own cards. The total panel is about 1,800. The letter D was chosen, and the dates September 1st, 1926, to August 31st, 1927. There were 59 D cards. These showed 266 attendances and 168 visits. Remuneration at 9s per annum = £26 11s, remuneration at 2s per attendance and 4s per visit = £26 12s + £33 12s = £60 4s—I am, etc.,

SIR,—I have kept exact records of work done for patients insured under the National Health Insurance Act, and am, therefore, greatly interested to read the letter of Drs Ede and James in the SUPPLEMENT of September 10th (p 126), and to see how closely their remuneration for such work corresponds with mine, even though the two practices are separated by almost the complete length of the country, and mine would appear to be more rural in character.

During the year ending June 30th, 1927, the average number of insured persons on my list was 559. In respect of these there were 977 surgery attendances, and 956 visits were paid to the patients' homes.

During the same period I received £258 8s 11d from the Practitioners' Fund. Allowing 2s for each surgery attendance (£97 14s), the balance (£160 14s 11) provided 3s 4 35d for each visit paid.

Of the 956 visits, 723 were to patients who resided not less than two miles from my surgery. For these I received mileage grant amounting to £52 2s 2d, representing an additional 1s 5 3d for each such visit.

For dispensing I received £62 18s 1d, which affords 7 81d for each visit and surgery attendance. It should, however, be stated that the number of surgery attendances only includes those instances where the patient was actually seen, and does not include the numerous instances when "repeat" mixtures, etc., were dispensed without the patient attending personally—I am, etc.,

All the lectures will be held at the Great Bull Restaurant Westgate Wakefield. Garage accommodation will be available. Supper (2s. 6d.) at 7.45 p.m. will precede the lectures.

## Meetings of Branches and Divisions

**BORDER COUNTIES BRANCH DUMFRIES AND GALLOWAY DIVISION**—A well attended meeting of the Dumfries and Galloway Division was held in the King Arms Hotel Stranraer on September 1st. Mr. G. P. Liversidge F.R.C.S. Ed. the chairman presiding.

The HONORARY SECRETARY read a letter from the Medical Secretary regarding the appointment of an assistant school medical officer for Dumfrieshire where the salary offered is below the scale and it was unanimously agreed to support the Association in every way in its effort to have a satisfactory scale adopted.

Dr. Moyra Jun. showed a case of hypospadias in a girl aged 6 years weighing over 8 st. but bright and intelligent. He was thanked for affording the opportunity to the Division in seeing such an unusual case. Mr. P. A. McCredie F.R.C.S. Ed. read a paper on the treatment of varicose ulcers of the leg by modern method which gave rise to considerable discussion in which the majority of the members took part and for which Mr. McCredie was heartily thanked. Dr. Macdonald Ross introduced a lively discussion on the treatment of tuberculous glands. Various opinions were expressed and Dr. Ross replied. The Chairman exhibited various interesting specimens of more than passing interest including a twisted ovarian pedicle causing obstruction of the bowel emergency caused by feather inhaled which finally came away through operation made to drain the abscess and caecum grand which simulated appendicitis.

The members dined together and so concluded a very successful meeting.

## Naval and Military Appointments

### ROYAL NAVAL MEDICAL SERVICE

## CURRENT NOTES

## The Autumn Dinner

As stated in the SUPPLEMENT of September 17th the Autumn Dinner of the Association will be held in the King Edward VII Rooms, Hotel Victoria, Northumberland Avenue, London, W.C.2 on Wednesday, October 12th at 7.30 p.m. The retiring officers—Mr R. G. Hogarth, the immediate Past-President, and Sir Robert Bolam, who has been Chairman of Council for the past seven years—will be the chief guests of the evening. Mr Neville Chamberlain, the Minister of Health, has consented to reply to the toast of 'The Common Health' and the Earl of Birchenhead will be among those replying for the Guests. Among others who have already accepted the invitation of the Council are Sir Arthur Robinson, the First Secretary of the Ministry of Health, Sir F. J. Willis, Chairman of the Board of Control, the medical heads of the various services, the Presidents of many of the medical societies, the President of the Royal College of Physicians of Edinburgh, and several of the medical and university Members of Parliament. Members are urged to apply immediately for tickets which can be obtained from the Financial Secretary of the Association, price 10s. 6d. each exclusive of wines. Ladies are welcome.

## Testimonial to Dr J. P. Williams Freeman

The attention of our readers is directed to page 139 of this week's SUPPLEMENT, on which will be found a letter signed by the representatives on the Insurance Acts Committee of areas which are distinctively rural, together with Dr. Dam and Dr. Brackenbury, asking for subscriptions to a proposed testimonial to commemorate the work that has been done for rural insurance practitioners by Dr. J. P. Williams-Freeman.

## Proposed Formation of a Pathologists' Group in the Association

The following petition has been sent to the Council of the Association by Dr S. C. Dyke of the Wolverhampton and Staffordshire Hospital, signed by twenty-eight members of the British Medical Association who are members of the British Pathologists' Association, of which Dr Dyke is secretary.

"We the undersigned members of the British Medical Association engaged in the study and practice of pathology, beg hereby to make petition that a Pathologists' Group be established within the British Medical Association under the terms set forth in Appendix III to the Annual Report of the Association."

"The debate upon the Committee of the Association at the recent Meeting provided ample evidence of the function and status of pathologists in the medical practice of the Association."

medical practitioner. It is our opinion that the interests of this body are not at present sufficiently represented in the councils of the British Medical Association.

The interests of pathologists differ in some respects from those of the medical practitioner constituting the membership of the ordinary Divisions and Branches of the Association. In meetings of such formations of the Association pathologists may therefore find it difficult to make their opinions of weight with the Association.

We are of the opinion that some central format on within the Association is necessary to collect, formulate and give vent to the opinions of pathologists upon matters concerning relationships with other branches in the medical profession and between workers in the various branches of their own subject and also to exercise a general supervision over their interests in various ways.

We would suggest that all those members of the Association attached as salaried officers, either on a whole or a part time basis to the staff of a laboratory devoted to pathology or one of the allied sciences or directors of the pathological service of a voluntary hospital though unsalaried be eligible for membership.

Dr Dyke points out that there are probably a large number of other members of the British Medical Association who are interested in the matter and who would like to sign the petition. Those members of the Association who come within the definition contained in the last paragraph of the petition who are in agreement with it and would like to sign it are asked to send their names at once to the Medical Secretary of the Association.

## Work of the Central Committees.

## National Health Insurance

On September 15th the Insurance Acts Committee discussed a number of questions arising out of the matters covered by its report to the Panel Conference. These included points in connexion with the revision of the disciplinary machinery, the modification of the regulations as to change of doctor and the new form of medical card, and methods of co-operation with the Retail Pharmacists' Union. All these matters will be discussed in detail at the forthcoming conference. In connexion with the resolution of the Representative Body at Edinburgh calling upon the Insurance Acts Committee to urge upon the Ministry of Health the provision or extended benefits under the National Health Insurance Acts the Committee reiterated its intention to take every opportunity of impressing this view upon the Ministry in the future as it has done in the past.

## Public Health

On September 16th the Public Health Committee had under consideration the means of giving effect to the instruction of the Representative Body for the extension of the Association's work for public education in health. The Committee approved a draft circular for transmission to the Divisions and Branches together with the Memorandum on the Education of the Public in Health Matters adopted by the Representative Body at Edinburgh. The Committee is of opinion that a public address on the lines of the Hastings Lecture or January last should be made an annual fixture, and that the next of the series should be delivered in the spring of 1928.

A small subcommittee was appointed to draw up a list of possible subjects for the lecture, for consideration at the next meeting. The Committee had to determine the appropriate method of meeting a number of those difficulties which inevitably arise from time to time in connexion with public health appointments and the application of the Association's scale of salaries. On the other hand, the general applicability of that scale was illustrated by a report upon forty-two public appointments made at the scale salary between the beginning of May and the end of August of this year. Another matter of interest considered at the meeting was a request from the National Clean Milk Society for support in a movement to secure an alteration in the classification of milk prescribed by the Milk (Special Designations) Order, 1923. In the opinion of the Committee sufficient time has not yet elapsed since the Order came into force to justify the formulation of a considered verdict as to the merits of the existing classification, and the proposed action would consequently be premature.

At its meeting on September 20th the Organization Committee had before it a number of reports illustrating the increasing activity of the Association in various fields. Points of special interest were the increase in membership from 32,122 in February last to 33,300 on September 7th, and the formation during the year of two new Divisions in South Africa—namely, the Alhwal North, Queenstown and Umfuta Divisions of the Witwatersrand Branch. The Transvaal Division of the Association now has an official organ, the *Malaya Medical Journal*, which is published quarterly, with the principal of the Malaya College of Medicine as editor-in-chief and the acting principal as deputy editor. Circulation of that *Journal* is not confined to members of the profession, and accordingly it contains articles on such subjects as estate sanitation, which are of interest to the local planters and other subscribers. The Committee congratulated the Medical Secretary on the success of his visit to the Irish Branches last spring, and directed that his report on the subject should be placed before the Council.

In June last the Council had under consideration a report as to the necessity for an international medical code for intercommunication between officers of ships at sea in cases of illness or accident, and instructed the Medico-Political Committee to investigate and report upon the matter. In the interval promises of co-operation have been received from the Government departments interested in the question, and the Medico-Political Committee, at its meeting on September 21st, decided to recommend to the Council the appointment of an *ad hoc* committee to explore the whole subject. This recommendation will come before the Council at its next meeting. The Committee had before it certain reports as to delay and inconvenience occasioned to relatives by the working of the new regulations for the delivery of death certificates to the local registrars. The point raised seems to be one of substance and the Committee is requesting the Registrar-General to make a statement upon the subject for publication in the *British Medical Journal* at an early date. Complaints are received from members from time to time of the regulation adopted by certain local authorities ordering their medical officers to hand over the fees allowed to medical practitioners under the Coroners (Amendment) Act, 1926. The Committee expressed the opinion that, so far as whole-time officers are concerned, it is impossible to take exception to such a rule.

#### Direct Representation upon Insurance Acts Committee and Scottish Subcommittee

Nominations may now be made for the election of twenty-three direct representatives upon the Insurance Acts Committee for the session 1927-28. Forms have been circulated to Local Medical and Panel Committees, and must be returned so as to reach the Medical Secretary not later than Monday, October 10th. Nominations may also be made for the election of eight direct representatives on the Insurance Acts Subcommittee (Scotland)—four by Scottish

County Panel Committees and four by Scottish Burgh Panel Committees. The completed forms must be returned by Monday, October 10th.

#### The Annual Panel Conference

The annual Conference of Representatives of Local Medical and Panel Committees will be held in the Great Hall, British Medical Association House, Tavistock Square, London, on Thursday, October 20th next, under the chairmanship of Dr E K Lo Fleming (Wimborne, Dorset). Motions or amendments for the final agenda must be received by the Medical Secretary by Monday, October 10th. The final agenda will be issued on Thursday, October 13th.

#### Association Notices

**BRANCH AND DIVISION MEETINGS TO BE HELD**  
BIRMINGHAM BRANCH COVENTRY DIVISION—The annual dinner of the Coventry Division will be held at the King's Head Hotel on Tuesday, October 4th.

## CURRENT NOTES

## The Autumn Dinner

THE Autumn Dinner of the Association will be held in the King Edward VII Rooms, Hotel Victoria, Northumberland Avenue, London, W.C.2 on Wednesday next, October 12th, at 7.15 or 7.30 p.m. The retiring officers—Mr R. C. Howarth, the immediate Past-President, and Sir Robert Bolam, who has been Chairman of Council for the past seven years—will be the chief guests of the evening. Mr Neville Chamberlain, the Minister of Health, has consented to reply to the toast of "The Common Health" and the Earl of Birkenhead will be among those replying for 'The Guests'. Among others who have already accepted the invitation of the Council are Sir Arthur Robinson, the First Secretary of the Ministry of Health, Sir P. J. Willis, Chairman of the Board of Control, the medical heads of the various services, the Presidents of many of the medical societies, the President of the Royal College of Physicians of Edinburgh, and several of the medical and university Members of Parliament. Members are urged to apply immediately for tickets, which can be obtained from the Financial Secretary of the Association, price 10s. 6d. each exclusive of wines. Ladies are welcome.

## Hospitals Committee.

On September 27th the Hospitals Committee had before it an invitation to give evidence before a committee appointed by the King Edward's Hospital Fund for London on the initiative of its President, the Prince of Wales, "to inquire and report upon the question of hospital accommodation in London for persons prepared to pay more than ordinary voluntary hospital patients, and to report the conclusions at which they may arrive. The committee accepted the invitation, considered and approved a draft memorandum of evidence based upon the existing hospital policy of the Association, and appointed the following to give oral evidence on behalf of the Association: Mr H. S. Souttar, Mr W. McAdam Eccles, Dr H. B. Brackenbury, Mr N. Bishop Harman, and the Deputy Medical Secretary. The committee appointed a special subcommittee to consider the resolutions of the Representative Body on the formation of a middle-class hospital policy, and appointed representatives on a special committee which the Council is being asked to set up in order to examine in conjunction with representatives of the Public Health and Medico-Political Committees the whole question of the manner in which the State and both voluntary and statutory associations and authorities are encroaching at the present time upon the field of private medical practice. This committee will have before it the discussion of this matter at the Representative Meeting at Edinburgh. The committee has had under consideration principles for regulating the admission of paying patients referred to

the x-ray departments of hospital and expect to reach a final decision on the subject at its next meeting. Mr H. S. Souttar was nominated to serve on the Insurance Acts Committee as a member of the Hospitals Committee who is also on the voluntary staff of a hospital.

## Psycho-Analysis Committee.

The Psycho-Analysis Committee met on September 26th and reappointed Dr R. Langdon Down as its chairman, Dr R. Worster-Drought as deputy chairman, and Dr P. G. Gordon of Bath as honorary secretary. After lengthy discussion a questionnaire on psychological analysis was adopted for circulation to those particularly interested in this branch of medical work.

## Royal Army Medical Corps

The British Medical Association after prolonged efforts, has been successful in obtaining rates of remuneration for officers of the Royal Army Medical Corps which, in its opinion, compare favourably with those in other branches of medical practice. Such being the case it feels that the new regime must be given a fair trial and consequently it is advising those newly qualified men who ask for guidance that it is well worth their while to apply for commissions in the Corps.

The increasing number of inquiries now being made at the War Office regarding service in the R.A.M.C. appears to justify the belief that young medical men are beginning to think more of service in the Corps as a career which offers many opportunities of advancement not to be found in general practice. This change of attitude is no doubt due, in part at least, to the improvements that have been made during the past twelve months in pay and general conditions of service and to the prospect of more rapid promotion incidental to these changes. The pay and allowances (when received in full) of an unmarried lieutenant now amount to approximately £511 a year while a captain, if unmarried gets at present rates £617 and if married £709. These rates of course increase with promotion in rank and years of service till they reach the maximum of over £2,000 a year and in addition each year of service carries its element of gratuity or pension. An officer is eligible for promotion to the rank of captain on the completion of three and a half years commissioned service and to the rank of major on the completion of twelve years' commissioned service provided that in each case he has passed the necessary examination and is recommended for such promotion. Promotion to the higher ranks is by selection, and is naturally dependent on the occurrence of vacancies, but last year twenty-three majors were promoted to the rank of lieutenant-colonel, and for new entrants to the service the prospect of advancement to all the higher ranks is now unusually favourable. Two other features of the present conditions of service should be specially attractive to newly-qualified practitioners. Those who take up a hospital appointment can under certain conditions, at their commissions antedated—that is, service in a hospital appointment will count as service in the army—and if for any reason an officer wishes to retire after seven

[SUPPLEMENT TO THE  
BRITISH MEDICAL JOURNAL]

jeans' service he may do so with a gratuity of £1,000, a sum which should go a substantial way towards opening the door to a civil practice.

The next examination of candidates for commissions will be held in January, 1928, and in the meantime full information regarding the service and mode of entry may be obtained on application to the Under Secretary of State (A M D 1), The War Office, Whitehall, London, S W 1, either personally or by letter.

## L Association Professionnelle Internationale des Medecins

The second annual conference of the above association was held in Paris from September 29th to October 1st. There were present representatives of the national medical associations of Austria, Czechoslovakia, Denmark, France, Germany, Holland, Jugoslavia, Lithuania, Luxembourg, Poland, Rumania, Sweden, and Switzerland. The Medical Secretary of the British Medical Association was present as an observer. A great deal of attention was given to the question of national insurance against sickness, and two resolutions (of which the following is a translation) were adopted unanimously.

The annual conference of the A P I M declares itself unanimously of opinion (1) that in the interest of the insured persons, in all laws of social insurance there should be free choice of doctor by the patient and (2) that when any laws are under consideration which affect the medical profession the representative medical organizations should be consulted by the Governments concerned.

## Association Notices.

## BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH** WEST BROMWICH DIVISION—The fourth regular meeting of the West Bromwich Division will be held at the offices of the Smethwick Insurance Committee, 1, South Road, Smethwick, on Tuesday, October 11th, at 3.30 p.m. Dr W A Potts (Birmingham) will read a paper on psycho analysis.

Hospital, Hurlenden Road, N W 10, on Wednesday, October 19th, at 9 p.m. Mr A H Levy, F R C S, will speak on ocular manifestations of general disease.

**NORTH OF ENGLAND BRANCH** TRIVESIDE DIVISION—A dance will be held at the Waverley Ballroom, Whitley Bay, on Friday, October 28th. Tickets, 12s 6d each, may be obtained from Dr John Murray of 4, Alma Place, North Shields. The proceeds will be devoted to the charities supported by the British Medical Association.

**OXFORD AND READING BRANCH** OXFORD DIVISION—A meeting of the Oxford Division will be held under the auspices of Radcliffe Infirmary Post Graduate Course on Friday, October 14th, at 3 p.m., at the Radcliffe Infirmary, Oxford. The speaker will be Dr J Gravesen, medical superintendent of Vejlefjord Sanatorium, Denmark. Subject: Modern treatment of pulmonary tuberculosis (illustrated by lantern slides).

**SOUTHERY BRANCH** PORTSMOUTH DIVISION—Division meetings will be held on the second Thursday in each month at the Queen's Hotel, preceded by a supper at 9 p.m. Sir John Ross Bradford, K C M G, M D, President of the Royal College of Physicians, will open the winter session on October 13th with an address on medical defence, members may invite friends in the legal profession. Non members can attend once during the session and are cordially invited to this first meeting. Members of other Divisions are cordially invited to attend all meetings. The cost of the supper is 3s 6d including gratuities.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH** SWANSEA DIVISION—The annual dinner of the Swansea Division will take place at the Hotel Metropole on Thursday, October 13th, when Dr Alfred Cox will be the chief guest. Several prominent local men will also be present as guests, and members are urged to keep this date free.

**SURREY BRANCH** CROYDON DIVISION—A meeting of the Croydon Division will be held at the Croydon General Hospital on October 12th at 4 p.m., when Mr E M Cowell, D S O, F R C S, will give a lecture demonstration on the modern surgical outlook. The Division will also hold a meeting at the Croydon General Hospital on October 18th at 8 p.m., when Dr J Strickland Goodall will read a paper on arterio sclerosis.

**SUSSEX BRANCH** BRIGHTON DIVISION—The next clinical meeting of the Brighton Division will be held at the Sussex County Hospital, Brighton, on Wednesday, October 19th, at 3.45 p.m. Arrangements are being made for a joint meeting between those members of the Sussex Law Society who practise in Brighton, Hove, and neighbourhood and the Brighton Division of the British Medical Association, to be held at the invitation of the Sussex Law Society at the Law Library 147, North Street, Brighton (first floor), on Friday, October 7th, at 8 p.m., when Mr John Flowers will open a discussion on questions of procedure and evidence in criminal cases, and deal especially with the admissibility of evidence tending to show past offences committed by the accused. It is hoped that many members of both professions will attend.

**SUSSEX BRANCH** HASTINGS DIVISION—The first meeting of the new session of the Hastings Division will take place at the Queen's Hotel, Hastings, on Thursday, October 13th, at 8.15 p.m. Mr Somerville Hastings, F R C S (surgicon Middlesex Hospital), will give an address, "The future of medical practice in England." At this meeting the Division will welcome friends of members.

**WEST SOMERSET BRANCH**—The autumn meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital on Friday, October 28th, at 4 p.m. Dr Eric Fritchard, F R C P, consulting physician Queen's Hospital for Children, London, will give a British Medical Association Lecture on the principles of nutrition in their application to the feeding of infants and children. The annual dinner for medical men residing in West Somerset will be held at the County Hotel, Taunton, on the evening of the same day at 7.15. Price of tickets 7s 6d (exclusive of wines).

**WORCESTERSHIRE AND HEREFORD BRANCH** HEREFORD DIVISION—The series of post graduate lectures at the Herefordshire General Hospital, arranged under the auspices of the University of Birmingham, will commence to day (Friday, October 7th) at 3.30 p.m., when Dr Wynn will discuss chronic arthritis and its treatment. The second lecture of the series on the significance of blood pressure variations will be delivered by Dr Willinson on Friday, October 14th, at the same hour.

**YORKSHIRE BRANCH** HALIFAX DIVISION—A general meeting of the Halifax Division will be held in the Board Room of the Royal Halifax Infirmary on Wednesday, October 12th. A discussion on p.m. will be opened by Dr Pollard and Dr Davidson, in which members are invited to take part. The annual dinner will be held at the White Swan Hotel on Thursday, November 17th, at 7.30 p.m.

**YORKSHIRE BRANCH** SHEFFIELD DIVISION—A general meeting of the Sheffield Division will be held at the Church House, St James Street, Sheffield on Tuesday, October 25th, at 8.30 p.m. Agenda: Report of representatives—Dr Forbes, Dr Mackinnon, and Dr Brockman, and vote of thanks. A general meeting of the Division will be held on Friday, December 9th, at the University, Sheffield, at 8.30 p.m. when a British Medical Association Lecture will be delivered by Mr H Beckwith Whitehouse, M S, F R C S, on practical applications of recent views on the menstrual functions.

**YORKSHIRE BRANCH** WAKEFIELD, PONTEFRACT AND CASTLEFORD DIVISION—A clinical meeting of the Wakefield, Pontefract and Bolton Division will be held by kind permission of Dr J Sherrin at the West Riding Mental Hospital, Wakefield, on Sunday, October 23rd, at 3 p.m.

#### CURRENT NOTES

##### Illustrations in the Journal

During the Annual Representative Meeting in Edinburgh a motion was brought forward by the Edinburgh and Leith Division requesting the Council to consider the possibility of improving the general quality of the illustrations appearing in the British Medical Journal. After an explanation had been given by the Chairman of the Journal Committee, in the course of which he emphasized the expense involved in reproducing pictures on special art paper, the motion was withdrawn.

This is a matter to which a great deal of attention has been given, and the efforts to obtain good results will not be relaxed. Pen and ink drawings that can be reproduced in line blocks are easily dealt with. The root of the difficulty is that nowadays most of the pictures submitted are photographs, and that they are not taken with a view to reproduction on a rapid press, as are those produced by journalist-photographers for the daily press. The situation was discussed again at the last meeting of the Journal Committee when the opinion was expressed that some good might be done if an appeal were made to contributors to realize that some of the difficulties in the way of satisfactory reproduction of photographs in the Journal can only be overcome if they will give their assistance.

Many of the illustrations sent for reproduction are very far from being suitable. Snapshots taken with a hand camera are a very severe test of a photographer's skill. Few amateurs can in this way produce a print suitable for reproduction on the printed page or even on special art paper. For photographs of patients it is best to use a portrait lens. Usually it is preferable to employ a photographer accustomed to portrait work. Care should be taken that the subject is properly lighted and shown against a flat uniform background. The whole effect of photography is in the contrast between the black and white. In most cases a smoothly stretched sheet white or grey gives the best contrast an ordinary wall with fittings in or upon it or a curtain hanging in folds is no unsuitable. Satisfactory process reproductions of anatomical details or of post-mortem appearances can seldom be obtained from photographs. Drawings in black and white without a wash will usually give all the details requisite, and are preferable to photographs or wash drawings. It is often as difficult to get a good result from a wash drawing as from a photograph. Descriptive details should not be written on a photograph or a drawing. Refer to letters in the margin with lines to the point to which it is desired to direct attention should be pencilled in faintly, and the description given in the legend.

The following rules from two contemporaries indicate the view taken by other editors and printers.

*The Biochemical Journal* Illustrations and curves accompanying papers must be carefully drawn about twice the size of the finished block on smooth white Bristol boards in Indian ink. Any lettering on these drawings should be lightly inserted in pencil.

*The Journal of Physiology* drawings should be in Indian ink and plain white. Numbers and letters should be employed letters numbers etc. should be written in pencil.

##### Treasurer's Cup Golf Competition.

The Central Golf Committee appointed by the Secretaries Conference at Edinburgh for the purpose of the Treasurer's Cup Golf Competition is as follows: Dr E. K. Le Fleming (Wimborne, Dorset) and Dr J. G. McCutcheon (Glasgow) together with the Deputy Medical Secretary. The Committee has decided that the competition shall be held in two stages—namely a first (or Division) stage, and a second (or final) stage, and that each Division should find its own winner in its own way. Entries should be handed in to the Secretary of the local Division as soon as possible, and the Division stage should be completed by June 1st, 1928. The winners of the Division stage will play off under medal play conditions (handicap) on Friday July 27th, 1928 during the Annual Meeting of the Association at Cardiff. It is hoped that this competition will include every Division in the British Isles. The rules and regulations governing the competition for this year are as follows.

##### RULES AND REGULATIONS

The cup is to be played for in two stages. The competition is open to all members of the British Medical Association.

**1st Stage.** Entries to be handed in to the Secretary of the member's Division. Arrangements for the first stage to be in the hands of a special Golf Subcommittee (or failing this the Executive of the Division). The terms of the competition to be settled locally by the Golf Subcommittee (or Executive) it having been decided by the Secretaries Conference 1927 that each Division should find its own winner in its own way. The handicap under which a member enters should be his lowest club handicap (limit handicap 18) and must not be altered at any time during the first stage of the competition. The first stage of the competition must be completed by June 1st 1928. In the event of the winner of the first stage not being able to compete in the final stage the runner up (with the consent of the local Golf Subcommittee) may compete in his or her stead in order that the Division may be represented.

**2nd (or Final) Stage.** The winners of the first (or Division) stage will play off under medal play conditions (handicap) on Friday July 27th 1928 during the Annual Meeting of the Association at Cardiff. The handicap allowed for the final stage of the competition will be the lowest handicap of the competitor as a July 27th 1928. The winner to be the player who returns the lowest score under handicap. In the event of a tie the winner shall be the player who returns the lowest score under handicap for the last nine holes. Arrangements for this stage to be decided by the Central Committee appointed by the Secretaries Conference.

All disputes to be settled by the committee responsible for the completion of each stage.

## The B M A Charities Fund

Dr D D Evans, M C, Charities Secretary for the South Essex Division, has forwarded the sum of £51 3s 6d as a contribution to the B M A Charities Fund collected from members of the local profession, as stated below

	£	s	d		£	s	d
H D Linder (Burnham on Crouch)	1	1	0	O W L Emery (Westchiff)	2	2	0
F Rees (Southend)	1	1	0	O Macdonald	1	1	0
F E Inghill	1	1	0	Maigret King	1	1	0
H G Elicy	1	1	0	R W S Chisholms (South Benfleet)	10	6	
H L Simpson (Southend)	1	1	0	F A Bevin (Hadhleigh)	1	1	0
Eyre Lloyd	1	1	0	J E Jamison (Rayleigh)	1	1	0
R A S Sunderland	1	1	0	W L Adams	2	2	0
Cleveland Smith	5	5	0	J R Cuthbert (Telsah)	1	1	0
E Wragg	2	2	0	C C Philip	1	1	0
R Lloyd (Burnham on Crouch)	1	1	0	J Diction (Southend)	1	1	0
Newman Norman (Westchiff)	1	1	0	F L Fairweather (Hoelev)	1	1	0
L W Light (Southminster)	1	1	0	C Grant (Thundersley)	10	0	
W H Sarril (Leigh)	1	1	0	A W Holthurn (Westchiff)	1	1	0
S Bridger (Southend)	2	2	0	D D Evans (Westchiff)	1	1	0
Essex Branch Council (Private Fund by Dr Corfield)	5	0	0	A L Dobbin (Hoelev)	1	1	0
J F Waller (Southend)	3	3	0	A D E Bayliss (Westchiff)	1	1	0
Brice Poole (Westchiff)	1	1	0	F J G Hattersby (Rayleigh)	1	1	0
Hamon Morgan (Westchiff)	1	1	0	Charlotte Shields (Westchiff)	1	1	0
					£51	3	6

As the total membership of the Division is 108, and as the contributions mentioned below are additional in many cases to subscriptions already paid to the various medical charities, it will be seen that the South Essex Division, which is the Division of Dr J F Waller, the chairman of the Charities Committee of the Association, is setting an excellent example

## The Association and the Newly Qualified Practitioner

The reports before the Medical Students and Newly Qualified Practitioners Subcommittee at the first meeting of each session must always have a particular interest, inasmuch as the ability of the British Medical Association to attract and retain within its membership each successive generation of practitioners is the most obvious measure of its vitality. The figures for the year under review register good progress, though they show also a wide field for increased activity in recruiting. The great majority of the medical schools in the country are now covered by the Council's scheme for recruitment, which is worked by the Branches and Divisions concerned, and their efforts, supplemented by those of the central office, have secured enrolment in the Association of 48 per cent of those who qualified in the period October, 1925, to September, 1926. How far this percentage may be increased by later enrolment or diminished by inevitable casualties remains to be seen, though some light may be thrown on the probabilities by an inspection of the record of the practitioners registered in 1923. This shows that of a total of 1,613 members drawn up to date from the ranks of those who registered in that year, the total number of casualties stands at the low figure of 108. What can be done in the first instance by well directed propaganda is illustrated by the best returns for the year 1925-26. From Durham University, (Newcastle-on-Tyne Division) 95 per cent of those who qualified during this period have joined the Association; from Glasgow (Glasgow and West of Scotland Branch) 95 per cent, from Queen's University, Belfast (Belfast Division of the Ulster Branch) 80 per cent, and from the Welsh National School of Medicine (Cardiff Division) 70 per cent. The special difficulties of the London area have long been recognized by the subcommittee, which welcomed a report that the Metropolitan Counties Branch had amended its standing orders to provide for a special standing committee to deal with the whole problem.

The general popularity of the Association's *Handbook for Recently Qualified Medical Practitioners* has never been in doubt. A reprint of the second edition of this work was sanctioned in October, 1926, within a year of its issue, and the demand, as indicated by the sales now reported, has not slackened. The utility of the *Handbook* is by no means confined to the newly qualified, for whom it is more particularly intended. Dr Todd, honorary secretary of the Australian Federal Committee, is distributing it to the class of final-year students of Sydney University to whom he lectures on the ethics of medical practice, and he pays a warm tribute to its usefulness in this connexion.

The entries for the prizes offered by the Association for essays by final-year students have always been disappointing numerically, though not as regards quality. For the five years during which the competition has been open, the average annual entry has been less than 27. On the suggestion of the Treasurer the subcommittee is recommending the Organization Committee to recommend to the Council that the competition should be thrown open to practitioners for twelve months after the date of their initial qualification, in the hope that those who have successfully disposed of their final examinations may be in a position to devote more time and energy to the special work entailed by the essays.

## The Malayan Medical Journal

Gratifying progress is to be noted in successive numbers of the *Malayan Medical Journal*, of which the September issue has just been received. It will be recalled that in January last this quarterly periodical became the official organ of the Malaya Branch of the British Medical Association, and in a Current Note on January 15th (SUPPLEMENT, p. 17) we referred briefly to the history of medical journalism in Malaya since 1892. The September issue contains original articles on water purification, on a mosquito and sanitary survey of Labuan, on the neglect of common diseases of the eye, on encephalitis lethargica in Malaya, and on the distinction between albumin and quinone in Mayer's test. Editorial articles discuss the BCG method of prophylaxis against tuberculosis, cosmophilous leucocytes, water and public health, and the retirement of Dr W. Fletcher, a past-president of the Branch, after twenty-four years' service in Malaya.

Dr. E. B. GUNSON, president of the Auckland Division or the New Zealand Branch, delivered a public address on August 1st in Auckland, the first of a series of three given by members of the Division. Dr. Gunson discussed the outstanding advances made in medical research during the past twenty years, with particular reference to the growth of specialism. He indicated the value of immunization against small-pox, typhoid fever, and diphtheria, described the eradication of malaria, and commented on the reduction in the infantile mortality rate following the adoption of the Plunket system. The lecture was illustrated by two cinematograph films, one of which demonstrated the preparation and use of serum in the fight against diphtheria, while the other showed the consequences of neglect of the teeth.

## Association Notices.

## BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH** COVENTRY DIVISION—The following programme of meetings has been arranged by the Coventry Division:  
Nov. 1st Coventry and Warwickshire Hospital 8.30 p.m. Paper by Chairman (Dr W. Brazill) on Medicine in Lay Literature.  
Dec. 6th Coventry and Warwickshire Hospital 8.0 p.m. Paper by Mr M. of the Rectum 8.30 p.m. Paper by Dr Brai holecystography.  
Feb. 7th Coventry 8.30 p.m. Discussion on Dental Sepsis and Internal Medicine. Openers Mr Harold Round of Birmingham and Dr Annand.  
April 3rd Coventry and Warwickshire Hospital, 8.30 p.m. Clinical Meeting.  
May 1st Annual Meeting, 8.30 p.m., the Hospital.  
**DORSET AND WEST HANTS BRANCH** WEST DORSET DIVISION—A meeting of the West Dorset Division will be held at the Weymouth and District Hospital on Tuesday, October 18th, at 8 p.m. Agenda: Cases will be shown and discussed. Dr J. Criswell (Bournemouth) will read a paper entitled "Language and mind." Members are requested to enter as soon as possible for the Divisional golf competition, and to forward their names and entrance fees (2s 6d) to the honorary secretary. Entries must be made by the end of this month.

**EAST YORK AND NORTH LINCOLN BRANCH** EAST YORK DIVISION—The following programme has been arranged:

Oct. 26th Reception  
Nov. 15th Discussion Tocal Sepsis  
Jan. 27th Annual Dinner  
Mar. 16th Clinical Meeting  
May 18th Annual Meeting at Wilberforce House, Hull

Members wishing to read papers or to show clinical cases or pathological specimens, should communicate with the honorary secretary at least a week beforehand.

WE—SOMERSET BRANCH—The autumn meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital on Friday, October 23th at 4 p.m. Dr Eric Price, a consulting physician to the Queen's Hospital for Children in London, will give a British Medical Association Lecture on the principles of nutrition in their application to the feeding of infants and children. The annual dinner for medical men residing in West

Somerset will be held at the County Hotel, Taunton, on the evening of the same day at 7.15. Price of tickets 7s 6d (exclusive of wines).

WORCESTERSHIRE AND HEREFORDSHIRE BRANCH HEREFORD DIVISION—The third post graduate lecture of the series arranged under the auspices of the University of Birmingham will be given at the Herefordshire General Hospital on Friday, October 21st at 3.30 p.m. by Mr G. P. Mills on some common effects of injury. Tea provided.

YORKSHIRE BRANCH HALIFAX DIVISION—The annual dinner of the Halifax Division will be held at the White Swan Hotel on Thursday, November 17th, at 7.30 p.m.

YORKSHIRE BRANCH SHEFFIELD DIVISION—A general meeting of the Sheffield Division will be held at the Church House, St James Street, Sheffield, on Tuesday, October 25th, at 8.30 p.m. Agenda: Report of representatives—Dr Forbes, Dr MacInnon, and Dr Brockman, and vote of thanks. A general meeting of the Division will be held on Friday, December 9th, at the University, Sheffield, at 8.30 p.m., when a British Medical Association Lecture will be delivered by Mr H. Beck with Whitehouse, M.S., F.R.C.S., on practical applications of recent views on the menstrual functions.

YORKSHIRE BRANCH WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION—A clinical meeting of the Wakefield, Pontefract and Castleford Division will be held by kind permission of Dr J. Shaw-Bolton at the West Riding Mental Hospital, Wakefield, on Sunday, October 23rd, at 3 p.m.

## Meetings of Branches and Divisions.

### METROPOLITAN COUNTIES BRANCH ST PANCRAS DIVISION

LECTURE BY SIR BERKELEY MOYNIHAN ON  
"MEDICINE IN ART"

At a very largely attended meeting of the St Pancras Division, held at the British Medical Association House, Tavistock Square, on the evening of October 11th, Sir Berkeley Moynihan, Bt., President of the Royal College of Surgeons of England, gave a lecture, illustrated by lantern slides, on "Medicine in Art."

In the old Greek mythology, said the lecturer, many great truths were hidden deep. Apollo, the god of light, and leader of the choir of muses on the heights of Parnassus, was also the god of art, and he had a favourite son, Aesculapius, upon whom he conferred the divine gift of healing. This family association between art and medicine had continued through the ages, and the great artists of the world had not been least happy when they had engaged their energies in depicting some of the injuries and maladies of mankind. The gargoyles of Notre Dame and other cathedrals, which were so placed as to indicate that evil spirits had been driven out of the church, were not the mere extravagances of the artist's fancy, but were modelled from actual examples of deformities. The Lincoln "imp" was possessed, not only of horns, which were very usual in these representations, but also of hare lip and a cleft palate. The lecturer was able to place side by side with his reproductions of the gargoyles actual pictures of human beings which showed that the stone figures were not just the wild caprice of the artist's fancy. One famous gargoyle in Venice, which was the subject of a finely written but misleading description by Ruskin, caught the attention of Charcot, who found that it corresponded closely with cases of hystero epilepsy he had seen at the Salpêtrière Hospital, and probably this famous gargoyle was a portrait of one of the artist's fellow workers who was suffering from the condition indicated.

Belief in possession by evil spirits was as old as human history itself. Drawings from a temple at Luxor showed how the phenomenon was imagined in an earlier day than that of Tutankhamen. It was curious that Charcot had for years described as one of the signs of hystero epilepsy the bending back of the body in the arc of a circle, without being aware that that exact phrase—the arc of a circle—was used thousands of times in the mediaeval descriptions of the victims of possession. The rite of exorcism, by the way, was still practised rather widely in Europe, and it was still declared that devils were actually seen issuing from the mouth or the top of the head of the victim. To what indefinite ages this belief went back was shown in prehistoric skulls (of which the lecturer produced photographs) with elaborate incisions, no doubt made for the letting out of the demon. In the Middle Ages it was almost a studio exercise for the painter to depict the exorcist at his work. In Raphael's "Transfiguration" a boy was shown who was clearly the victim of hystero epilepsy, but Raphael, as was clear also from other examples, drew this condition from his imagination, never having come in contact with a case, and his drawing was wrong in several particulars. Instead of standing on tiptoe as he should be doing, the boy

was planted firmly on his feet, his body was straight instead of being arched backwards, his forearm was supine instead of being pronated, and his mouth was open instead of being rigid, with the tongue protruding. Either this was, as Sir Charles Bell suggested, a case of malingering, or it was a poor effort of Raphael's imagination. But in Rubens's copy or imitation of Raphael's picture the same boy appeared much more truthfully represented, and in a similar work of an otherwise undistinguished pupil of Rubens the boy was delineated more correctly still. It was evident that the greatest of the artists had the poorest idea of what the appearance in hystero epilepsy really was. In another example showing exorcism, Raphael's cartoon of Ananias, although the arc of the circle and the drawing back of the head were correct, the arms and the feet were wrong.

Emotions as depicted by artists made an interesting study. Sir Charles Bell, who was both artist and anatomist, as an anatomical study put into action those muscles which he thought ought to be engaged in the expression of certain emotions, and his drawings very faithfully conveyed the expression of fear, suspicion, and so forth. The rapt expression was well shown in the Reynolds portrait of John Hunter, when the surgeon was in that famous trance. It was unfortunate, by the way, that in making this picture Reynolds was experimenting with bitumen, with the result that the colours were fugitive, and little by little this famous picture, which was at the Royal College of Surgeons, was disappearing. Expert opinion had been taken as to the possibility of saving it, but inevitably, in thirty or forty years' time, the picture would be unrecognizable. Another favourite studio exercise of the mediaeval artist was the expression of ecstasy, and here the lecturer mentioned what to him was one of the greatest pictures in the world, "The contemplation of St. Jerome," to be seen at the Louvre.

A rare portrayal of normal anatomy was afforded by the Laocöon, the famous antique group of marble in the Vatican. It was certain that the author of this work was one of the most competent of anatomists, so far as surface anatomy was concerned it was incomparable. The lecturer had in his consulting room a reproduction of the famous picture in the Uffizi Gallery of the dying Alexander. He was accustomed to ask his medical friends to discern from that picture the disease from which Alexander died, the answer was seldom forthcoming. It was cerebro spinal meningitis. Another point of medical interest in mediaeval painting was that in the representations by Michelangelo of the dead Christ the veins were made to stand out, as they did not in death. He once remarked on this to Lord Lascelles, who was an art critic of distinction, and Lord Lascelles made the cogent criticism that this might be intended to indicate that Christ would return to life.

One of the diseases depicted by artists in all ages was achondroplasia. It was seen in Egyptian drawings of 3000 B.C., in the Bayeux tapestry, and in the work of Velasquez. Raphael well showed the hypertrophy of muscles, and Leonardo depicted an enlarged thyroid. Acromegaly was well illustrated in one of the stone figures at Rheims, evidently the builder copied it from life, perhaps from one of the workmen. From many mediaeval pictures a diagnosis of leprosy could be made, but it was curious that one never found, at least in any painting, he had been able to study, any evidence of the existence of syphilis during the Middle Ages. It was, he thought, reasonable to suppose that syphilis never was found on this continent or in northern Africa before the discovery of America. Professor Elliot Smith assured him that there was no relic or mummy which would corroborate even a probable diagnosis of syphilis, and it was the same with works of art, there was nothing in sculpture or in portrayals on canvas which might be the characteristic rashes or other appearances of syphilis. Leprosy, on the contrary, was very faithfully depicted by the artists. The lecturer's concluding examples were from pictures illustrating surgery. Many mediaeval works portrayed the operation of circumcision, which was almost a studio subject for the old painters. Frans Hals had happily depicted a gentleman having a schaeus cyst removed from the scalp, and there were examples in great art of still more ambitious operations.

Artists through the centuries had not flinched from depicting with much realism the maladies, diseases, and deformities of mankind. Sir Berkeley Moynihan thought it was a good thing that medical men, when they took their infrequent and well-earned holidays, should carry with them the knowledge gained by their training at home, so that they could see with different eyes from those of other men the pictures and sculpture which were to be found in the galleries of Europe. At any rate it had been to him a great pleasure to be able to see in these pictures something that had escaped the eye of the ordinary—pictures, that is, the non-medical—critic. He thought it a good thing, too, that medical men should have the opportunity of turning sometimes, when they were perhaps a little disillusioned, from the worship of Aesculapius to the shrine of his father Apollo.

**DORSET AND WEST HANTS BRANCH Bournemouth Division**  
A very successful meeting of the Bournemouth Division was held in the Town Hall, Bournemouth, on October 7th when Dr How Wint was in the chair.

Dr JOHN O. SUTTON as one of the representative stated that he and his co-opted assistants had visited at the Annual Representative Meeting at Edinburgh, as instructed by the Division in June last. He urged the necessity of keeping the Parliamentary Fund going and appealed to every member to support it. The Charities Fund was also a very important item, and he thought it the duty of every member to support this work by an annual contribution. Dr MOORE said that the motion of the Division regarding the constitution and powers of the General Medical Council received better hearing this year than it had the year before, but it was defeated. On the motion of the CHAIRMAN, seconded by Dr MANOYER, a very hearty vote of thanks was unanimously accorded to the two representatives at Edinburgh.

The CHAIRMAN, in calling upon Dr R. C. CANTI to deliver his British Medical Association Lecture on living tissue culture, and how his films aid that the Bournemouth Division felt much honoured at having Dr CANTI with them that evening, inasmuch as the film had been shown only once in England and at Edinburgh during the Annual Meeting of the Association. Bournemouth was the first Division visited by him.

Dr CANTI explained that he was going to show two films. The first would show normal cells of the chick embryo and then malignant cells from a rat sarcoma growing and dividing. The second film would show the effect of radium emanations on the activity of both normal and malignant cells. The picture to be shown was projected upon some 200 some 400 and other 600 times, once was taken under low magnification and others under very high powers of magnification. Dr CANTI also threw on the screen some slides showing the apparatus by which the films were taken—apparatus which was original and very ingenious.

After the demonstration Dr CANTI replied to questions by members.

Dr H. L. GREVE, proposing a vote of thanks to the lecturer, said that he was at this wonderful film first at the Royal Society during the Lister centenary celebration, and he admired it more now than then he did then. He looked forward to an opportunity of seeing it a third time.

Dr E. K. LE FLEMING who seconded the vote of thanks, said that he could not understand how it was that more notice had not been taken of the film in view of its deep interest and vast possibilities. The vote of thanks was carried with acclamation.

On the motion of Dr JOHN O. SUTTON, seconded by the HONORARY SECRETARY, a vote of thanks was unanimously accorded to the Bournemouth Council for placing the room at their disposal.

**NORTH OF ENGLAND BRANCH NORTH NORTHUMBERLAND Division**  
The annual meeting of the North Northumberland Division was held in the Inn, Alnwick, on October 4th when Dr FULTON was in the chair.

The following office-bearers were elected for the ensuing year: Chairman, Dr LAWRIE; Vice-Chairman, Dr SCOTT; Secretary, Dr R. E. MYLES.

It was decided to hold the annual dinner on Thursday, November 17th, at Alnwick, when the principal guests invited were to be Professor STUART MACDONALD and Dr F. BEATON of Birmingham. The secretary was instructed to make arrangements to hold a meeting at Berwick and to ask Dr MACKAY to suggest a suitable speaker from Edinburgh. Professor RANKEN LYLE and Drs HAMILTON BARCLAY and NATHAN were also to be invited to deliver addresses during the winter.

**WILTSHIRE BRANCH TROWBRIDGE Division**  
A clinical meeting of the Trowbridge Division was held at Witley Sanatorium on September 26th when Dr C. O. LEY was in the chair. Dr J. D. MACFIE gave a short account of the method of inducing artificial pneumothorax and afterwards performed the operation on a patient. He also showed a number of cases of tuberculosis of interest and demonstrated the appearance of the lungs on the x-ray screen. Tea was provided by the courtesy of the managing committee and matron of the sanatorium.

## Correspondence

**Representation on the Insurance Acts Committee**  
SIR—Will you allow me a few sentences in connexion with, but not in reply to, Dr PICTON's letter? Otherwise that letter may leave quite a false impression on my feelings towards a part of the country with which I have some strong associations. It is true that some years ago I did use the words "nobody wants Cheshire" but they were preceded by the word "apparently" and were meant merely to state a fact, and not to indicate, or imply, my opinion. The fact was that, as regards the topographical groups for electing direct representatives on the Insurance Acts Committee, Wales, Lancashire, and Staffordshire had each in turn protested against being included in any group with Cheshire. Thus created, and still creates, a difficulty for the Committee and the Conference. Nobody appreciates more than I do the initiative and energy shown for many years by the Cheshire Panel Committee and its admirable honorary secretary—I am, etc.,  
L. WILKINSON, W. L., Oct. 5th.

H. B. BRACKENBURY

## Present Position of the Mileage Question

SIR—In the SUPPLEMENT of October 11th 1924 you were good enough to print a table showing the official data upon which the mileage fund had been calculated up to the year 1924, in which year a lump sum of £250,000 was accepted to quote the official letter of Sir Arthur Robison "for the Mileage Fund and to meet other points raised with regard to the rural practitioner by the deputation which recently saw representatives of the Ministry or Health on the subject."

This sum of £250,000 has remained unchanged and unchanged until this year when the Mileage Committee were asked once more to consider the relevant information which could be made available and assist the Minister with a recommendation as to the amount of the fund.

The most important information before the committee consisted of the official records of travelling collected by the Ministry in 1923 and 1924 from 249 rural practices (about 5 per cent of the whole) carefully selected so as to be representative and typical of the whole.

It might be useful if the Insurance Acts Committee were to complete the table with the assistance of the Ministry, by bringing the figures up to date, but in the meantime it may be stated that these official records show a substantial increase in all the factors which go to make up the calculation of the miles actually travelled as compared with the previous records of 1920-21.

(a) The number of visits paid per insured person amounted to 1.67 per annum as compared with 1.57—an increase of 6.36 per cent.

(b) The proportion of visits paid to insured persons as compared with private patients was increased and now constitutes 37 per cent of all visits paid, as compared with 33 per cent in 1920-21.

(c) The number of doctors claiming mileage has increased by over 4 per cent.

(d) The number of insured persons on the lists of all doctors claiming mileage has increased by over 10 per cent.

(e) The number of distance units has increased by 12.2 per cent.

In view of these increases it is not surprising that the total number of miles actually travelled in England and Wales works out at 7,471,744—an increase of 25 per cent over that for 1920-21.

Nevertheless the committee recommended that the total Mileage Fund should remain at £250,000. I hope the coming conference will not view this result with satisfaction. Many of us are at present engaged in laboriously keeping mileage records for 1927-28, but we may well ask "Cut hono?" if the £250,000 is to become a stereotyped figure—I am, etc.,

Andover Oct. 10th

J. P. WILLIAMS FREEMAN

## New Procedure as to Change of Doctor

SIR—In the new Regulations issued by the Minister of Health it is stated that if an insured person wishes to transfer from the panel or one doctor to that of another in his area he must either obtain the consent of both doctors or write to the Panel Committee requesting their permission to make the change.

Thus although nominally an insured person has in freedom of choice or medical attendant should he wish to assert this freedom he must apply to a third party for permission to do so. Is not this but the thin end of the wedge to curtail the insured person's freedom of choice?

Again the new Regulations will tend to increase the clerical work of the Insurance Committees' staffs as each application for transfer will necessitate two communications to the committee instead of one as at present. More work will provide an excuse for extra clerks or increases of salaries and thus add to the expenses of running the panel system. Would it not be better to try to lessen the work of committees, reduce their expenditure and apply any money so saved to increase the capital on loan?

Furthermore, anyone who has had experience of panel practice in industrial areas will know how difficult it is to make insured persons bring their cards to be signed before they require treatment, also to make them go to a post office to ask for a form if they have mislaid their cards. How can we expect these people to take their cards to two doctors in order to obtain the required signatures, or to write to a committee for permission to have their card signed? Many will prefer to pay for treatment as private patients rather than wrestle with tangles of red tape and this will not add to the popularity of the panel system—I am, etc.,

September 21st

## THE TAVISTOCK HOUSE FOUNDATIONS

## A DICKENS TAPIR UNVEILED

DURING the meeting of the Council of the British Medical Association on Wednesday, October 12th, a simple ceremony took place in the garden at the rear of the Council Chamber to mark the setting up of the inscribed stone which records the residence of Charles Dickens at Tavistock House on this spot, and marks the site of the foundations of that house.

Besides the President of the Association (Sir Robert Philip) and the Chairman (Dr H B Brackenbury) and members of Council, there were present Mr Frank S Johnson, chairman of council of the Dickens Fellowship, Mr A W Edwards, honorary secretary of that body, Mr Walter Dexter, editor of *The Dickensian*, and several members of the Fellowship council.

Dr BRACKENBURY, in opening the proceedings, said that the British Medical Association was fortunate in having several famous names associated with the ground it now occupied, and he hoped others of them would be commemorated in due time. None of them, however, was more famous than that of Charles Dickens, and he was very glad, as the Association was the custodian of what remained of Charles Dickens's residence at Tavistock House, to welcome representatives of the Dickens Fellowship at the ceremony.

Dr C E DOUGLAS, in the course of a brief Dickensian eulogy, said that the Association took no responsibility for the fact that there remained only a ruin associated with Dickens in Tavistock Square. When the Association acquired this building the ruin was already accomplished. These stones, if they could speak, would tell of a sad deed of vandalism. Tavistock House, which was the last dwelling place of Charles Dickens in London, was a place which should have been held in reverence by all English speaking people. Here there issued from Dickens's fertile pen such types as Jo the sweeper, Mr Panks, Little Dorrit, and Harold Skimpole. To this house Thackeray came to visit the novelist, here Carlyle enjoyed his companionship, and here, too, were performed those plays into which Dickens entered with so great a zest. It was nothing short of a crime that this residence of Dickens should have been suffered to fall into decay. For Dickens, although a humorist, was much more. He was a warrior from his youth up, a brave soldier in the liberation war of humanity. The slums with which he was familiar in his early years, the gross brutalities which marred his time, the barbarities of prison life, and the fearful ill usage of children burnt into his soul, and it was due to him in no small measure that these things had largely passed away. Dickens was not a doctor, and he rather laughed at the profession. Indeed, the speaker doubted whether, since Molière, there had been anyone who had treated the profession as Dickens treated it. But that had all been forgiven. The characterization of Sir Parker Peps, the absurd Dr Slammer, and the obsequious Mr Phillip could never offend the members of the medical profession of to-day, because they recognized in Dickens one of themselves, in the sense that he was in his way as great a pioneer of preventive medicine as Southwood Smith, and Farr, and Chadwick were in theirs.

Sir ROBERT PHILIP, as President of the Association, then unveiled the inscription on the stone, which reads

THIS IS THE SITE AND THESE BRICKS WERE  
PART OF THE FOUNDATION OF THE HOUSE OF  
CHARLES DICKENS  
1851-1860

BRITISH MEDICAL ASSOCIATION, 1927

Mr JOHNSON, Chairman of Council of the Dickens Fellowship, expressed his pleasure at taking part in the function. The British Medical Association had followed a number of other bodies in doing what it could to preserve and indicate the relics of Dickens. Hundreds of thousands of Dickens lovers would be interested in that little ceremony. London was a great place for all who cared for Dickens. It was peopled with his characters. Many places within a mile of that house were familiar to the novelist's own haunts. Tavistock House was the last of his London residences. He came there in the autumn of 1851, and remained there for nine years before moving to Gadshill near Rochester, where, after ten years more, he died. Tavistock House was perhaps the most interesting of Dickens's residences because he was in the fullness of his powers when he lived there. From Tavistock House he gave

to the world *Bleak House*, *Hard Times*, *Little Dorrit*, *A Tale of Two Cities*, and *The Commercial Traveller*, as well as *Fanny Hill*, *Child's History of England* and some famous Christmas stories. In conclusion, Mr Johnson asked permission for the Fellowship to bring on certain occasions parties of visitors who would desire to see what remained of the home of the great Victorian.

Dr BRACKENBURY said that members of the Dickens Fellowship, in moderate numbers, would find ready access to this spot. The brief ceremony then concluded.

## THE WILLIAMS-FREEMAN PRESENTATION FUND

The following is the first list of subscriptions received in response to the letter published in our columns of October 1st (p 139).

## A Local Medical and Panel Committee Contributions

	£ s d

£222 16 0

Cheques should be made payable to the Williams-Freeman Presentation Fund, and addressed to Dr D G Greenfield, Treasurer, c/o the Medical Secretary, British Medical Association, B M A House, Tavistock Square, London, WC1.

## National Insurance.

## LONDON PANEL COMMITTEE

A MEETING of the London Panel Committee was held on September 29th, with Dr H J CARDALE in the chair. The chairman and Dr Gregg were reappointed direct representatives for the County of London on the Insurance Acts Committee.

## Resolutions for Forthcoming Panel Conference

With regard to the annual report of the Insurance Acts Committee some question was raised on paragraph 40, dealing with joint research by practitioners. The Panel Committee expressed its entire agreement with the principle of joint research by insurance practitioners, but could not subscribe to the view expressed in the report that any scheme of research should be unpaid. The representatives of the committee at the forthcoming Panel Conference were instructed to urge that, in view of the roads which this work would make upon the time of practitioners, those undertaking it should be remunerated.

Discussion also took place on a resolution proposed to be moved at the Conference with regard to practitioners' appeals. A procedure is outlined in the report of the Insurance Acts Committee which makes it administratively practicable to allow an appeal for extension to be heard at the end of the hearing of an appeal. The committee decided to oppose this procedure as it would preclude a practitioner from any further opportunity, where an appeal is decided against him, of making oral representations to the Minister in mitigation of penalty. It was also agreed after discussion, to urge at the Conference that any additional raised at the hearing of a complaint against a practitioner before the Medical Service Subcommittee should not be admitted, but should be the subject of a fresh charge.

## Foods or Medicinal

A letter was read from the Insurance Committee's observations on whether certain foods could be regarded as medicinal products or foods. The committee agreed to send a reply that in its opinion saccharin glyco-lactoplo, and similar products were in the nature of foods, and were therefore not allowable at the cost of the Drug Fund, but that hygienic should be classed in the same way as extract of milk which is allowed at the cost of the Drug Fund, owing to its medicinal properties.

## Night Call

The committee agreed to a clause suggested by the Ministry of Health for insertion in the allocation scheme. This clause

## APPOINTMENTS

### THE AUTUMN DINNER

THE sixth annual Autumn Dinner was held in the Lower VII Rooms of the Hotel Victoria on Wednesday, October 12th, with Dr. H. B. BRUCE-CLACK, Chairman of Council, presiding. The first purpose of the gathering was to honour the retiring officers, Mr. R. G. Hogarth, C.B.E., LL.D., F.R.C.P., President of the Association 1926-27, and Sir Robert Bolam, M.D., LL.D., F.R.C.P., Chairman of Council 1921-27, who were seated respectively to the right and left of the Chairman, with Mrs. Hogarth and Lady Bolam. Two Cabinet Ministers were present, namely, the Right Hon. Neville Chamberlain, M.P., Minister of Health, and the Right Hon. the Earl of Birkenhead, Secretary of State for India. The other official guests, some sixty in number, included

Sir Thomas Barlow, Sir James Berry (President Royal Society of Medicine), Sir Geoffrey Butler, Dr. H. H. Dale, Dr. A. V. Davy, Mr. P. Professor W. E. Dixon, Major W. E. Elliot, M.P. (Parliamentary Under-Secretary for Scotland), Lieut. General Sir Andrew Fell, D.G.A.M.S., Surgeon Vice-Admiral A. G. G. G. (President War Section Royal Society of Medicine), Professor W. H. Gilmore, Dr. J. Strickland Goodall, Sir Laurence Halpern, Mr. A. Bishop Harman (Treasurer of the Association), Dr. C. O. Hartshorn (Chairman Representative Body), Sir Thomas Horder, Mr. Norman King (Registrar General Medical Council), Dr. P. W. Leslie, Dr. E. Graham Little, Mr. P. Sir Richard Luce, M.P., Dr. J. A. McDonald, Sir Ewen Maclean (President Elect), Sir Philip J. Jones, Dr. Hamilton C. Marr (President Medico-Psychological Association), Sir Vice-Marshal D. Munro, Dr. Christine Murrell, Sir Robert Plump (President of the Association), Sir Alfred Rice, Sir Arthur Robin (First Secretary Ministry of Health), Sir Humphry Rolleston, Major General J. B. Smith, Mr. W. G. Spencer (Honorary Librarian), Dr. J. T. Stanton, Dr. T. H. C. Sutherland, Sir Jenner Verrall, Mr. S. P. Vivian (Registrar General), Dr. T. Watts, M.P., Sir A. L. Webb (Director General Medical Services Ministry of Pensions), Dr. J. Wheatley, Sir Dawson Williams, Sir F. J. Willis (Chairman Board of Control), Mr. J. J. Withers, M.P., and Sir E. Hilton Young, M.P.

### "The Retiring Officers"

THE CHAIRMAN, after the toast of His Majesty the King, had been honoured proposed the health of the two retiring officers. He said:

The British Medical Association has a great respect for order and precedent, from which it departs only with reluctance. One of the things which are in order is to have an Autumn Dinner. For late years it had been the custom to hold that dinner in the Association's own hall in Tavistock Square, and it was regretted that circumstances had, for this year at any rate, made it impossible for the Association to welcome its guests in its own home. Another thing he said, which is prescribed for us is the order of toasts at this dinner, and first among these is the health of the retiring officers. It is not part of our

custom that the Chairman should propose that toast, but when just a few of us who had to make some arrangements at this dinner were considering the matter it was suggested by one of my colleagues that the issue of the toast would be enhanced if it were proposed from the chair, however unworthy the occupant of the chair might be for such a task. That suggestion was received with suspicion on his part and alacrity, and it was not until afterwards that I realized that I also was a retiring officer—although by the kindness of the Council I have been allowed to pass from one office to another—and that the placing of this toast in my hands was a most effective means of preventing any long being said about the retiring Chairman or the Representative Body. (Laughter.)

It is a great privilege to propose this toast with regard to the two officers who retire this year. It has really been an extraordinary pleasure to have had Mr. Hogarth with us during the last two years, first as President-Elect and then as President, and he is still happily taking part in our concerns at least for another year as Past-President. He has served us well in Council and at the Representative Meeting, and at all the official gatherings of our Association. He has been of great help to us in the advice he has given, and he has managed to maintain an attitude of constant cheerfulness which has also been a great help. A special feature of his personality has been those happy speeches which he has delivered not only to us here but in various places throughout the country. I wish he would tell me how he manages to think of those delightful phrases which abound in the speeches he delivers. I am sure he must have to search the dictionary sometimes for the appropriate word, and I dare say some of you like myself when you hear these phrases do strive to remember them and steal them and repeat them as if they were your own, but when the moment comes my memory at all events, always fails me. Mr. Hogarth, I am sure will forgive me if I say that the difficulty of expressing our feelings of gratitude to Sir Robert Bolam is even greater than the difficulty with regard to Mr. Hogarth. Sir Robert Bolam has given us the most assiduous and self-sacrificing service in innumerable ways for a very long time. None of us can ever thank him sufficiently. As it is impossible to express in words what we should like to say, I am not going to attempt to do so. We have had other opportunities when others who are here to-night have tried to express what we all feel about Sir Robert Bolam's personality and work, but none of us however able could really do justice to what ought to be said. (Applause.)

There are just two things I would like to say about Sir Robert Bolam. Lately he has come to be associated very prominently with one outward and visible sign of the inward and spiritual grace which of course the Association possesses in such abundance, and there is just a little danger of a legend growing up in the Association of Sir Robert

Bolam as the great master builder. That would be quite a true legend if we had regard to more than the material building, but lest those who come after us should concentrate too much upon that aspect of Sir Robert Bolam's work—lest it should grow into a sort of legend which, however true, would be very incomplete—we should like to testify that behind all that he has done so extremely well there lies the motive of increasing the power and influence of the British Medical Association and, through that increase of power and influence, helping forward the well-being and the public health of the people of this country. (Applause.) We have not only admired the extraordinary work he has done, but the very remarkable way in which he has persuaded us to help him in that work. I think it was Boswell who told us that Burke's way of dealing with an argument was to wind into his subject like a serpent, whereas Johnson himself used the sledge-hammer. I have known Sir Robert Bolam use both those methods of approach, but what I think Goldsmith said of Johnson was that when his pistol missed fire he knocked you down with the butt end of it. I do not know whether Sir Robert Bolam would do that, because as yet his pistol has never missed fire, but the fact that he has done the work of a business man in connexion with our Association, and has done all the other work so well, and has persuaded us in the way he has to carry on the work and inspired us to further efforts is a very remarkable achievement. But there is something more than that in the respect which we feel for Sir Robert Bolam's personality. It goes beyond thankfulness for his work and admiration of the way in which he has done it to a personal affection for the man himself. (Applause.)

When I ask you to drink this toast I hope you will remember also Mrs Hogarth and Lady Bolam. They too have made very great sacrifices and have helped us very much, not only by allowing their husbands to do what they have done, but also by their presence at our annual meetings and at other gatherings from time to time.

The toast was drunk with much enthusiasm.

Mr R G HOGARTH began by remarking that he always thought it a salutary rule that Presidents of the British Medical Association, when once they had passed the elixir, should be content to "cruise upon the midnight with no pain." But, he continued, since your goodwill and Dr Brackenbury's far too generous speech compel my brief return to the upper air, I shall not affect to disguise my grateful appreciation of the references made to a year of office now judged beyond appeal. The constitution of the Association happily does not expose its presidents to the horrid dilemma which recently confronted their brother President of the United States, for it effectually represses ambitions prompting towards a third term of office by sternly denying the bare possibility of a second. That is sound preventive medicine. (Laughter.) For myself, I never can be sufficiently grateful to those who do the work of the Association at headquarters, to Dr Cox and his colleagues, to the Chairmen of the Council and the Representative Body, and to every member of the Association with whom I have had relations. I was singularly fortunate in being able to turn at any moment for counsel to Sir Robert Bolam, whose name, I predict, will be held in ever-increasing honour, though he has now retired from the office which he filled with so much distinction to himself and so much profit to the Association. He is the real founder and only begetter of the stately mansion which worthily proclaims the Association's confidence in itself and its mission, and presents to a public necessarily much impressed by externals an imposing frontispiece. I will not say that Sir Robert has "builted better than he knew," but I can say that many of us are only now beginning to grasp the prescient wisdom of the great designs which his buoyant and magnetic optimism biased the timid and emboldened the doubting to accept. Nor am I less a debtor to Dr Brackenbury, large of tolerance, easy of approach, greatly patient of the infirmities of his friends, a staunch bicker, and hearty in encouragement and praise. Fortunately indeed was my lot to be in office when the Association had two such men in its chairs—incomparable strategists in coping with these outside the household, and possessed of a rare genius in the direction

of its innermost councils. Long may our twin Dioscure illumine the path of the British Medical Association! I would gladly mention others, but I fear that I have already trespassed too long on your forbearance, and the path of it all is that it is the efficiency of our splendid organization which makes the presidential yoke so easy. I thank Dr Brackenbury on my own and my wife's behalf for the kind things he has said. (Applause.)

Sir ROBERT BOLAM, who was received with prolonged applause, said I have but a few words to say because, although I am returning from office, you have asked me to work still longer for the Association we all love, and I do not feel that I am severing myself in any great measure from the work you have asked me to do, and which you have prized quite beyond its worth. I cannot offer you the flowing phrases and rounded periods of the Past-President, and would only say that, seven years ago, when you were kind enough to elect me to the leadership of your executive team, I took the position with hesitation and doubt, and if it had not been for the constant help of all the members of the Council and the officers, none of this work to which you have put my name could have come to fruition. The last seven years have not been an easy time in medical politics. There have been many things which are of interest to large numbers of our members and guests here and which one might allude to on an occasion less festive than this, but I am not going to stand between you and the Ministers of His Majesty's Government who have been kind enough to come on this occasion, and whose presence is an evidence that the place of the Association is higher now than it was ten years ago. This Association will only stand in the public eye at a high level if the public and those concerned with government are assured that we are out for the public health and not for the private pocket. I believe, and it has been the sustaining belief in all the work that I have done, that we are doing good work for the national health, and so long as that is the case I am sure that our Association is bound to prosper. It is a little difficult for me, after the kind words that have been said, and the indication of your kindness that has been all around me during the last few months, to say what I feel. But I thank you very sincerely for the way in which you have received this toast. I want especially to thank Dr Brackenbury for his reference to the help that I have received from my wife in carrying out this work, and I want to end by saying that I trust my successor in office, my very good and loyal friend the chairman here to-night, may have as happy a period of office as I have had. (Loud applause.)

#### "The Common Health"

Mr H S SOUTER, CBE, FRCS, proposed the toast of "The Common Health." He said: "This is a subject which excites the interest of everybody. There has never been a time when interest in the health of the nation was so universal, and I think the reason is that we have suddenly discovered that health is obtainable, that there is enough health to go round. As a nation we are the despair of foreigners because they do not understand our lack of co-ordination and the scope we allow to individuality. But I think, nevertheless, it would be an advantage if we could introduce a certain element of co-ordination into our health service. Take, for example, our great hospitals, which have been converted from refuges for the sick poor into machine shops for the cure of those who are ill. The hospital is now a wonderful organization in which sick people are restored to health. We no longer allow them to disappear from our ken even after they have come out. We follow them up with all the energy of a motor firm after its clients. We have our follow-up departments, our annexes, our convalescent homes. Yet the hospital is extraordinarily isolated. On the one hand, largely separated from it, we have the great body of general practitioners who look after the health of the people in their own homes, and on the other hand the great municipal and State hospitals, which have as little connexion with the big teaching hospitals as if those institutions never existed. Surely a great deal could be done by co-ordinating all these services. That is just where the Ministry of Health comes in. The Ministry can co-ordinate the services of the different branches of the medical profession until it really does come true that we

have defeated disease. Even at the present day it is beginning to be realized that most disease is unnecessary. It is quite unnecessary for people to die from tuberculosis. Most of the fevers we have defeated so completely that numbers of the fever hospitals in London have actually closed their doors. A great deal of disease can be defeated entirely, and where we cannot defeat disease we can ameliorate its effects. Gilbert, beneath whose humour there was often a strain of pathos, said:

What if the evening comes too soon  
We've months and months or afterwards

and it is in the power of our profession to prolong the "art moon" even if it cannot restore to perfect health. Working as I do in a great hospital I look upon it as a centre of great medical service. Why should we not be coupled up with the private practitioners whose patients come within our gates? The hospital service should be so organized that the doctor who sends in his patient is kept informed of all that happens to him. Again the great State and municipal hospitals could surely get help from the large voluntary hospitals with their laboratories. Perhaps you will say that such co-ordination threatens the voluntary principle and suggests a State medical service. But I think that a distinction can be drawn between what has been termed a State medical service and medicine in the service of the State. The one is somewhat un-English; the other is thoroughly in harmony with our national temperament, for I do not believe that there is any country in the world where every man and woman is so thoroughly devoted to the service of the State. (Much and without any great number of words every mother's son having served in the great war is ready now to give his country in the ways of peace.) And surely to us here the service of the State as a whole is a greater thing than the service simply of our own profession. It is a special pleasure to couple with this toast the name of Mr. Chamberlain, for that name to the generation which has passed or is passing as well as to the present generation, is a sign of high service to the State. (Applause.)

The Right Hon. DEWILL CHURCHMAN, in responding to the toast "You, Sir, have told us that you like in this Association to maintain your old forms and procedure and I think perhaps something of your old form is to be found in the unfamiliar phrase 'The Common Health.' I suppose that what it means is the summation of the health of all the individuals who compose the community and when we drink this toast we intend to signify our desire to maintain and if possible improve the average health of the nation. That is the task to which both you and the department over which I have the honour to preside are devoting attention. Your part is to repair the injuries to the individual and mine to surround the individual with such safeguards as will render it necessary for you to do as little as possible. If I were to be a wholly successful your occupation would be gone. Fortunately we shall never deprive the individual of one of the greatest pleasures of his existence, that of the examination and discussion of his symptoms." (Laughter.) But I think that working together we may truly claim that we are making a good job of the common health. If we take the decade 1870-80 for comparison we find the average mortality rate during that period to have been 21.4 per 1,000. Last year the rate was 11.6. The infant mortality rate in the earlier period was 1.49 per 1,000. Last year it was 70. In fifty years therefore we have nearly halved the general rate and more than halved the infant mortality rate. There are very remarkable figures and it would be interesting to follow up their reactions. If it had not been for that extraordinary progress I suppose that to-day we should find our elves in the presence of a diminishing and not an increasing population. Perhaps this would free us from the nightmare of unemployment and it is certain that one of the great political parties would not as it is now, be sent from top to bottom by internal divisions on the question of birth control. (Laughter.)

One might pursue various academic speculations but I think it is more interesting to consider what it is that has brought about this wonderful improvement. It would be a mistake to attribute it to any one factor. The advance

of medical and surgical science must have had a great deal to do with it. I venture to think that the activities of the Ministry of Health have also had a share, especially in view of the attack upon tuberculosis and the establishment of a network of maternity and child welfare institutions. Something again must be attributed to the general rise in the standard of living. But I should not be surprised if, after all, one of the most potent factors was the gradual education of the man and woman of this country in the simple rules of how to keep themselves healthy. That education has been fostered by the efforts of general practitioners or medical officers of health of the school medical service and also of the press. Although perhaps by the teaching conveyed in this last medium the public may occasionally be bewildered. But there is still much to do in the education of the public and now that powers are given to local authorities to carry on propaganda in connexion with all kinds of health services I hope that with due regard to economy they will make use of those powers and will not leave the field entirely to miscellaneous fanatics such as those who are responsible for the rapid spread of small pox—(Hear, hear!)—or which we had no fewer than 11,000 cases in this country last year.

But ladies and gentlemen perhaps I might venture to say to you in the privacy of his room that I am not sure that the education ought to be confined to the man in the street. Is it not the case that there are some members of your own profession whose theory and practice have got a little rusty since they walked the hospitals and who might be the better for a certain amount of retraining? If there be such I am not blaming them for I realize very fully what it must mean to be a country doctor in some remote town or village trying to extract a not too exuberant income from a practice which entails unremitting and exhausting labour and I say to myself, What wonder if a man working year in and year out under such conditions finds himself rolling a little behind as most modern practice. What wonder if sometimes he fails to recognize the first symptoms of a disease like tuberculosis until the manifestations become unmistakable. Last year we spent on the treatment of tuberculosis in this country two and a half million pounds and although it is true that the mortality rate of tuberculosis is gradually decreasing the decrease is desperately slow and as a matter of fact notifications of new cases are actually increasing. I do not draw from that the conclusion that the disease is on the increase but rather that we are only gradually coming to realize the extent of its incidence. I believe that there are many practitioners throughout the country who would welcome the opportunity of improving their knowledge on this and many other subjects. Only yesterday I received a letter signed by twelve doctors who had been taking a post-graduate course at Cambridge and wished to express to me their sense of the benefit received. I am sure there are many more in the same position and it is for that reason that I am so deeply interested in the project now approaching realization of the establishment of a post-graduate medical school in London. (Applause.) When that school is finally established I believe a considerable proportion of general practitioners from all over the country will find it possible to come to London and take instruction under the first physicians and surgeons of the day. I believe, too, that they will not only learn when they come here, but that they may even teach as well for the danger always is that those who are responsible for the education of students may get a little separated from the practical problems which confront the man in general practice every day. (Applause.)

I do not think that any Minister or Health responding to this toast should omit all allusion to the housing conditions of the people. I have to be a little cautious in speaking about housing because if I express the mildst form of satisfaction someone accuses me of declaring that the housing problem is solved. It is not solved, but do you realize that in the last twelve months new housing accommodation has provided in this country for nearly one million persons. Surely it is unreasonable to withhold us to congratulate ourselves upon an achievement as satisfactory as that. (Applause.) It is an achievement all

the more satisfactory because it opens up the path towards the tackling of a problem which is much older than the shortage of houses—namely, the slum problem. It is customary to talk of the slum problem as though slum clearance were the only way in which it could be tackled. I should like to call your attention to certain figures which seem to me highly significant. Under the existing law the initiative for dealing with the problem of the slums lies with the local authority, but the Government undertakes to provide half the cost of approved schemes. Last year at the Ministry of Health we confirmed eight schemes of slum clearance involving altogether 923 houses and other buildings. The schemes contemplated the demolition of those 923 houses, and to that extent added to the problem of shortage and in the previous year—the last year in which the figures are available—528,000 houses were reconditioned, repaired, and made fit for occupation at the instance of the local medical officers of health and their staffs—that is to say, 500 times as many houses were dealt with under that procedure as under the procedure of slum clearance. To anyone who is looking for the most rapid and economical way of dealing with the slum problem those figures offer much food for thought.

If I may mention some minor activities of the Ministry of Health I would remind this assemblage that during the past year we made strenuous efforts to secure for the public cleaner milk, purer food, and a less smoky atmosphere, and the public showed its appreciation of our efforts in the usual way! (Laughter.) I remember someone saying—I believe it was in this very Association—that not until three Cabinet Ministers died in one day, and their deaths were certified as being due to fog, would there be any hope of Government legislation with regard to smoke. Well, we have had the legislation, and there have been no deaths of Cabinet Ministers. If the Minister of Health before long comes to an untimely end his death will not be certified as due to natural causes, it will be a case of wilful murder with a strong recommendation from the jury for mercy in view of the provocation occasioned by the late Minister's excessive zeal for legislation. (Laughter.) But I did not accept my present office in order to sit down and look on, and I have two bills in Parliament at the present time which I hope to see on the Statute Book before Christmas—the Nursing Homes (Registration) Bill and the Mental Deficiency Bill—both of them important, and the latter extremely urgent. After Christmas one must not prophesy, but among the subjects which seem to me to call for legislation are the slum problem, of which I spoke just now, the question of lunacy, on which we have recommendations from the Royal Commission, and in connexion with which I think we shall have to consider very seriously whether the present law sufficiently protects the position of the certifying doctor—("Hear, hear!")—and the question of national health insurance, in connexion with which I should like very much to see established a system of specialist services. Above all there is the question of the reform of the Poor Law. One of the considerations which weighed with me most powerfully when I decided to embark upon this question of Poor Law reform was the possibility which it seemed to me to offer of promoting the efficiency of our institutions. We have had some very interesting observations by Mr. Soutter upon the question of co-ordination and the desirability of linking up the various bodies engaged in institutional treatment. The much of medical and surgical science every one makes more imperative the need for institutions in which alone can be combined the equipment and specialist skill necessary to give the most effective treatment. I am convinced that without some greater co-operation between the various classes of institutions there is serious danger lest the great voluntary system, the glory of our country, be squeezed out—a contingency which I should regard as a disaster. But it is equally clear to me that one of the first steps towards co-operation would be to reduce the number of classes of institutions from three to two—to make the Poor Law infirmities into municipal hospitals and so cut away at a stroke half the difficulties. The stigma of pauperism would disappear, negotiations would be facilitated, vested interests would be reduced, friction would largely be lessened and with

a closer link between those hospitals which are supported out of public funds and those which are supported by voluntary subscription we should make a nearer approach to the ideal of hospital treatment being made available to every citizen. The reform of the Poor Law is essentially a great health measure, and I should feel myself deeply encouraged and heartened in the task I have before me if I felt that I carried with me your confidence and support. I trust that the friendly and mutually respecting relations between the British Medical Association and the Ministry of Health will continue, and for my part, having, what not every Minister can claim, the office which above all others is most agreeable to me, because it was the prospect of doing something towards improving the national health which first tempted me into politics, I can declare that the greatest help and encouragement in my work is the feeling that I have with me the sympathy and goodwill of the medical profession. (Loud applause.)

#### "The Guests"

Dr R. W. LEE, LL.D., briefly proposed the toast of "The Guests," coupling with it the names of the Earl of Birkenhead and Dr. Raymond Crawford, Chairman of Council of Epsom College. With regard to the former, he said, it would be superfluous to speak of his remarkable and dazzling career. To whatever party in the State a man owed allegiance he could join in doing homage to Lord Birkenhead's great gifts as lawyer, statesman, and man of letters. The other "victim" was one of the hardest workers in the cause of medical charity, and Dr. Lee took advantage of the occasion to appeal to the 33,000 members of the British Medical Association for a more effective support of the medical charities.

THE EARL OF BIRKENHEAD said that in view of the interest of the hour he would add little to the "excellent and adequate rhetoric with which we have been indulged." He had had it in mind to recommend to members of the British Medical Association a medical career in India. He could not develop the topic that evening, but he would take an early opportunity of doing so, and he begged the Association to use its great influence in making known to the younger members of the profession how great a career might still await a young adventurous man in India. Doctors begin as medical students, and everyone knew the kind of men they were as students, but quite suddenly they emerged into a premature middle age, with an air of respectability and a bedside manner. This startling change took place in about a period of three years. He had listened to the speeches that evening in some bewilderment. Mr. Soutter had explained to the company that nobody nowadays need die, owing to the resources of prevention which he and his friends were developing, and then Mr. Chamberlain had spoken of birth control in such a manner as to suggest that presently nobody would be born. If nobody could die and nobody could be born it seemed to him that there would be established what might be termed a "reasonable equipose."

Dr. RAYMOND CRAWFORD, Chairman of Council of Epsom College, who also responded to the toast, said that he thought the British Medical Association had rendered a service to the profession in pointing out the inadequacy of the support which the medical charities had received from the profession in the past, and in forming a committee specially charged with the duty of promoting the welfare of such charities. The Association, however, might have done more wisely not to have instituted a special fund of its own, but to have appealed solely and only for the existing charities. He agreed that the Association by reason of its organization, which covered the whole profession, was an admirable body for the collection of money, but he thought the distribution of the funds might most properly be entrusted to a small impartial committee, consisting, say, of the President of the Association and the Presidents of the Royal Colleges. He apologized for introducing a note which might seem like criticism, but he represented an old charity, and he asked those present to imagine the feelings of nestlings when they found a late young cuckoo in the nest. But it was a great and worthy task to bring home to the profession the fact that it needed only the sacrifice by each member of one guinea a year to

remove the shadow of destitution from those members of the profession and their families who had fallen upon hard times.

#### 'The Chairman'

Sir EWEN MACLEAN proposed the health of the Chairman, and mentioned that the Council had that day invited Dr. Brackenbury to be the ambassador of the Association at the South African Medical Congress in March next, an invitation which he hoped Dr. Brackenbury would be able to accept.

Dr. BRACKENBURY, after acknowledging the compliment, said that he hoped there would be no misunderstanding as a result of the remarks of Dr. Raymond Crawford. So far as he could interpret Dr. Crawford's wishes, the same were in the already being carried out by the Association and the organization which Dr. Crawford thought most suitable for attaining the ends he had in view was in fact the very organization which the Association had established. There was not a shadow of foundation for any suspicion of rivalry or disharmony in what the Association was doing in the cause of medical charity, and though he thought the present would surely have settled it, it is that they had had no previous information of the whole of the work which the Association collected—and which it was going to collect on a larger scale in the future—were distributed by the Association among the existing medical charities. He hoped that no one would infer that there was any inharmonious relationship between what the Association was doing and existing charities which it was its purpose to help. (Hear, hear!)

The proceedings closed with the singing of "Auld Melodie." During the dinner a programme of music was provided, and afterwards the oratory was pleasantly diversified by some excellent singing and entertainment.

### PROCEEDINGS OF COUNCIL

A MEETING of the Council took place on Wednesday, October 12th, at the House of the Association, Tavistock Square. Dr. H. B. BRACKENBURY, Chairman of Council, presided, and there were present:

Sir Robert Philip (President), Dr. C. O. Hawthorne (Chairman of Representative Body), Mr. N. Bishop Harman (Treasurer), Mr. P. G. Hogarth (Past President), Sir Ewen Maclean (President Elect), Dr. A. Landon (Deputy Chairman of Representative Body), Sir Robert Bolam (Immediate Past Chairman of Council), Dr. J. Barrett Anderson, Dr. J. Arrington, Dr. F. J. Baidou, Sir F. B. Smith, Sir Alfred Blenkinsop, Dr. J. W. Bone, Dr. H. C. Bransford, Dr. G. F. Bullock, Dr. H. G. Dain, Dr. C. E. Douglas, Mr. W. McAdam Eccles, Dr. D. E. Finlay, Dr. T. Frazer, Dr. F. J. Gomez, Dr. F. W. Goodbody, Dr. P. Wallace Henry, Dr. G. B. Hillman, Dr. J. Hildon, Dr. I. W. Johnson, Dr. P. Landon, Dr. D. E. K. Le Fleming, Dr. R. W. Leslie, Dr. E. Llewellyn, Dr. J. Livingston, Sir Richard Luce, Mr. P. Dr. J. A. Mackenzie, Dr. S. Morton Mackenzie, Dr. J. G. McCutcheon, Dr. A. McKinnell, Dr. O. Marriot, Dr. J. C. Mathew, Dr. G. W. Miller, Dr. Chr. Murrill, Mr. A. W. Nuthall, Lieut. Colonel F. O'Connell, Dr. W. Paterson, Dr. J. Patria, Dr. R. C. Pearce, Dr. J. P. Pritchard, Dr. F. Radcliffe, Dr. E. H. Snell, Mr. H. S. Soutar, Dr. E. A. Starling, Dr. Lockhart, Dr. W. Stephen, Dr. John Storer, Lieut. Colonel Ashton Street, Dr. W. E. Thomas, Dr. G. C. Trotter, Mr. E. B. Turner, Sir Jenner Verrall, Dr. F. Walker, Mr. A. M. Webber, and Dr. W. F. A. Worley.

Apologies for absence were received from Mr. T. P. Dunhill, Group Captain J. J. Poche, Dr. Dini Watson, and Sir William de Courcey. The latter

#### Preliminary Business

The Chairman reported the deaths of our former members of Council—Dr. E. G. Barrow, Dr. C. W. Daniel, Dr. W. J. Tyson, and Mr. J. W. Greer. The only one of these personally known to him was Mr. Greer, who did much for the profession in his own locality of South Wales and for the Association as a whole, but he knew that the others also did excellent service. The members stood for a few moments in memory of these late colleagues.

It was reported that an acknowledgment of the resolution passed by the Representative Body during their Majesty's visit to Edinburgh had been received from Lord Sarnfordham, private secretary to His Majesty, in the following terms:

"I have submitted to the King and Queen the resolution passed at the Annual Meeting of the British Medical Association in Edinburgh for which I am commanded to express Their Majesties' thanks."

A long and admirable report on the Annual Meeting at Edinburgh by the Honorary Local General Secretary, Dr.ergus Hewat, was printed and circulated to the members of the Council. Dr. Hewat was thanked for his report, the suggestions in which had been considered by the Arrangements Committee. A very cordial vote of thanks of a comprehensive nature was carried by acclamation to the many who had contributed to the outstanding success of the Edinburgh meeting.

The Council agreed unanimously and with acclamation to recommend to the Representative Body that the Past President, Mr. R. C. Hogarth, be elected a Vice-President of the Association in recognition of his services during his presidential year.

It was reported that Mr. W. E. Hempson, Solicitor to the Association, had offered to place at the disposal of the Council a mark of his esteem for the Association and appreciation of its happy relations therewith on the occasion of his retirement, a sum of twenty-five guineas as a prize to be awarded for the best essay or treatise on some phase or branch of public health. The Council thanked Mr. Hempson, accepted his offer, and referred the arrangement to the Science Committee.

An offer was also reported from Sir Hop Williams, on behalf of Mr. T. Watkin Williams, who was General Secretary of the Association from 1863 to 1872, to present a replica of the medal connected with the Hastings Prize, founded in 1820. The intention of the Hastings Prize was that on or two gold medals should be given annually for essays or papers, but about 1877 it fell into abeyance chiefly because of the lack of essays of a character to merit the award. The offer of the replica which had been presented by the artist to Mr. Watkin Williams was accepted with thanks.

The New Zealand Branch having invited to its annual conference an official visitor from the home Association, Mr. Victor Bonney, who had intimated his willingness to accept the invitation, the Council agreed that Mr. Bonney be appointed an official representative of the Association at the conference which is to be held in February next.

#### Representation at the South African Medical Congress

At the meeting of the Council held at Edinburgh in July, it was resolved to ask the President and Sir Robert Bolam to act as delegates to the Association to the twenty-second South African Medical Congress to be held at Bloemfontein in March next. A great deal of interest taken in this event in South Africa and the officers of the Medical Association of South Africa (British Medical Association) are anxious that this be the first annual general meeting of the Association since its incorporation and the first scientific meeting of the profession in South Africa displacing the old Congress, should be attended by some representative person or persons from the Association at home more especially because a party from the American College of Surgeons is expected.

Unfortunately both Sir Robert Philip and Sir Robert Bolam now intimated their inability to accept the invitation. Dr. Morton Mackenzie urged that the whole question of overseas representation should be placed on a more settled basis. Sir Jenner Verrall also pleaded for the adoption of some regular principle. The first thing obviously to do in each case was to determine whether the Association ought to be represented and having done that the Association ought to pay all the expenses of its delegate or delegates. Sir Robert Bolam believed that the time had come when the Association must accept the periodical spending of certain sums of money on these visits if the bonds with the overseas Branches or affiliated bodies were to be maintained. This was a point on which the Council should overcome the natural qualms of the Treasurer and the Finance Committee. Mr. McAdam Eccles, Sir Ewen Maclean, and Dr. Briowe all urged that it was important that the Association should be represented at the South African meeting.

Eventually the matter was adjourned for private conversations, and at a later period of the sitting Sir Robert Bolam made the formal proposition that Dr. Brackenbury, the Chairman of Council, be asked to make the journey as official delegate of the Association. He indicated how it would be possible having regard to the sailings of boats for the Chairman to leave immediately after the February Council meeting and to return just in time for the Council meeting in April. He felt that this occasion in South Africa was one at which the official side of the Association should be represented, and there could be no more suitable representative than Dr. Brackenbury.

The motion was carried immediately with hearty applause. Dr Brackenbury expressed himself sensible of the compliment, but said that, for domestic and other reasons, he could not give an answer at the moment to a proposition which had never entered his head until that afternoon.

Discussion took place on the course to be taken should Dr Brackenbury, after all, find it necessary to decline the invitation, and it was agreed that in those circumstances, which it was hoped would not arise, the matter should stand over until the December meeting of the Council.

#### *Groups in the Association*

Petitions were received by the Council, one of them signed by thirty-one members of the Association engaged in the study and practice of pathology, asking that a Pathologists' Group should be established within the Association, and the other signed by thirty spa practitioners, asking for a Spa Practitioners' Group. The first petition suggested that for the Pathologists' Group all members of the Association attached as salaried officers either on a whole or part time basis to the staff of a laboratory devoted to pathology or one of the allied sciences, or directors of the pathological service of a voluntary hospital, though unsalaried, should be eligible for membership. The signatories of the second petition considered that the qualification for members of the group should be that they regularly prescribed the mineral waters or baths of the spas in which they resided, or were on the staff of a hospital or clinic where the use of the local mineral waters was part of the routine treatment.

The Chairman said that it must be borne in mind that these were the two groups which the Council had in contemplation when it decided that groups might be established.

Dr Morton Mackenzie said that he was a little troubled about the definition of the pathologists, and he thought the definition suggested should be considered as only provisional. Sir Robert Bolam noted that the signatories were mostly clinical pathologists; those who did laboratory work pure and simple did not appear to be represented.

After some discussion it was agreed, in view of the difficulty of definition in the case of the pathologists, that the question of forming that group and the definition of eligibility be referred to the Science and Organization Committees for their prompt consideration. The same difficulty did not arise in the case of spa practitioners, and sanction was given for the formation of this group to be proceeded with, the first meeting to be held in London at an early date.

The question of the formation of groups within the Association also came forward on the report of the Organization Committee. Dr Morton Mackenzie, chairman of that committee, said that at the Representative Meeting it was argued that the class or classes of persons to be included in a group should be defined by the group committee. The Organization Committee, however, felt that this was a matter which must be left in the hands of the Council. It would prove unworkable for the different group committees to make their own definitions. At the same time it was desired to bring the group committee into consultation, and it was proposed that the question of the suitability of any individual person for membership of a group should be determined by the Council after such consultation with the group committee. A recommendation to this effect was agreed to.

#### *The Safeguarding of Private Practice*

The Council considered the three resolutions adopted by the Annual Representative Meeting with regard to the inroads made on the sphere of private medical practice by the development of services under the auspices of the State, voluntary bodies, and others, by the transference of the treatment of many diseases and conditions to whole time medical officers, and by the hospital contributory schemes in many parts of the country. It decided to set up a special committee to consider and report on these resolutions, the committee to consist of the officers of the Association *ex officio*, the chairmen of the Medico-Political, Public Health, and Hospitals Committees, and of the Maternity and Child Welfare Subcommittee, Mr E. B. Turner, Dr F. Radcliffe, Dr Eustice Hill, Dr Astley Clarke, Dr West Watson, Dr E. R. Forth, Dr M. W. Renton, Dr E. A. Strickland, Dr E. H. Sell, Dr W. W. Jamison, and Dr Christine Marshall.

#### *International Medical Sea Code*

It was also agreed, following a previous resolution of the Council, to set up a special committee to consider the possibility of forming an international medical sea code. It had been ascertained that the Admiralty, the Board of Trade, and the Ministry of Health were willing to appoint representatives on such a committee. The Council decided that the personnel of the committee should include, in addition to the officers of the Association *ex officio*, representatives of the Government departments just named, as well as, if possible, a representative of the Postmaster General, representatives of some of the principal steamship companies, certain experts on the wireless telegraphy side, the editor of the *Ship Captains' Guide*, and two other members of the Council, Dr John Bone and Dr William Paterson.

#### *Payment to Hospitals in Accident Cases*

Mr Soutar, chairman of the Hospitals Committee brought forward the opinion of counsel (Mr J. H. Stamp) as to the legal position and powers of voluntary hospitals in regard to the recovery of money for the treatment of patients, a matter on which some doubt had been expressed at a previous meeting of Council when authority was given to obtain counsel's opinion. One point expressed in this lengthy opinion was that it would be very difficult for a hospital to establish a legal claim to charge for emergency services in accident cases. In serious cases the victim was not in a position to enter into any contract before treatment, and in few cases would it be practicable to raise with the victim any question as to the terms upon which he was to be treated, but it was an obvious injustice (the opinion continued) that a person who had caused an accident through negligence, or had granted a policy of insurance covering treatment in case of accident, should escape liability because a charitable institution had given the necessary assistance. The opinion set out certain lines for an enactment which would make well-to-do people liable in any event for hospital treatment, and poor people only when they had a remedy over against others. The Hospitals Committee brought forward a recommendation to amend the hospital policy by the deletion of the words "from the insurance company" in paragraph 34, which at present read:

"In all cases of accident where medical attendance is given at a voluntary hospital and such medical attendance is covered either directly or indirectly by insurance, the hospital authorities should recover from the insurance company the full cost of maintenance and treatment of such patient."

This was proposed because the hospital had no legal power to recover money from the insurance company, and it was, indeed, doubtful whether it had legal power to recover from the individual.

Dr Radcliffe wished to substitute the words "ought to be able to" for the word "should" in this paragraph ["should recover the full cost of maintenance"]. He said that recently the Norwich Hospital had decided that all motor accident cases should go into the paying ward, but in view of the legal opinion it made no difference whether the cases went into the paying ward or into the free ward unless there was agreement on the part of the patient beforehand to go into the paying ward which was usually out of the question in road accidents. He thought the alteration he proposed corresponded better with the realities of the situation.

Sir Robert Bolam said that Dr Radcliffe's proposed wording reduced the whole thing to a pious opinion. If a hospital stated by notice that cases of this kind would be expected to pay the cost of maintenance and treatment, then the hospital came into much the same position as any private individual.

Dr Radcliffe's amendment was lost.

Mr McAdam Eccles said that when a person who was not able to pay met with a motor accident and brought a claim for damages against, for instance, the firm owning the motor car which had run him down—which firm was, or should be, insured in some company—there was always a sum set out on the claim, generally a substantial sum, for the treatment of the person, whether in hospital or elsewhere, the treatment being the service which had been rendered to him by a medical man. At present these cases were increasing in number, and the members of the medical profession were not getting their due. He thought the resolution ought to be passed as it stood, it was up to the hospital to claim the money from the person

who had been treated who was his person to receive money from the insurance company.

The recommendation was agreed to.

#### *Paying Patients in Hospitals*

Mr Souttar submitted a memorandum of the evidence which had already been given by the Hospitals Committee to the special committee under Lord Humber's chairmanship which had been set up by the King Edward's Hospital Fund to inquire into the question of hospital accommodation in London to persons prepared to pay more than the ordinary volume of hospital patients. He said that the evidence given on behalf of the Association before the Privy Bds. Committee was called were well received and a friendly discussion took place on the whole subject. There had now been time for the memorandum to be submitted to Council later it was presented.

Dr Bone raised the question of paying patients in the ward or voluntary hospitals which were not public wards, no provision seemed to have been made for this in the memorandum. Mr Souttar replied that it came under the class of private paying patients in nursing homes attached to hospitals. Hospitals could make private arrangements in numerous ways.

Mr Bishop Harman speaking with regard to the provision laid down in the memorandum that in the case of private paying patients in nursing homes attached to hospitals should be open to the patient to elect any registered practitioner as his attendant, said that when the evidence was presented the question was raised by those hearing the evidence as to the conditions in America and the case of Johns Hopkins Hospital where there was an independent nursing home was cited against him. But on the other side he was able to show that in New York 75 per cent of the registered practitioners were attached to a hospital in some capacity or other so that conditions in the United States evidently varied. In the West London Hospital there were 20 private beds which were an integral part of the hospital but private practitioners were allowed to come in and consultations were held. In that way something of the elasticity of arrangements which the Association desired to see was secured.

The report was approved.

#### *Alleged Abuse in regard to Electrical Treatment*

Dr Haslthorne for the Science Committee brought forward a letter which had been received from Dr C. B. Heald, a former member of Council who drew attention to a propaganda sponsored by an association which represented the big electrical firms in favour of the installation of ultra violet light in the home for people to give themselves this treatment more or less indiscriminately. Dr Heald stated that he had evidence that it was proposed to teach dealers in ordinary electrical equipment the methods of application of various treatments by electro-medical apparatus with the object of inducing ordinary customers to buy this apparatus in return for free instruction. Dr Heald also stated that he was aware of very large numbers of cases in which practitioners had sent patients for electrical treatment to unqualified persons without any attempt either to control or specify the treatment. The Science Committee to which Dr Heald's letter had been sent felt that the matter alleged were not entirely within its compass and that it might be well for the Council to set up a joint committee on which the Science Committee should be represented to consider this important subject. There were two allegations in Dr Heald's letter each falling into a separate department. The first was a matter upon which the Association might feel justified in issuing a public warning and for this purpose the Science Committee would be the right machinery. But as to the second allegation that medical practitioners sent patients without accompanying directions to unqualified persons this proper came under the purview of the Ethical Committee.

The Chairman stated that the Insurance Act Committee was also interested in this matter from the point of view of whether ultra violet light treatment was a treatment which was to be effected from general practitioners as a class or should be regarded as specialist treatment in which case a different administrative procedure was involved. There was no certain possibility of abuse here also.

It was agreed to refer the two allegations in the letter respectively to the Science and Ethical Committees.

#### *Scottish Affairs*

Sir Robert Bohn, as chairman of the Building Committee, reported that following upon previous resolutions of the Council a scheme for extension of the Scottish House at Edinburgh had been entered into by the purchase of the old lunatic house in Drumcraig Gardens and the reconstruction of portions of the two houses. The estimated cost of reconstruction was about £5000. The probable return from letting or portions of the two houses was £440 a year and the annual rates £250.

Dr C. W. Miller on behalf of the Scottish Committee thanked the Council for the action it had taken with regard to the Scottish House which he hoped would prove a great asset to the Association.

The Scottish Committee reported on the Reorganization of Office (Scotland) Bill which proposes to abolish the Scottish Board of Health and to substitute therefor a Department of Health for Scotland under the Secretary of State with a secretary and offices in Edinburgh. The Scottish Committee's view was that the medical interest and the interests of public health generally would be better served by a department with a principal medical officer than a board even though the latter might contain one or more medical members and it therefore approved of the bill.

Dr Buchanan asked whether the principal medical officer would have direct access to the Secretary of State and on this question some discussion took place. The Chairman pointed out that there was no Minister of Health for Scotland, the Secretary of State for Scotland being concerned with all Scottish affairs not health alone. It was important to bear in mind the need for securing direct access to the principal medical officer to the political head of the department—a thing which in the case of the English Ministry of Health had been watched very carefully and not without anxiety—whether in the case of Scotland the Secretary of State or the Parliamentary Under Secretary for Scotland who was vice president of the Scottish Board of Health. Dr Miller promised that the discussions on and the possible amendments to the bill would be carefully watched from this point of view.

No special resolution was passed but the report of the Scottish Committee was approved.

#### *Other Committee's*

The Public Health Committee's report was adopted without discussion. Apart from routine matters it contained one recommendation to the Representative Body (which was agreed to by the Council) on the question of when a tuberculosis officer should be considered to be a subordinate officer and when he should be considered as an officer in charge of a department and therefore entitled to a commanding salary of £750. The criterion for placing him in the latter category would be the fact that the clinical work in his area is not subject to detailed supervision by a chief medical officer. This was in amendment of a previous resolution of the Council and followed upon a suggestion made by the Secretary of the Ministry of Health who had pointed out that the higher salary was appropriate where the tuberculosis officer was in fact independent or detailed control of his clinical work but that this did not depend as the former resolution had suggested upon the size of the county.

A short discussion took place upon the report of the Arrangements Committee, which dealt chiefly with the arrangements for Sessions at the Annual Meeting at Cardiff and the appointment of a sectional officer. The Committee proposed following up a suggestion to that effect from the Honorary Local General Secretary at Edinburgh to abolish the ordinary members' badge but several members of Council stated that this badge had been found very useful and the Council decided that it should be retained.

For the Office Committee Dr Brackenbury reported that it had come to the knowledge of the Association that pamphlets based on the Association's publication *Secret Remedies* were prepared and sold by unauthorized persons. A copy of the booklet purchased in Hyde Park had been sent to the Solicitor. This booklet was marked a copyright by a certain individual who proclaimed himself to be working in conjunction with the British Medical Association in a campaign to prevent the exploitation of the public by unscrupulous chemists and manufacturers and by arrangement with the Association he was prepared to sell

certain compounds at a cheaper rate, the Association's analysis guaranteeing that they were exactly the same as the mixtures advertised. The Council agreed to take legal steps to prevent this unauthorized use of the Association's name and its publications.

Dr Morton Mackenzie, for the Organization Committee, reported that the membership of the Association at the beginning of September stood at 33,000. He read the names of a number of honorary secretaries of Divisions or Branches who had relinquished office during the last six months, and whose services were considered to be deserving of special recognition. Among these was one member of the Council, Dr John Stevens, lately secretary of the Edinburgh Branch. It was resolved that a suitable letter be sent from the Council in each of the cases. Dr Mackenzie also referred in terms of high appreciation to the recent visit by the Medical Secretary to the Irish Branches, which was the subject of a long report by the Medical Secretary circulated to the Council.

The Finance and Journal Committees brought forward only routine business. On the Building Committee Sir Robert Belam, as chairman, made a brief private statement with regard to the clearance of the site in connexion with the building scheme at headquarters. The report of the Ethical Committee involved a private discussion on the conduct of a member of the Association. The Psycho Analysis Committee, under the chairmanship of Dr Langdon Down, reported that it was issuing a questionnaire on psychological analysis to those who were known to be practising special modes of psychotherapy, as it believed that the replies to such an inquiry would assist the committee in its work.

The Council rose at the unusually early hour of 4.30 p.m.

## British Medical Association

### CURRENT NOTES

#### Proposed B.M.A. Masonic Lodge

It is proposed to apply to Grand Lodge of England for a charter for a B.M.A. Lodge of Freemasons. This Lodge, if constituted, would be situated in London, and would meet by dispensation once annually at the place of the Annual Meeting of Association, and during that meeting. It is suggested that the Lodge should include not only English Masons but Scottish, Irish, and Oversea members. Masons who are members of the British Medical Association who would like to be founders, or joining members after the founding, are invited to communicate with any of the undermentioned: Mr H. S. Soutter, C.B.E., F.R.C.S., 58, Queen Anne Street, London, W.1; Dr J. A. Macdonald, LL.D., 19, East Street, Trunton; Dr J. R. Pydlersch, Doldi, Llangefni, Anglesey; Dr F. J. Gomez, South Petherton, Somerset; Dr I. W. Johnson, Brook House, Bury, Lancs.; Dr F. J. Baidon, 42, Hoghton Street, Southport; Dr R. W. Leshe, LL.D., St Helens, Stranstown, Belfast; Dr E. Lewys-Lloyd, Rhianfa, Neptune Road, Towyn, N. Wales; Dr J. Armstrong, Wellington Street, Ballymena, co. Antrim; Dr G. C. Anderson, B.M.A. House, Tavistock Square, London, W.C.1; or Dr H. C. Bristowe, Wington, near Bristol (Acting Secretary). A meeting will be called later in London of those who signify their wish to be included among the founders.

#### Ophthalmic Benefit

The Ophthalmic Committee, on Friday, October 14th, elected Dr R. Wallace Henry chairman for the current session. The committee had under consideration the suggestion approved by the Representative Body at Edinburgh for providing ophthalmic benefit under the National Health Insurance Acts through clinics in large centres, as an arrangement auxiliary to existing schemes for attendance by ophthalmic surgeons. A special subcommittee was appointed to draw up a scheme for submission to the full committee.

#### The Katherine Bishop Harman Prize

In April, 1926, Mrs Katherine Bishop Harman, M.B., B.S. Lond., presented to the Association the sum of £1,000 for the establishment of a prize to be awarded by the

Council for the encouragement of research into the disorders incident to maternity. The following are the regulations governing the award of the prize:

1 The purpose of the prize is the encouragement of study and research directed to the diminution and avoidance of the risks to health and life that are apt to arise in pregnancy and child bearing. Its money value shall be the net annual income of the capital fund as this has accumulated during a period of two years. The first award shall be made in 1928 and essays must be forwarded to the Medical Secretary of the Association, British Medical Association House, Tavistock Square, W.C.1, not later than December 31st, 1927.

2 As a general rule the prize will be awarded for the essay which, in an open competition is judged by the Council to be most helpful to the end for which the prize is established and the Council may at its discretion either prescribe a special or limited subject for the competition or may leave to the competitors an individual selection of the work they wish to present provided that this falls within the purpose of the prize. In every instance the award made by the Council shall be final.

3 Any medical practitioner registered in the British Empire is eligible to compete for the prize.

4 Should the Council on any of the selected dates decide that no justification for the award of the prize exists, the prize shall be offered again in the year next following this decision, and in this event the money value of the prize on the occasion in question shall be such proportion of the accumulated income as the Council shall determine.

5 Each essay must be typewritten or printed in the English language must be distinguished by a motto and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address.

The Council has decided that no specific subject shall be prescribed for the Katherine Bishop Harman Prize Competition, 1928, but that competitors be left free to choose the work they wish to present, provided that this falls within the regulations governing the prize.

#### Sir Charles Hastings Clinical Prize

The Council of the Association has decided that the Sir Charles Hastings Clinical Prize be again open for competition in 1928. The following are the regulations governing the award of the prize:

##### Regulations

1 The prize is established by the Council of the British Medical Association for the promotion of systematic observation, research, and record in general practice. It includes a money award of the value of fifty guineas.

2 Any member of the Association who is engaged in general practice is eligible to compete for the prize.

3 The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made.

4 Essays, or whatever form the candidate desires his work to take must be sent to the British Medical Association House, London, W.C.1, not later than December 31st, 1927 and the prize will be awarded at the Annual General Meeting of the Association to be held at Cardiff in July, 1928.

5 No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work.

6 If any question arises in reference to the eligibility of the candidate or the admissibility of his essay, the decision of the Council on any such point shall be final.

7 Each essay must be typewritten or printed, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto, and enclosing the candidate's name and address.

8 The writer of the essay to whom the prize is awarded may, on the initiative of the Science Committee, be requested to prepare a paper on the subject of his essay for publication in the *BRITISH MEDICAL JOURNAL* or for presentation to the appropriate Section of the Annual Meeting of the Association.

9 Inquiries relative to the prize should be addressed to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

#### Medical Appointments Abroad

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas, which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

## Association Notices

ELECTION OF MEMBERS OF COUNCIL, 1928-29,  
BY BRANCHES OUTSIDE UNITED KINGDOM

NOTICE is hereby given that **Nominations** of Candidates for election as Members of Council by the corresponding Branches outside the United Kingdom in which there are vacancies (see below) for a period of either three two or one year **must be forwarded** in writing, so as to reach the Medical Secretary **on or before February 8th, 1928**.

Nominations must be signed by not less than three Members of any Branch in the Group and must be in the following form or in one to the like effect:

## NOMINATION FOR

(By one less than Three Members of the corresponding Branch)

We the undersigned hereby nominate  
of \_\_\_\_\_  
to be elected by the \_\_\_\_\_  
Branches as a Member of the Council of the Association for the  
period of \_\_\_\_\_ years.  
Signed \_\_\_\_\_  
Branches

Date 1927

The election where contests occur will be by voting papers containing the names of all duly nominated Candidates issued from the Head Office British Medical Association House, Tavistock Square, London W.C.1 to each member of each Branch in the Group.

A notice will be published by the Council in the JOURNAL as soon as possible after February 8th 1928 as to any Group for which only one candidate has been nominated and is thereby elected. Not later than the second week in June 1928 a notice will be published by the Council in the JOURNAL giving the result of the elections for those Groups where there have been contests.

GROUPOUT (ABOVE LISTED) OF BRANCHES OUTSIDE THE UNITED KINGDOM FOR ELECTION OF MEMBERS OF THE COUNCIL OF THE ASSOCIATION 1928-29 IN CASES WHERE THERE ARE VACANCIES

ALFRED COX

Medical Secretary

October 2nd 1927

## BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH** CONVENTY DIVISION—A meeting of the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday November 1st at 8.30 p.m. The Chairman Dr W. Brazil will read a paper on medicine in lay literature.

**BORDER COUNTIES BRANCH**—A general meeting of the Border Counties Branch will be held at the Hevies Hotel, Keswick on Friday November 4th at 3 p.m. The Branch Council will meet at 2.30 p.m. Agenda: A British Medical Association lecture by Professor E. E. Gill on Liverpool on Anaphylaxis, the Schick and Dick tests and the method of immunizing diphtheria patient. Tea by invitation of the president.

**BORDER COUNTIES BRANCH DUMFRIES AND GALLOWAY DIVISION**—The next meeting of the Dumfries and Galloway Division will be held in the Dumfries and Galloway Sanatorium on Tuesday November 1st at 3 p.m. Dr Steven the medical superintendent will discuss the lay-out of the sanatorium and the new buildings will be visited. A demonstration will be given of the working of the new x-ray plant including the Potter-Buckley diaphragm and stereoscope. The use of the ultra violet light apparatus will also be shown comprising the carbon arc the tungsten arc and mercury vapour lamp. Tea will be supplied and the chairman (Dr Livingstone) has kindly undertaken to provide transport to and from Dumfries for members at a distance if early notice is given.

**EDINBURGH BRANCH SOUTH-EASTERN COUNTIES DIVISION**—The annual dinner of the South Eastern Counties Division will be held in the Royal Hotel, Galloway on Wednesday November 2nd at 7 p.m. when Dr N. P. Fairfax (Innerleithen) will preside. The special guests of the evening will be the Earl of Home, Sir Robert Philip (President of the British Medical Association) and Mr G. Thorneycroft (Lord Lieutenant of the County of Peebles). A large attendance of members of the Division is hoped for. Price of dinner tickets 12s. 6d. with an additional 2s. 6d. toward the cost of entertaining the official guests.

**KEY BRANCH DARTFORD DIVISION**—A general meeting of the Dartford Division will be held at King Edward Avenue Hospital, Dartford on Tuesday October 25th at 3 p.m. Dr Malcolm Donaldson, physician accoucheur to St. Bartholomew's Hospital will give the first of two lectures on ante-natal work.

**KEY BRANCH ROCHESTER CHATHAM AND CILLINGHAM DIVISION**—The quarterly meeting and dinner of the Rochester Chatham and Cillingham Division will take place at the Bull Hotel, Rochester on Wednesday October 25th at 7.30 p.m. The charge for dinner will be 6s. 6d. each, including wine. Morning dress.

**METROPOLITAN COLTIES BRANCH CITY DIVISION**—A meeting of the City Division will be held at the Metropolitan Hospital, King's Cross, London, on Thursday November 1st at 9.30 p.m. Dr W. Langdon Brown will read a paper on the not in a practical report.

**METROPOLITAN COLTIES BRANCH KENSINGTON DIVISION**—A general meeting of the Kensington Division will be held at St. Mary Abbe's Church, Kensington on Tuesday November 1st at 8.15 p.m. Agenda: An address will be given by Dr Christine Murrill on the need of a new form of cheaper nursing home accommodation for the poorer middle classes.

**METROPOLITAN COLTIES BRANCH LAMETH AND SOUTHWARK DIVISION**—The programme of meetings has been arranged for the coming year.

**NORTH BRANCH ALFRED COX**—A meeting of the North Branch will be held at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**— I** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**D 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Jan 11th** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**—** (Part 1) At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**F 1 8 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**2 1** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Mar 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Apr 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**May 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**June 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**July 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Aug 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Sept 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Oct 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Nov 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**Dec 1 h** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**—** At 11.15 in the evening at the North Branch Club, 11, St. Paul's Church, London, on Tuesday November 1st at 8 p.m. Agenda: A paper will be read by Dr A. L. Davis on the clinical meeting.

**SURREY BRANCH GUILDFORD DIVISION**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, November 3rd, at 4 o'clock. Paper by Messrs Butler and Sheaf: Surgical and other experiences in America. Tea served at 3.45 p.m.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH HEREFORD DIVISION**—The fourth of the series of post graduate lectures arranged under the auspices of the University of Birmingham will be given by Dr Emanuel on cardiac irregularities at the Herefordshire General Hospital on Friday, October 28th, at 3.30 p.m. Tea provided.

**YORKSHIRE BRANCH DEWSBURY DIVISION**—The following programme of meetings has been arranged by the Dewsbury Division:

Nov 4th	At the Batley Hospital	Professor W. E. Dixon (Cambridge)
	Tobacco Smoking.	
Dec 2nd	A Meeting at Dewbury and District Infirmary.	
Jan 13th	At the Batley Hospital	Mr L. R. Braithwaite (Leeds)
	Chronic Pains in the Right Iliac Fossa.	
Feb 3rd	At the Dewsbury Infirmary	Dr G. Cooper (Leeds)
	Radio therapy.	
Mar 6th	Annual Dinner.	
April 6th	A Meeting at the Batley Hospital.	
May 4th	Annual Meeting at the Dewbury Infirmary.	

There will be light refreshment at the close of meetings, which will be held at 8.15 p.m.

**YORKSHIRE BRANCH SHEFFIELD DIVISION**—A general meeting of the Sheffield Division will be held at the Church House, St. James Street, Sheffield, on Tuesday, October 25th, at 8.30 p.m. Agenda: Report of representatives—Dr Forbes, Dr Mackinnon, and Dr Brockman, and vote of thanks. A general meeting of the Division will be held on Friday, December 9th, at the University, Sheffield, at 8.30 p.m., when a British Medical Association Lecture will be delivered by Mr H. Beckwith Whitehouse, M.S., F.R.C.S., on practical applications of recent views on the menstrual functions.

**YORKSHIRE BRANCH WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION**—A clinical meeting of the Wakefield, Pontefract, and Castleford Division will be held by kind permission of Dr J. Shaw, Bolton, at the West Riding Mental Hospital, Wakefield, on Sunday, October 23rd, at 3 p.m.

## Meetings of Branches and Divisions

### METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION

The first clinical meeting of the Lambeth and Southwark Division was held at the Belgrave Hospital for Children, Clapham Road, S.W.9, on October 12th. Dr EDWARD CANTLEY, senior physician to the hospital, showed many interesting cases, including a boy, aged 9, suffering from rheumatic fever complicated by pericarditis, consolidation of left lung, and rheumatic nodules, a girl, aged 3, with rheumatoid arthritis involving both wrists and knees, and a boy, aged 6, who had recovered from an attack of meningitis in which the cerebrospinal fluid had contained 800 cells per cubic millimetre.

### SURREY BRANCH GUILDFORD DIVISION

A meeting of the Guildford Division was held at the Royal Surrey County Hospital, Guildford, on October 6th. Sir STCLAIR THOMSON delivered a lantern lecture on Lister and his work for humanity. At its conclusion a vote of thanks was accorded to the lecturer for his interesting address. Sir Stclair Thomson, in acknowledging the vote of thanks, offered to present to the hospital a coloured reproduction of a portrait of Lister, which was gratefully acknowledged by the CHAIRMAN.

### Annual Dinner

The annual dinner was held in the evening at the Angel Hotel, when Mr H. B. BUTLER presided. After the usual loyal toast had been honoured, Mr J. A. SHERRER submitted the toast of "The Mayor and Corporation of Guildford." He recalled the interest the Mayor had taken in Poor Law institutional work, and mentioned the coming transfer of it from the guardians to the corporation, in conjunction with other local authorities. He urged the fullest co-operation between the British Medical Association and those responsible for the civic part of the work. The Mayor, in acknowledging the toast, expressed his admiration for the gratuitous work done by local members of the medical profession both at the hospital and the Poor Law institution. He desired to express his thanks to Dr Pierce, medical officer of health for Guildford, and wish him good health in retirement. The toast of "The Guests," proposed by the CHAIRMAN, was responded to by Sir STCLAIR THOMSON and Dr PIERCE.

Mr F. W. SMALLPRICE proposed the toast of "The British Medical Association." He said that during the twenty-four years of his time of office as coroner he had had dealings with all medical men practising in the borough, and he desired to thank them for their great kindness. He had always had harmonious association with them. He suggested that the British Medical Association should consider the question of attendance on motor accident cases, which he said were brought to the Royal Surrey County Hospital for attention. They occupied a number of beds and took up a considerable amount of time of the medical staff, who had to attend them for nothing. He considered that if an individual could afford a motor car or motor cycle he could afford to pay something for the attention received. Dr ARNOLD LYNDON, in responding to the toast, said that the prestige of the British Medical Association with its 33,000 members and 320 branches and divisions never stood higher than it did at the present time. Its good work had been done by the Association to promote the cause of preventive medicine and Dr Lyndon mentioned as

instances of this the early publication of reports on mortality in connexion with childbirth and on rheumatic heart disease in children, which it was hoped would assist in ameliorating the present position.

### SUSSEX BRANCH BRIGHTON DIVISION

A combined meeting of the Brighton Division and the Sussex Law Society was held on October 7th, when Mr JOHN FLOWERS, barrister-at-law, gave an address on questions of procedure and evidence in criminal cases. Mr Flowers criticized the prevailing custom of a prisoner selecting, for his defence, more or less at random, any counsel who happened to be present in court. He contrasted favourably the criminal procedure in this country with that in others, and strongly advocated that the presiding judge at Quarter Sessions and Assizes should not learn beforehand the previous record of prisoners, which might militate against a fair and impartial summing up of the facts of the case. He disagreed with the idea of employing professional jurymen, and preferred the present jury system. He dealt at length with the admissibility of evidence tending to show that a prisoner had committed criminal acts other than the one mentioned in the indictment. Dr T. S. TAYLOR, J.P., opened the discussion and expressed his belief that police charges were nearly always justifiable. He was followed by Dr L. A. PARKS, Dr R. WHITTINGTON, and Mr W. C. HILLIER, the Chief Constable of Hove.

### YORKSHIRE BRANCH WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION

A meeting of the Wakefield, Pontefract, and Castleford Division was held at the Great Bull Restaurant, Wakefield, on October 6th, when Dr H. SCHOLEFIELD was in the chair. The Chairman referred sympathetically to the illness of Dr Gibson, and with pride to Dr Hillman's recent election as Mayor of Wakefield for the coming year.

Dr H. CHARLES CAMEROY then gave a British Medical Association Lecture on emuresis and the nervous child. This proved to be one of the very best lectures that the Division has had. It was good fortune to hear it. It was given in a delightfully charming manner, and was a masterly description of the nervous, introspective, anatomic vivacious child. The lecturer dealt with the matter under three headings: (1) scrutiny of the management of the child; (2) the state of its metabolism; (3) its physique. He considered that the nervous disturbances in children were in most cases due to an unstable metabolism—a ketonæmia—or low grade ketosis, as evinced by sweet smelling breath and ending in a bilious attack. The child was in a state of hypoglycæmia and half anesthetized, often waking in the night in this condition. Dr Cameron suggested sugar, preferably in the form of glucose (3 drachms of powdered glucose in a wineglassful of water, flavoured with fruit juice, four times a day). The further factors in treatment he considered to be restoration of confidence, suggestion (wearing of a horse made belt, consisting of a pad of ray substance such as salt or bismuth) and lying on a pad of sphagnum moss for the three purposes of suggestion, absorption and deodorization. In his opinion the public school dormitory was the very worst place for the pathological bedwetting child. He emphasized the fact that a child suffering from emuresis was as anxious about it as the parents and that this anxiety was one of the main factors in prolonging the condition. With regard to prognosis he was not optimistic.

Dr SCHOLEFIELD, STEVEN, and HILLMAN contributed to the subsequent discussion and on the motion of Dr WALKER, seconded by Dr DUFF, the lecturer was thanked for his address.

### YORKSHIRE BRANCH YORK DIVISION

A meeting of the York Division was held in the York Medical Society's Room on September 30th, when Dr G. W. GOSTLING was in the chair.

The HONORARY SECRETARY stated that he had been asked to read a paper at the Secretaries' Conference at the Annual Representative Meeting on the organization of an urban Division. With reference to police calls in the West Riding area he said that he instructed he had written to the Chief Constable accepting the suggested scale of fees and asking that mileage be paid at the rate of 1s. a mile each way over two miles, to this the Chief Constable had agreed. He had also inquired as to the ambulance expenses the Chief Constable had replied stating that the police were rarely called upon to pay these charges. After discussion it was decided to take no further action as regards the latter question.

Dr W. A. LVELLY (Charities Secretary of the Division) reported on the result of his appeal to members on behalf of medical charities. Several members expressed dissatisfaction with the result of the appeal and Dr Taylor suggested that a personal appeal to every individual practitioner might produce a better result. This idea was welcomed by the meeting and Dr Taylor promised to undertake it himself for one year. The HONORARY SECRETARY suggested that an endeavour should be made to persuade members to subscribe by means of bankers' order.

The HONORARY SECRETARY read correspondence between himself and Dr Haydock (medical officer to Messrs Rowntree and Co.) and the Medical Secretary with regard to a proposal that Messrs Rowntree's medical officer should attend such of their employees between the ages of 14 and 16 as seemed to require it in their own homes. After discussion it was unanimously agreed to refer the matter to the Executive Committee to enquire the feasibility of a scheme proposed by Dr Reynolds or any alternative proposed by Dr PETER MACDONALD on behalf of the Division expressed approval of Dr Haydock's action in approaching the Division on the matter.

WILKESDEN GENERAL HOSPITAL Harlesden Road NW 10—Physician in charge of Department for Diseases of the Skin  
WOLVERHAMPTON AND STAFFORDSHIRE HOSPITAL—Fracture and Orthopaedic Surgeon

CERTIFYING FACTORY SURGEON—The appointment at Snodland (Kent) is vacant. Applications to the Chief Inspector of Factories, Home Office, Whitehall S.W.1.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

## APPOINTMENTS

BAIRD Dugald, M.B., Ch.B. Glas., Assistant Gynaecologist, Glasgow Royal Infirmary  
INGRAM J. T., M.D. Lond., Honorary Physician to the Dermatological Department, Leeds General Infirmary  
GORDON A. Knysvelt, M.B., B.Ch. Cantab., Honorary Consulting Pathologist, Victoria Hospital, Swindon  
McMILLAN, Duncan, M.D. Ed., Junior Assistant Physician at Crichton Royal Mental Hospital, Dumfries  
MOORE D. L. H. M.B., B.Ch. B.A.O. Dub., Certifying Factory Surgeon for the Exmouth District, co. Devon

## DIARY OF SOCIETIES AND LECTURES

ROYAL SOCIETY OF MEDICINE  
Section of Odontology—Mon 8 p.m. Presidential Address by Mr. W. Rushton. Mr. F. A. Doubleday, Chronic Furunculosis of the Periodontal Membrane and its Treatment  
Section of Medicine—Tues 5 p.m. Dr. Vincent Lyon (Philadelphia) The Technique and Usefulness of Medical Biliary Drainage in Gall Tract Disease (illustrated by lantern slides and cinematograph film)  
Section of Comparative Medicine—Wed 5 p.m. Professor O. Charnock Bradley, What is Comparative Medicine?  
Section of Urology—Thurs 8.30 p.m. Presidential Address by Mr. Frank Kidd. Purpura of the Urinary Tract  
Section of Disease in Children—Fri, 4.30 p.m. Cases  
Section of Epidemiology—Fri, 8 p.m., Dr. E. W. Goodall, The Epidemic Constitution  
MEDICAL SOCIETY OF LONDON 11 Chandos Street W.1—Mon 8.30 p.m. Discussion: The Development of the Duodenal Tube and its Practical Value in Diagnosis and Treatment. To be opened by Dr. B. B. Vincent Lyon (Philadelphia)  
MEDICO-LEGAL SOCIETY 11 Chandos Street W.1—Thurs 8.30 p.m. Presidential Address by Sir W. H. Wilcock K.C.I.E., C.B. Recent Advances in Toxicology and Forensic Medicine

## ANNUAL PANEL CONFERENCE

### NEW DISCIPLINARY MACHINERY APPROVED

*Thursday October 20th 1927*

THE Annual Conference of representatives of Local Medical and Panel Committees was held on Thursday October 20th in the Great Hall of the British Medical Association House, Tavistock Square, London. There was a very large attendance, practically all the insurance areas in England and Wales were represented and only a few of the remote Scottish areas were without a representative. The chair was occupied by Dr L. K. LE FLEMING of Wimborne Dorset who, in the course of the proceedings, was again unanimously elected Chairman of the Conference for another year. He was supported by Dr H. G. DAM, Chairman of the Insurance Acts Committee. The consideration of the report of the Committee (STILEMENT, *British Medical Journal* August 26th 1927) took almost the whole of the day. It was described by Dr DAM as one of the most important reports in a domestic sense, ever issued since the Committee was formed.

At the outset the Conference, by standing in silence for a few moments signified its sorrow at the death of Dr T. RIDLEY BAILEY, for many years the directly elected representative of the Staffordshire and Shropshire group of insurance areas upon the Insurance Acts Committee.

#### *Constitution of Insurance Acts Committee*

##### *Re-constitution of the Committee*

Dr DAM explained that after prolonged consideration the Committee, obeying last year's instruction to consider the grouping of Panel Committees for election of direct representatives to the Insurance Acts Committee, had found that the existing arrangement could not suitably be modified even with the suggested addition of two other members. At present there was one representative on the Committee to between 850 and 1,000 insurance practitioners. To make Wales a separate entity by sharing off Cheshire leaving Wales with the two members for itself would mean that in Wales there was one member to 650 practitioners and to introduce Cheshire into the scheme of English groups would mean a very large regrouping.

Dr L. J. PICTON (Cheshire) explained that as it was bracketed with Wales, Cheshire was scarcely likely ever to have a member. The Welsh Committee naturally preferring to have two Welsh members especially in view of the differences in insurance administration between Wales and England. But it was hard on Cheshire to be perpetually disfranchised. Cheshire was content to be grouped with any set of English counties. It was for a time grouped with Lancashire and if that was not again feasible it was willing to form part of a group consisting of Staffordshire, Shropshire and perhaps Derbyshire. He moved that Wales should have separate representation in the scheme or grouping as already it had in fact.

Dr DAM said that he could see that Wales was better taken as a separate entity and if that was the desire of the Conference he was prepared to ask the Committee to consider the most equitable scheme for fitting in Cheshire with some English constituencies.

The Conference agreed to this arrangement.

#### **DISCIPLINARY PROCEDURE**

The Conference then came to the principal subject on the day's agenda on a motion to approve the portion of the Insurance Act Committee's report relating to the proposed new disciplinary procedure.

Dr DAM said that the Committee was putting forward a scheme which while it was not ideal, did provide he thought for most of the difficulties which had been experienced in relation to the question of discipline. In this matter the Committee had been negotiating with the Ministry, both sides had made suggestions, and the scheme was the result of prolonged discussion. In considering any disciplinary machinery it must be remembered that if only comparatively small numbers or persons were employed there should be no need for such machinery at all but where there were many thousands of members of a profession scattered all over the country, taking part under contract in a service, it became necessary to establish certain rules under which that service could be

carried out. If the ordinary conditions of employment were available, whereby the heads of the service themselves could choose and dismiss those employed under it, the need for such machinery again would not arise, and regulations in that event need only be very few. But which the national insurance scheme was started the profession obtained the right of any practitioner to go on the panel if he wished, and Insurance Committees in taking practitioners on the panel were left without choice, while a practitioner could only be removed from the panel after a prolonged and difficult procedure. This privilege meant that the profession had to accept certain disciplinary arrangements. If a practitioner could be engaged and dismissed at will the ordinary courts of the land would be sufficient to deal with breaches of contract or irregularities.

As matters stood (Dr. Dun continued) the question of discipline could be dealt with in one of two ways: either, by agreement with the Ministry, inside the scheme, or, again by agreement with the Ministry, outside the scheme—that was to say, through the ordinary courts, and he understood, from conversations with the Ministry, that if the profession was strongly in favour of the latter method the Ministry would offer no serious objection. That would get rid of the agitating question of a final appeal from the decision of the Minister. But if a doctor who broke his insurance contract was to be sued in the county court or other court of law, with the possibility of appeal up to the House of Lords, it would mean publicity in all cases in which the action of a doctor was called in question. On the other hand, if the disciplinary machinery was to be kept inside the service, the Minister said—and the speaker sympathized with his position—that his final decision ought to be accepted and that he could not consent to a liability to appeal before a court to defend his decision, though, of course, the Minister could not prevent an appeal on the score of any irregularity of procedure, or that his decision was *ultra vires*.

The Committee then set itself to consider what were the disadvantages which experience showed to exist under the present scheme. The hearing of complaints by Medical Service Subcommittees and the action taken thereon by Insurance Committees was well understood, but from this stage to the promulgation of the Minister's decision there was a gap, and with regard to what took place during these intervening stages the profession had little knowledge and no control. When the scheme was initiated the superior body was not the Minister of Health but the Insurance Commissioners, and representations by Insurance Committees were dealt with by that body, whose members were known, and whom the profession was content to accept. But with the advent of the Minister of Health, who had many other duties besides this, it was obvious that he must delegate his responsibilities with regard to a decision on disciplinary cases in National Insurance, and the profession had no official knowledge of the manner in which that delegation was done. He hoped it would be found that the scheme put forward that day provided for the bridging of that gap. It provided for the association of the medical profession with the machinery from the beginning right up to the final recommendation to the Minister. The duty of the representatives of the profession at the various stages of the proceeding would be to see that fair play was done. The scheme provided for what Mr. Lloyd George said originally that the profession would get—the judgement of the doctor by his peers. In no case would the civil service be able to deal with disciplinary decisions without the advice of a representative of the profession in practice.

The difficulty in securing this modification had been the administrative one, but Sir Arthur Robinson, the First Secretary of the Ministry, had said in effect, "I can quite see that under the existing machinery we may be setting up a standard of medical ethics or behaviour or medical treatment of which you have no knowledge and of which you might disapprove. On those grounds we are prepared to concede that the doctors who are working the service should have the right to be concerned in the consideration of all cases in which there is a medical issue." That did not include all cases of complaint. It definitely left aside those cases in which there was no professional issue—namely, the charging of fees and the wrongful issue of

certificates, is to dates, for instance—though if the complaint with regard to a certificate involved any professional question it would be considered under these new arrangements also.

Dr. Dun then sketched the new procedure which would follow a complaint. The time limit in the Regulations for making a complaint had been in certain cases practically disregarded. If an Insurance Committee should have an officer hostile to the medical service—and unfortunately there were such committees and such officers—it was likely that a complaint would be admitted after practically any lapse of time. But it had now been finally agreed that if a complaint was made after the period of six weeks it might, with the approval of the Medical Service Subcommittee, be heard within two months, but after two months it could not be heard at all except with the consent of the Minister, and to obtain such consent the subcommittee or the complaining party would have to satisfy the Minister that there had been reasonable grounds for delay, and the practitioner would also be given the same opportunity of making representations against an extension of the time. That, he thought, safeguarded the position in regard to a time limit for complaints. There were risks, again, in which a complaint was couched in indefinite terms, and if during the hearing any fresh cause of complaint was discovered it was proceeded with. The Ministry had now agreed to inform Insurance Committees that complaints should be as specifically stated as possible. There might be some disappointment that this was not made a definite regulation, but it was not advisable to press to have it made absolute, for this would mean that in most cases it would be necessary for the clerk of the Insurance Committee to hear by himself the person or society complaining, and he would thus be enabled, if he was so inclined, to put leading questions, which might result in more serious charges. Again, the position of the clerk of the Insurance Committee at the hearing itself had been considered. There were clerks who thought it their business to act as a sort of prosecuting counsel against the doctor. That was an entirely irregular procedure, but it could only happen with the consent of the doctors who were sitting on the Medical Service Subcommittee, and if they were not prepared to prevent clerks taking up that attitude it could not be brought about by regulation. There was one set of circumstances in which the clerk might consider himself entitled to act in that way—namely, when the complaint was put forward by the Medical Benefit Subcommittee or the Insurance Committee itself. It had been agreed with the Ministry that Insurance Committees should be informed that the appearance of their clerk as "counsel" was not satisfactory, and that the clerk should act only in certain ways as laid down. Again, it had been found in certain cases that clerks submitted to the Insurance Committee the reports of Medical Service Subcommittee proceedings which the subcommittee had not properly considered. This was an unbusinesslike proceeding, but, as in the other matter just mentioned, it could only happen with the consent of the medical members of the subcommittee. In the speaker's own recent reports were first submitted to all members of the subcommittee present, and if they disapproved in any respect the report had to be reconsidered before it was presented to the full committee. It was proposed now that the best shorthand notes available should be taken as the basis of the preparation of the reports, and that the report must be agreed to by the subcommittee itself.

With regard to the powers of Insurance Committees, these committees under present Regulations could do only four things on a Medical Service Subcommittee's recommendation: they could remove patients from the doctor's list, limit his list, recommend to the Ministry that a name be deducted, or recommend that the doctor be taken off the panel. It was now proposed that in addition they should have the power of censuring the doctor. In many instances the case might finish there, instead of a recommendation that money be withheld. If the recommendation went further the papers were sent to the Ministry, and the practitioner was advised of the findings of the Insurance Committee, was furnished with the report of the subcommittee, and was informed that he might appeal if he

the finding within a given period. If he appealed the appeal had hitherto been heard by one or two officers of the Ministry, in agreement had now been obtained from the Ministry that in future a doctor nominated by the profession should be associated with the officers of the Ministry who heard the appeal. The appeal was not a rehearing, it was an appeal for reconsideration on the evidence already given, and it was not open to either party on an appeal to introduce new evidence relating to the case. If a practitioner did not appeal within the given time he was informed that the Minister was considering the report of the committee, and was asked if he desired to make oral or written representations. If he desired to make representations by word at a meeting in the office of officers of the Ministry attended for this purpose, and it had been arranged that when such representations were made a doctor, again nominated by the profession, should be present.

The case then went to the Minister for consideration as to what should be done, and this was where the new body would function. All cases in which there was a protest would be referred to a joint Advisory Committee consisting of the Chief Medical Officer and two other officers of the Ministry and three medical men chosen from a panel which was nominated by the profession itself. That committee of six would consider the report of the Medical Service Subcommittee and of the Insurance Committee, the representations of the practitioner, and the findings of the appeal tribunal, and would advise the Minister as to what action should be taken. The Minister had then to promulgate his decree. Of course he was not compelled to accept the finding of this committee, though as a matter of practice and business it would be found that he inevitably did so. It did not then the scheme had failed and some other method must be devised. With regard to cases heard by a committee of inquiry where the representation was that the practitioner should be removed from the panel it had been stated that the functions of that committee were improperly curtailed and that it had no power to hear certain evidence. He wanted to make it plain that that committee was in a position to hear any evidence it considered proper to the particular charge. If a doctor was charged with a specific breach—that for instance on a certain occasion he did not visit a particular patient—and it had been admitted as evidence that he was in the habit of not visiting his patients regularly, such improper admission of evidence would be a ground of appeal as it would in a similar case in the courts of the land, but if the charge was a general one—such as that he was repeatedly intoxicated—it would be quite proper to hear evidence as to general character. The committee of inquiry advised the Minister as to the facts found and the inferences to be drawn from those facts. There had been cases in the past in which the evidence had not been considered to be sufficiently conclusive to justify a man being taken from the panel but he had been found at fault, and the Minister had decided to withhold money. Last year partly as a result of the recommendation of the Royal Commission, it was agreed that where the Minister did not decide to take a man off the panel he should not proceed to a less penalty without rehearing the case. The Minister intended that the reports of committees of inquiry should go to the joint Advisory Committee to consider whether there should be removal from the panel or not so that even apart from a minor penalty, on the major question the machinery of the joint Advisory Committee would be used.

If this new procedure were approved the Insurance Acts Committee would suggest that for a certain period of years the profession should forego the claim to have an appeal to the courts. The Committee felt that if a scheme was devised which seemed fair and just from beginning to end it should have a sufficient trial and that any question of appeal to the courts on which the Conference had voted last year should in the meantime be held over.

There were a number of minor points in the scheme which might be mentioned, especially with regard to safeguarding the procedure on initiation of complaints and as to the person who might so initiate them. The Minister's powers also in initiating complaints were limited to cases concerning the keeping of records and medical reports.

With regard to the joint Advisory Committee, its proceedings would take place in private but of course it would be the duty of the members of that committee which were nominated by the profession to see that nothing took place which might be unfair to the man against whom the charge had been laid. The committee would refuse to admit any fresh evidence of any sort for or against the doctor. If the representatives of the profession on the committee found that in practice things were happening at that stage of the proceedings of which they disapproved their course would be to come back to the Insurance Acts Committee which had nominated them, and intimate their recommendation. It would then be known that the scheme now put forward had proved unsatisfactory, and that some other solution must be sought. But if proper representatives were selected and if the committee functioned in the way which was reasonably to be expected, the profession would get all that it required in the way of safeguards and the disciplinary machinery would at last be placed upon a satisfactory footing. (Applause)

#### *The Right of Appeal to the High Court*

Dr F R TUNTON (Wolverhampton) said that his Panel Committee was entirely satisfied with the proposed arrangements and safeguards but a strong opinion was expressed that the right of appeal to the High Court against decisions of the Minister should remain. The Minister was not in a position of a judge who had to act upon the finding of a jury, he would have a joint Advisory Committee but he could override its recommendations. Such a thing might be said to be most unlikely, but, after all there was nothing to prevent it.

Dr L J PICTON (Cresline) pleaded that the decision of last year's Conference to the effect that there should be an appeal to the court in certain cases be reaffirmed. Time after time the Minister of Health had told the profession that legally and constitutionally it was quite impossible for such right of appeal to be conceded but now the Minister admitted that an appeal was perfectly possible. Either insurance practitioners were State servants or they were not. If they were not State servants they enjoyed the ordinary privileges or citizenship including the right to have their appeals heard by the courts. To his mind there was no essential difference between the practitioner's contract with the Insurance Committee and a builder's contract with the county council. In the latter case in the event of a dispute matters went to arbitration but there was usually a provision in the arbitration procedure admitting the right to appeal. The machinery which Dr Dain had just described might be regarded as arbitration machinery and added to that machinery there should be the right of appeal to the courts from the Minister's final decision. Such appeal would very rarely be made but the fact that it was there would be the greatest possible safeguard against the abuses which the profession feared and of which in the past it had had experience—namely those following from the sitting aside by the Minister of the decisions of the people who openly had been admitted to advise him and his acceptance of the advice of other people whose identity was unknown to the profession or the public. The publicity of the local court had been dreaded but there was no need for these matters to go through the local court. The builder's contract did not go through that court. Dr Dain had said that if the scheme went wrong the medical members of this joint Advisory Committee would resign and yet he had also said that this scheme must be given a number of years' trial. In that case what was the point of resigning?

Dr H S BEADLES (West Ham) thought that the Insurance Acts Committee—or the subcommittee which had conducted the negotiations—was to be heartily congratulated upon what it had attained. To very large numbers of insurance practitioners it would seem wholly satisfactory but there were the others who still wanted to have possible resort to legal tribunals. He thought it a mistake to propose that the scheme be unaltered for three years.

Dr A FOSTER (Worcester) pointed out that judges were continually complaining about the increasing powers of

Government departments Lord Haldane some years ago appointed a committee to go into this subject, but so great was the opposition from the departments themselves that the subjects of the inquiry were greatly reduced and a very minor report, embodied in a bill now before Parliament, was forthcoming. If the judges could not beat the Government departments, how was the profession to get into the courts? At the present moment it did not seem possible to go beyond the department, which declared itself responsible to Parliament. In a few years' time it might be possible to do more, but for the present he thought the course suggested by the Insurance Acts Committee was the best.

Dr DUN desired to make the position of the Insurance Acts Committee quite clear. On the instructions of the Conference last year the Committee had explored with the Ministry certain procedure. As a result it brought forward the present scheme. The Conference also passed other resolutions, of which that referred to by Dr PICTON was one. But he asked the Conference to accept the scheme he had explained, without reaffirming any claim to appeal to the courts. He did this because he believed that a great improvement in the present machinery had been obtained ("Heu, heu"). It would be extremely difficult to get an appeal allowed on the merits of the case, at any rate until the judiciary had made the position of the courts more powerful as against administrative departments. He did not want the Conference to pass a resolution which stood in the name of Wolverhampton, to demand the right of appeal to the High Court, on the other hand, he did not want it negatively, because if, after a period of trial, this scheme should prove unsatisfactory, it would be awkward for the Conference to reverse a previous decision of this kind. Let matters be left as they were for three years.

Dr TURTON, on behalf of Wolverhampton, withdrew his resolution which demanded the right of appeal to the High Court.

Dr PICTON still desired the Conference to reaffirm its decision of last year, that there should be an appeal to the Court in the following cases: (1) irregular proceedings, (2) alleged vindictive penalty, and (3) when a common law action by the patient would normally lie, and that the question of appeal in other cases be referred to the Insurance Acts Committee. It was vital to maintain this right if the distinction between a State service and a service of medical citizens was to mean anything at all.

The CHAIRMAN thought the feeling of the Conference was with Dr DUN in saying that now was not the time either to reaffirm or to deny the view of the profession that there should be access to the courts (Applause). If that was the sense of the Conference he assumed that Dr PICTON would be willing to have this resolution withdrawn in the same way as that of Wolverhampton.

Dr PICTON bowed to the feeling of the Conference, and withdrew the resolution he had tabled on the subject.

#### *Criticisms of the Scheme*

Dr GORDON WARD (Kent) thought the proposed procedure open to certain objections. It left the question as to guilt and penalty in inquiry cases with persons who had not heard the evidence, and it permitted evidence to be brought against a practitioner or an Insurance Committee of which neither party was made aware. The position as to discipline was not the same as last year. Owing to arrangements with the chemists, the chances of a practitioner falling a victim to the disciplinary procedure were greater than before. Moreover, the profession had to contemplate the likelihood of a Government coming into power which would introduce reform by administrative action. There was the more need for care, therefore, in all disciplinary procedures. Dr DUN had said that the Minister must obviously delegate his duties in regard to a decision or disciplinary matters. This was not true. The famous case of the £1,000 fine was one in which the Minister did not delegate. It was open to a Minister to turn down his department. Again, the Insurance Acts Committee was apparently content that the judgement should be given by persons (the joint Advisory Committee) who had not heard the evidence or seen the witnesses, and had only written evidence before them. If the Minister

must delegate his powers, he could surely delegate them to a judicial body, which the joint Advisory Committee was not. Dr DUN had said that the medical members of that committee could resign if anything happened at which they did not approve. But how were they to be appointed? A list was to be nominated from which the Minister would make the selection—but not by rotation, he would not pick any whom he did not want. Dr DUN had said that the new committee would hear no fresh evidence. But the old committee which intervened between the Inquiry Committee and the Minister did hear fresh evidence, and the Conference was told, for the first time that morning, that that was not to happen in future. This meant, he presumed, that evidence of character would not be admitted. He saw no reason why, apart from the confirming power of the Minister, the proceedings should not be undertaken by the Inquiry Committee, which heard the evidence and saw the witnesses. The proposal that the state of affairs now set out should remain unquestioned for several years also seemed to him unwise.

Dr BRACKENBURY wished to draw the attention of the Conference to two big things which had been secured by this proposed arrangement, and which he hoped, without any substantial amendment, would be accepted, not as a makeshift which was sure to fail, but as a successful working scheme. Up to the present moment there had been a period in these disciplinary proceedings in which the profession had been in the dark. So far as the Medical Service Subcommittee and the Insurance Committee were concerned, the profession knew what was going on and had its representatives present, but from that time onwards until the decision was promulgated the profession did not know what was proceeding. By this new machinery, however, representatives of the profession would be present throughout, and what went on in the Ministry would be as well known to representatives of the profession as what went on before the case reached the Ministry. The second gain was even greater. The medical profession would not tolerate professional matters being decided by those who were not members of the profession, and under the existing arrangement there was the possibility, at any rate, of civil servants coming in and passing judgement upon the way in which professional work was done, whether a certain treatment should have been adopted, and so forth. Under this new arrangement, however, it had been secured that a purely professional tribunal should judge upon these matters. Having secured these two things, he hoped that the profession would accept the arrangement and endeavour to make it work.

Dr DUN said that Dr WARD's statements were extremely inaccurate. He had said, "It [the new arrangement] leaves the question as to guilt and penalty in inquiry cases with persons who have not heard the evidence." It did nothing of the sort. The "guilt" was decided by the Medical Service Subcommittee or the Committee of Inquiry in every case. He had further said, "It permits evidence to be brought against a practitioner or an Insurance Committee of which neither party is made aware." That was exactly what it did not do. The whole object of the joint Advisory Committee was to prevent the possibility of that being done. If, as the scheme provided, representatives of the profession were there to see that that was not done the efficiency of the scheme must depend upon those representatives.

Dr PICTON pointed out that Dr Brackenbury had just stated that he did not wish professional matters to be judged by civil servants, who were lay people, nevertheless, last year Dr Brackenbury was responsible for forming the resolution, which the Conference carried, involving the submission of questions regarding the quality of treatment to the ordinary courts. Dr PICTON was anxious that the decision of the Conference, properly taken last year, should not be reversed, altered, or vitiated.

Dr GORDON WARD said that Dr Brackenbury had used a phrase suggesting that the profession had now seemed light in darkness. But had not Dr DUN said that the members of the joint Advisory Committee would not be at liberty to divulge what took place there? And though they were nominated by the profession, it was not the profession which chose them.

A resolution by Dr. Cardon Ward objecting to the proposed disciplinary procedure on the grounds he had outlined in his speech received a very little support in the Conference and was overwhelmingly rejected.

Dr. H. J. CARDWILE (London) moved:

That the panel of practitioners from which it is proposed to select a disciplinary committee to sit in the Ministry of Health shall be drawn by lot annually by the Insurance Acts Committee and be submitted to the Annual Conference for confirmation or amendment.

Dr. DAVIS thought that the executive might be entrusted with the duty of choosing these members which was an undesirable one for a large Conference. It was of fundamental importance that the selection should be strong and impartially minded. It might not be expedient for the Committee to take place annually. He would suggest a three years' appointment with the possibility of renewal.

Dr. CARDWILE withdrew his motion.

#### Model Rules of Insurance

Dr. DAVIS said that some of the matters relating to the Insurance, although of fundamental importance to the practitioners, could not well be dealt with in the Regulations but they should as far as possible be embodied in the Model Rules of Procedure of Service Subcommittee. They were as follows:

- (1) That the charges should be pecuniarily laid.
- (2) That the clerk should not act as the solicitor or advocate for the Committee.
- (3) That the Service Subcommittee reports should be prepared by shorthand notes and be submitted for approval to the panel at the hearing.
- (4) That the fact that the finding of a Service Subcommittee which is considered by the medical member present to be correct on a question purely professional has been taken as an advisory to their unanimous advice should be recorded.
- (5) That the recommendations of the Subcommittee should be embodied in the naming of a monetary fine if any a suggestion in paragraph 17 (xx) of the Insurance Acts Committee Annual Report.

He brought forward this as a resolution.

Dr. F. BRUCE (Brighton) moved in amendment that the Insurance Acts Committee should be instructed to prepare the reduction of the matters above set out in the Rules of Procedure or that in some other manner they should be made obligatory. Dr. R. R. LUTHER (London) seconded.

Dr. DAVIS pointed out that one of these things could not be made obligatory.

Dr. BRUCE still thought that the Committee might "grip" up the Ministry and he said that the Ministry was not willing to accept of recognition and thus or that might be induced to lay it down as a definite instruction. The Brighton amendment was lost and a further amendment by Dr. J. HOLMES (Bury) was also lost. The all-England medical union given before the Medical Service Subcommittee should be of such a nature as to withdraw its understanding that the Insurance Acts Committee would look into the question why a statement of the oath was not obtainable in England although it was in Scotland.

The motion of the Insurance Acts Committee that the matters specified be embodied in model rules of procedure was then adopted.

#### Procedure in Inquiries and Appeals

Dr. CARDWILE (London) moved to oppose an appeal procedure suggested as one alternative in the Insurance Acts Committee's report—namely to allow an appeal in examination to be heard at the end of the hearing of the appeal. He considered that this would preclude a practitioner from any further opportunity, where an appeal was decided against him, of making oral representations to the Ministry in mitigation of penalty.

Dr. DAVIS said that at a discussion with officials of the Ministry and also with the solicitor to the British Medical Association it appeared that the procedure to which Dr. Cardwile objected was frequently followed already and the legal view was that it did not prejudice the appellant. On balance it was better that anything to be urged in mitigation should be so urged at the end of the appeal rather than that the appellant should be put to the trouble of having to appear for this purpose on a subsequent occasion. If the Conference desired it there was no reason why either method should not be available.

Dr. CARDWILE expressed his astonishment at hearing that

a solicitor approved a plea for extension being made before a court which had not yet found a man guilty.

His motion, however, was lost. A motion by East Smith suggesting that with a view to eliminating trivial cases the chairman of the Medical Service Subcommittee should consult the chairman of the Local Medical Committee before a charge was definitely formulated was withdrawn. Dr. DAVIS urged that the present proposals seemed likely to work satisfactorily without this addition. Dr. CARDWILE also proposed that any additional issue raised at the hearing at a complaint before the Medical Service Subcommittee should not be admitted but should form the subject of fresh charges. No doubt in a number of these cases no such change would be formulated at all. Dr. DAVIS thought that the acceptance of this amendment would give a new charge being dealt with even though the doctor himself wished there and then to rebut it. Dr. CARDWILE pointed out that many medical men when called upon to defend themselves had little idea how to proceed and the necessity ought not to be placed upon them of deciding on the spot of the moment whether they should lift the new charge immediately to be met. This amendment was also lost.

Dr. CARDWILE had a further amendment seeking to limit the functions of clerks to Insurance Committees in respect of all cases investigated by the Medical Service Subcommittee but Dr. DAVIS thought the procedure laid down in the proposals of the Insurance Acts Committee was a sufficient safeguard and he said that the medical members of the Medical Service Subcommittee must be trusted to do their part in preventing any usurpation of the role of prosecutor by the clerk. The amendment was lost.

#### The Motion of the Insurance Acts Committee

Dr. CARDON WARD (Kent) in bringing forward a motion that no decision on disciplinary procedure should be finally agreed by the Insurance Acts Committee without reference to the Panel Conference protested against such statements in the report of the Committee as that "The Committee has accepted these statements of the Minister as equitable." It had no business to accept them. The Insurance Acts Committee weakened itself by not keeping in closer touch with the Conference. But there was a more serious matter. Some time ago he was representing his Panel Committee in the matter of a claim that a certain service—treatment by carbon dioxide—was not out of the range of medical benefit and the medical witness against his claim was an eminent member of the Insurance Acts Committee. He was extremely wise that any member of the negotiating body should put him in a position in obligation to the Ministry of giving evidence. It was true the Committee could decide how many members of the Insurance Acts Committee were paid by the Ministry and how it might be that a panel member (found one) withdrew.

Dr. DAVIS said that Dr. Gordon Ward had been even more offensive than he had ever known him (found applicant). He had used the members of the Insurance Acts Committee were paid by the Ministry. It was a false and most offensive accusation. If a medical man who happened to be a member of the Committee was called upon to give evidence on a matter on which he had some knowledge he did so as a private individual and entirely on his own responsibility. The speaker only resented the reputation that the Insurance Acts Committee was in the pocket of the Ministry.

A REPRESENTATIVE asked that the Conference should rest upon a withdrawal by Dr. Ward of his false statements.

Dr. Ward who is again greeted by cries of "Withdraw!" said that he would like to put a list of payments received by members of the Insurance Acts Committee from the Ministry. He thought it a pity that a very prominent member of the Committee should have given evidence against his (the speaker's) Panel Committee and have allowed himself to be misled in that manner.

Dr. BRUCE said it was clear to him that Dr. Ward had a particular incident in mind. There was an inquiry in which Kent was concerned as to whether a certain service was within or not within the contract. He (the speaker) gave evidence at that inquiry. He was not

paid one halfpenny—and he never supposed that he should be paid one halfpenny—directly or indirectly for giving that evidence (Applause)

Dr WARD Of course it is not an unnatural assumption I made, that services of that sort were paid for

A REPRESENTATIVE Not an unnatural assumption for Dr Gordon Ward!

Dr WARD The services ought to be paid for. But so far as any question of payment is concerned I absolutely withdraw what I said. At the same time it is not desirable that, paid or unpaid, a prominent member like Dr Brackenbury should turn up at the Ministry and oppose a Panel Committee.

The motion which Dr Ward had moved, that no decision on disciplinary procedure should be finally agreed without reference to the Panel Conference, was accepted by Dr Dain as being, in effect, what the Committee always had in view, and what it was doing at the present meeting.

The general motion approving the modifications in disciplinary procedure brought forward by the Committee was then carried, and it was further agreed that the Regulations when revised, and in the absence of factors of importance, should not be altered for a period of three years.

#### *The Position in Scotland*

Dr DAIN stated that the Scottish Board of Health had agreed to set up an Advisory Committee, as in England, and to adopt the same procedure, adopting also the suggestions as to the work of Medical Service Subcommittees—with the exception of that relating to the position of the Insurance Committee clerk in medical service cases—and the Insurance Acts Subcommittee for Scotland, after discussion with the Board of Health, had agreed not to press for this. The Board was unable to agree to the deletion of the words "or otherwise" in Regulation 36, which gives the Minister power to withhold money if he is satisfied, "whether on consideration of the report of a Medical Service Subcommittee or Joint Services Subcommittee or otherwise, that a practitioner has failed or neglected to comply with the terms of service", but it had agreed to prepare an amending regulation so as to provide that in such cases procedure at least comparable to that of the Medical Service Subcommittee would be followed. The Board also desired to retain the power to order an inquiry in the absence of a formal representation, and in view of the special circumstances in Scotland this had been agreed. All the other proposed changes were agreed to, and the fourteen days' notice of change of doctor would come into operation at the beginning of next year.

#### *NATIONAL INSURANCE DEFENCE TRUST*

Dr DAIN, speaking as chairman of the trustees of the National Insurance Defence Fund, said that the fund now exceeded £120,000, nearly half-way towards the quarter-of-a-million goal. The income from subscriptions had increased during the year, but the inequality of the contributions in relation to areas gave the trustees some anxiety. Such inequality might cause serious differences of opinion should circumstances arise which made it necessary to distribute moneys from the fund. The fund had received, for some years now, satisfactory support from the great majority of the committees, but a few committees had subscribed nothing, and others were far below their quota. He thought it was time that every committee should be informed that by this year at least 10 per cent of the quota should have been paid in, and by next year 20 per cent. He read out the names of those committees whose actual payments so far represented less than 10 per cent of the quota for their areas. They included one committee whose representative had been prominent in "gingering" the Executive, but this committee, apparently, while prepared to use the means of negotiation which the Conference and the Insurance Acts Committee provided, was not prepared to pay its share to a defence fund. Its payment at present stood at 7 per cent of its quota, and other committees showed an even smaller figure. On the other hand, some committees—Devonshire, Northamptonshire, York, Southport, Haddington, and Lancashire—had already paid 100 per cent of their full quota, and very many others were not far behind.

Dr Gordon Ward agreed that the contribution of Kent to the fund was lamentably small ("Hear, hear") The

Kent Committee had thought of increasing its contribution, but first it would like to know one or two things about the fund. A body of trustees must be extremely careful on technical procedure, and he noticed that from the fund a loan of £6,500 had been made to the British Medical Association. It looked bad, on paper, to have this loan without security. Again, it was proposed to use part of the fund for the support of members of Parliament, but the trend of the law undoubtedly was to make it obligatory to divorce political funds from funds used for other purposes.

Dr DAIN said that the first object of the Trust was "to assist in defraying the expenses incurred in organizing or taking any action to protect the interests of the medical profession in connexion with the present National Health Insurance system or any extension or modification thereof." When these words were drafted the trustees were advised by their lawyer that they were sufficiently wide to cover any action they might wish to take, including action with a view to securing representation in Parliament of the interests of insurance practitioners. The solicitor had again been consulted, and his opinion was that the words just quoted made the trustees perfectly free to use the money in support of parliamentary candidates. With regard to the loan to the British Medical Association, this was purely a banking matter, current rates of interest were paid, and the loan was repayable at short notice on either side. He left it to the Conference to consider how far the trustees would have been justified in incurring the expense of drawing up documents conveying securities in the case of an arrangement of this kind ("Hear, hear")

A motion by Kent that the use of the fund for such political purposes as the support of members of Parliament was not clearly contemplated, and should not be sanctioned until approved by the highest legal opinion, was lost.

Dr H. S. BEADLES (West Ham) moved

That this Conference disapproves of the action of the trustees in allocating £1,000 to the Medical Representation in Parliament Fund of the British Medical Association.

Speaking for a committee which supported the defence fund from the beginning, he said that the legal powers of the trustees in this respect were sufficiently wide, but there was a moral obligation. The trustees had taken a new depositum in the way they suggested using this money, and before they so used it they should have come to the Conference. When this fund was formed those who had to persuade their constituents to contribute used the argument that a solid capital sum was required, and that it should be drawn upon only for administrative purposes. It was true that the £1,000 allocated to the Representation in Parliament Fund was not a large sum, but it was only the beginning of the use of this money for political purposes. It was stated in the Annual Report of the Insurance Acts Committee that this allocation was being made to a non-party fund. That he strongly denied. The Parliamentary fund of the British Medical Association could be used for the support of a Conservative or Liberal candidate, but on no account for a Labour candidate, on the plea that the Labour party was out for a whole-time State medical service. It should not be called a non-party fund.

Mr H. D. POLLARD (Bedfordshire), while quite satisfied about the legal position, was profoundly dissatisfied as to the moral right of the trustees to use the money in the way suggested.

Dr J. HOLMES (Bury) also supported West Ham.

Dr BRACKENBURY said that, strictly speaking, the West Ham motion was wrong. The trustees had not allocated £1,000 to the British Medical Association fund. There was no proposal to contribute out of the trust fund a sum or money to another fund. He agreed that such a thing, while not illegal, would be inadvisable. The proposal actually made was different. The trustees reserved to themselves the use of this money. What they proposed to do was to set apart £1,000 from the fund for a particular purpose, they themselves to approve the candidates they proposed to support, and to lay down any other conditions. He thought it was quite wise for the trustees of this fund to earmark £1,000 for their use in the support of such candidates as would in their view enable them better to carry

out the use of the objects of the Trust. It was very important to have somebody in Parliament—he did not mind on which side of the House—who understood the position of insurance practitioners when proposals for the extension of the insurance service came forward.

Dr D. O. TWINING, speaking for a committee (Devonshire) which had made its 100 per cent contribution said that it was unanimously against the use of this fund for political purposes.

Dr H. L. PEARSON (Birkenhead) said that the proposal to allocate money for this purpose would increase the difficulties of Panel Committees in inducing the members to agree to make contributions.

Dr DUN said that the critics had taken in extraordinarily small view of medical organization. The best way to avoid having to spend this fund in defence against some Government proposal was to make the voice of insurance practitioners heard in Parliament where the medical profession was very inadequately represented. The first object of this fund was not to strike pay—though it was an important object to compensate those who in certain eventualities would suffer—but to secure it possible that that occasion never arose. It was a short sighted view that until a large sum of money was available for protective purposes none was to be spent on what might be called political purposes. To get an insurance practitioner in Parliament would be extremely useful although the claims of practice made it very difficult to find one who would make what might be a severe sacrifice scarcely possible for those who had not private means.

Sir ROBERT BOLAM said that, as Dr Brackenbury had explained, this money was not to be placed in the hands of the body with which he (the speaker) was primarily identified—the British Medical Association or its committee. No doubt in the view of many committees it would be pleasant to reserve the accumulations of this fund until it reached a quarter of a million. But what was the fund for? Did the Government imagine that the fund was non-political? Those responsible for the fund might sit in the background treasuring their quarter of a million until it became too late for its effective use. Medical men in Parliament had been of the greatest use to the profession, not merely by their interventions in debate but by the impression they were able to give to legislation in embryo. The amount of money laid aside for this purpose was a mere bagatelle. It would pay insurance practitioners over and over again if by the expenditure of a few thousand pounds they could support two or three people in Parliament. It might avert the cataclysm which was in view when this money was collected.

Dr J. S. EDWARDS (Perth) spoke in favour and Dr J. A. PRINHAM (Dorset) against the West Ham resolution.

Dr BEADLEY, in reply, said that Dr Brackenbury's argument as to the exact form in which the money would be allocated was a mere quibble. The West Ham resolution clearly indicated the position. This fund could not put members in Parliament. Members were elected to Parliament as party men, and many hundred and ninety times out of a thousand their votes were given at the behest of the party whip without professional or any other considerations. The men in his district felt that their money was being surreptitiously conveyed to another fund whose purposes they were unable to support.

The Conference voted

For the West Ham resolution

71

Against

66

The result was received with cheer.

A motion was proposed by Dr J. HOLMES to consider the feasibility of returning on application from the executors of a deceased practitioner the amount he had paid to the fund. This was lost.

#### ANNUAL REPORT OF INSURANCE ACTS COMMITTEE

The Conference then returned to the miscellaneous matters dealt with in the Annual Report of the Committee.

#### Statistics

Dr GORDON WARD moved to instruct the Committee to prepare and issue a digest of the statistical information received following previous resolutions of the Conference on the subject. He complained that figures had been sent

in from his own area and nothing more had been heard of them.

Dr DUN was strongly opposed to the publication of a digest or analysis of the figures which had been collected. The figures were being collected for use when required and it would be very inadvisable to publish interim reports on the returns. Here again as in the case of the defence fund the response to the Committee's request had been unequal and some committees had done much more than others in the way of collecting statistics.

Preference was given to another motion on the same subject from Catehead whose representative Dr R. FOUNDS, urged that the time had now arrived for the setting up of a department for the collection of statistics and data in the operation of private and insurance practice. Dr DUN said that the situation was being watched and the Committee was prepared to set up a department when there was work for it to do but statistics had to be provided by individuals and no amount of central organization would produce the statistics. He thought that at present the need was met by the work done in the office. The motion was lost.

#### Change of Doctor

Dr C. A. RORIE (Dundee) moved a resolution viewing with regret the agreement come to between the Insurance Acts Committee and the Ministry regarding 'change of doctor' (see paragraphs 21-23 of the Committee's report). He asked the Conference to reaffirm its belief that permission to change doctor at six months except when the change was by mutual agreement would be a more satisfactory arrangement.

Dr A. FOUNDS (Sheffield) supported the resolution and said that before an important matter of this kind was decided it should have been brought before the Conference.

Dr DUN said that this was a case where he was compelled to ask approval of action taken without opportunity for consultation with the Conference. The position was a serious one as was made plain by Sir Walter Kinnear's speech at the last Conference. What had happened was that the patient's right to change was not limited as to time—it was only delayed administratively for fourteen days. Two difficulties arose in connection with this matter. The first was the ease with which insured persons had appeared to be getting certificates stating that they were incapable of work. A reason constantly given by doctors to the Committee was informed why they were unable to refuse the application of an insured person for a certificate was that the patient could immediately go to some other doctor. It had now been agreed that an experiment should be made with a new method which interposed a fortnight's delay and made it necessary for the patient to write a letter. A patient annoyed because he was denied a certificate might well think twice before he wrote a letter. But there was another difficulty—namely the wholesale growth of what could only be described as canvassing particularly in urban areas. Under the old arrangement of free choice without restriction as to time it was an easy matter for a man to go into a person's house collect four or five cards as a result of some plausible tale and get them transferred to his own list. Such cases were extremely difficult to deal with by the machinery of the General Medical Council because patients were loath to give evidence. The Committee regarded the new method as likely to put an effective stop to that business. It would be difficult for a man to go and get hold of a few cards because each insured person must make personal application. He was sure that the proceeding was quite sound. The reason why the Conference was not consulted was because the Ministry regarded the matter as urgent and approved societies were a king for a restriction in some way of freedom to change the doctor.

The Dundee amendment was lost.

Dr C. W. WINDSOR (Hertfordshire) asked that the wording on the medical card should be made stronger also so that it should be laid down that when an insured person gave some complaint against the doctor as the reason for the transfer this complaint should not be recorded or investigated by the Insurance Committee. Dr H. J. CARRILE (London) thought it would be better to leave it

laid down that the Insurance Committee should arrange the transfer and inform the insured person that if he wished to persist in the complaint he must do so in a separate letter. Dr E R FORHERGILL thought it would be rather unwise to put it in the mind of the insured person that he might persist in the complaint.

Eventually it was agreed that the whole of this question of the insured person's letter should be referred to the Committee.

#### Records

The Conference unanimously, on a motion by the Insurance Acts Committee, reaffirmed its opinion on the subject of medical records, that while the value of careful clinical notes and essential dates on such records was fully appreciated, it was unnecessary to record all attendances, etc., except where practitioners had agreed to keep full records of work done for statistical purposes.

#### Accident and Emergency Treatment

Dr E O TURNER (Buckinghamshire) had a resolution requesting the Committee, in view of the increasing number of motor accidents, to consider the whole matter with a view to the formation of a fund from which special payments for treatment might be made. Some members of his committee thought that motor accidents should be treated entirely as private cases, but the Ministry would not agree to that, others that this would afford a good opportunity of asking for an increase of the modest capitation fee, or the setting up of a special fund like the mileage fund to deal with these cases.

Dr J W BONE, who asked whether the Conference thought there was any chance whatever of getting what Dr Turner wanted, moved to proceed to the next business, and this was agreed to.

Dr J ARTHUR (Northamptonshire) moved that in the case of an insured person from another area fees for emergency treatment should be paid from the central fund, or by the area to which the insured person belonged. His committee was getting rather alarmed at the number of motor accident claims, and thought that some other fund should be available. In those counties through which the main motor highways passed it seemed only fair that the local practitioners should be remunerated out of some other fund than the local pool.

Dr DAIN drew attention to paragraph 31 of the Annual Report, and explained that this was one of the things which the Distribution Committee endeavoured to meet.

Dr H R CRAN (Sussex) said that Sussex had a greater motor density than any other county, but in the course of the year there were not more than thirty applications for emergency treatment, and only a small proportion of these were for motor accidents. Therefore he did not think this matter worth considering.

The motion was lost.

#### Mileage

Dr J P WILLIAMS-FREEMAN (Hampshire), who was received with applause, asked the Conference to record its dissatisfaction that, though the mileage statistics showed an increase of 25 per cent on the miles travelled, no increase was made in the Mileage Fund for 1927. The Conference would be familiar with the way in which the Mileage Fund was decided. The Mileage Committee was asked to study the returns of miles travelled by those who kept records, to decide the cost of motoring, the value of the time so spent, and the deduction to be made on account of the travelling done by the town practitioner, which was included in the ordinary capitation fee. That was a very abstemious calculation, but at the last meeting of the Mileage Committee the most recent statistics available indicated an increase of 25 per cent on the amount of work done, nevertheless, the amount recommended remained at the same figure because the cost of travelling had gone down. It was true that the cost of travelling was at the moment extremely low, but who was to say how long petrol and tyres would remain at their present price? Even allowing for the increased deduction for town travelling, the calculated figure would now be £243,000. The lump sum allowed to the Mileage Fund was £250,000, that was the stabilized

figure. Yet besides the £243,000 now calculated, the other disabilities, apart from mileage, of the country practitioner were supposed to represent a sum of £40,000, which should be added to the sum for mileage. He thought there was some danger of that £250,000 being allowed to crystallise year by year, while the liabilities of the country practitioner tended to increase.

Dr DAIN hoped the Conference would not record any dissatisfaction that there was no increase in the Mileage Fund. He was not sure that that 25 per cent increase had occurred since the figure of £250,000 was arrived at. The diminished cost of travelling was an important factor to bear in mind, also there was a slight but gradual decrease in the cost of living, which diminished the value of the time element. It would be unwise to reopen the question at the present time, and he did not think that the rural practitioner was greatly dissatisfied.

Dr WILLIAMS-FREEMAN said that if the Conference thought it better to take what it could get rather than run the risk of being cut down it could say so, but that was not his view. The Mileage Fund should be arrived at by a careful statistical study, and practitioners must abide by the consequences one way or the other, but they should not give up the strategical position they had gained.

Dr Williams-Freeman's motion on the subject was lost.

#### Range of Service

Several motions were on the agenda relating to ultra-violet ray treatment and the range of service, and Dr DAIN accepted the reference back of the section of the report referring to this subject, which expressed the view that the treatment was not necessarily a specialist one, but that each Local Medical Committee should decide on cases as they arose. It was difficult with the existing procedure to arrive at any solution which would be fair alike to the doctor who was prepared to administer this treatment and the patient who required it. The situation must be argued with the Ministry.

#### Medical Benefit for Old Age Pensioners

Dr DAIN also agreed to take up several amendments relating to the issue of a special card for old age pensioners, and to evolve a scheme, if possible, for putting this matter on a more satisfactory basis.

#### Ophthalmic Benefit

Dr H N BROWN (East Suffolk) moved that insured persons granted ophthalmic benefit by their approved societies should have a free choice of ophthalmic surgeon from the list issued (that is, the British Medical Association list), to which Dr W H PALMER (London) moved an amendment to delete the reference to the list, which, he said, did not include some men practising as ophthalmologists who were recognized in their areas as having the qualifications necessary for this service. Dr DAIN was unable to accept Dr Palmer's amendment. The only list available was the British Medical Association list, which was not confined to members of the Association, but was merely compiled for the convenience of doctors, patients, and the Ministry. So far as he knew, the only men who were prepared to give the service at the rate of remuneration available were on that list.

The amendment was lost, and the East Suffolk motion carried.

#### The New Arrangement with Insurance Chemists

The CHAIRMAN, when the Conference arrived at several amendments on the agenda which had to do with the revised arrangements made between the Ministry and insurance chemists, pointed out that the new agreement was arrived at without the knowledge of, or consultation with, the profession. It was an accomplished fact, which nothing that the Conference could do could alter. The profession had never had any quarrel with the chemists, and if it was anticipated that trouble would arise between any of the parties concerned, either between doctors and chemists, insured persons and chemists, or the Ministry and either party, was any good done at this moment by exploring the possibilities of disagreement?

Dr BRACKENBURY asked whether the Chairman would accept a motion to proceed to the next business. The Chairman said he could only do so if the proposers of the various amendments had no objection. Dr LOUNGS (Gateshead) it once agreed to withdraw in amendment which stood in his name, but Dr GORDON WARD (Kent), who had also an amendment deprecating the agreement on the grounds of public policy, persisted in moving it. He urged that if the Conference passed over the matter it would be taken that the profession had tacitly approved of the scheme.

Dr F RANCLIFFE said that in Lancashire the chemists in the co-operative movement were starting to be dispensing chemists under the Act, which raised the point that the greater number of prescriptions in insured persons took to his own co-operative society the bigger became his dividend as a member of the society. Dr WORMINGTON said that in Newcastle the co-operative societies did not pay dividends on prescriptions dispensed.

Dr BRACKENBURY appealed to Dr Gordon Ward "if it is any use," not to press the amendment or, alternatively, to alter its wording. At present it read: "The proposed arrangement, which would make it possible and financially profitable for chemists to limit the quality and quantity of medicines prescribed for insured persons, is contrary to public policy and must be resisted by every possible means." Was it necessary the Ministry having done this thing publicly, for the Conference to make this solemn pronouncement at the present stage? It could only lead to additional difficulty for the profession, the Ministry, and the chemists alike. Why not say it was against public policy and leave it at that?

Dr GORDON WARD accepted the suggestion. Dr BRACKENBURY added that even in that form he thought it might be better to pass it over. He doubted the wisdom of putting it on record. Dr WARD pressed for his amendment in the modified form, that the arrangement was contrary to public policy, and this was carried.

Dr H DIXIE (Northumberland) raised the question of the further difficulty which this arrangement might place upon rural practitioners in their endeavour to obtain an increase in the dispensing fee. Dr DIXIE said that that matter had been taken up with the Ministry, who stated that the agreement would not have any effect upon the dispensing doctor. He would be paid in the same way as before, and his fee would be the first charge on the Drug Fund.

Dr BRACKENBURY pointed out that even should the claim that the practitioner's 2s 3d be raised to 2s 6d be conceded the increase would not reduce what was left in the fund to below the minimum which had been promised to the chemists.

Dr V J L POLLARDON (Coventry) moved that the Committee be instructed to press that all data supplied by pricing bureaux and otherwise to Pharmaceutical Committees, be also supplied to Panel Committees. Dr DIXIE said that his own Panel Committee received these data already. Dr BRANLES said that that was by courtesy not by legal right. The motion was carried.

A long motion by Lancashire was withdrawn, but the mover expressed the view that the Committee should use its efforts to ensure that the dispensing capitation fee should in each year be at least equal to the amount per insured person on which the Drug Fund was calculated.

Dr GORDON WARD moved to call attention to the grave deficiencies in the pharmaceutical services, particularly failure to make up prescriptions promptly and to make due provision for emergency dispensing. Dr DIXIE said that the Insurance Acts Committee had set up a subcommittee to consider questions of prescribing and the alterations which might be expected to follow from the agreement with the chemists. The subcommittee would meet the following week but he did not know that what Dr Gordon Ward had just moved was within its reference. He regarded it as the business of Insurance and Panel Committees in their areas to see that the service was efficient. He could not accept a commission to collect reports on the state of affairs in the different areas. It was a matter for local action.

The motion was lost.

### 1 Proposed National Formulary

Dr B E A BARR (West Suffolk) moved that the Committee be urged to expedite the compilation of a national formulary. Such formulary would be useful especially for men on the boundaries of different areas, and would also lead to economy in prescribing.

Dr DIXIE welcomed this motion, but desired to hear what arguments could be put up against the formulary.

Dr H S BRANLES was against a national formulary, which, he considered, would give insured patients the idea that they were being prescribed for in a different way from private patients. It would also create a stereotyped condition of prescribing. Practitioners never seemed to appreciate what was in a formulary, and added various drugs to the formulary compounds, so that the result was to make prescribing more expensive.

Dr J W BOVE also opposed a national formulary for insured patients. If any formulary was to be set up it should be for all patients, insured or other. A century or more ago there was a 'Pharmacopoeia for poor persons' which was in general use. If it got about that anything of this kind was to be recreated, would it be for the good of the insurance service?

Dr H F OLDFIELD opposed it because it would come to be accepted as the correct method of dealing with insured patients, and the instrument for judging cases of so-called overprescribing.

Dr DIXIE said that the Conference had previously turned down a national formulary, but he had always been in favour of it. What doctor who dispensed for his own patients did not use stock mixtures? It was a matter of convenience. There was nothing to prevent a formulary, efficient, becoming standardized for private patients as well. It did not limit the choice of remedies, and consequently did no harm to the patient.

Dr BARR desired to withdraw his motion and leave the matter to the Insurance Acts Committee to report later, but the Chairman thought it best to obtain the vote of the Conference, and the motion was carried on a show of hands by what appeared to be a fair majority.

### Approved Society Referees

Dr A M STUART (Walsall) asked the Committee to take steps to secure the amendment of approved society rules which enabled the societies to require insured persons to submit themselves for examination, without reference to the practitioner in attendance by specially appointed referees. The referees, he said were not always men or such standing that their opinions would be acceptable to the general run of insurance practitioners. Nothing was known of the method by which they were selected.

Dr DIXIE said that the Committee could not undertake to secure the amendment of the rules of approved societies.

The Chairman said that here was a resolution asking the Committee to take steps, but nobody indicated what steps were to be taken.

Dr STUART said that to decide what steps were to be taken was the business of the Committee. (Laughter.) It was certainly in the power of the Ministry to secure amendment of the rules and the Committee could make representations to the Ministry.

The motion was lost. Dr DIXIE accepted another motion by Gateshead, asking the Committee to institute further negotiations with the Ministry with a view to securing in the next amending Insurance Bill an obligation on all approved societies to use the regional medical staff of the Ministry in place of private medical referees.

### Sickness Benefit

Dr J MCNEIL (Berksire) regretted that no action had been taken on the resolution of last Conference that approved society officials should not have the power to refuse sickness benefit on medical grounds alone to any persons certified as incapable of work by an insurance practitioner unless the person was reported fit for work by the regional medical officer. It had been held that this did not concern the medical profession, but surely the profession's honour was concerned.

Dr DIXIE said that the approved societies were given the entire responsibility of deciding who should or should

not receive sickness benefit. This was an internal matter concerning the responsibilities of approved societies. If the Conference deemed that there were thousands of such cases occurring it would be a different matter, but the argument was based on isolated cases.

A motion by Ayrshire that each Panel Committee be recommended to appoint a subcommittee to render any necessary assistance, when consulted, in cases where the opinion of the regional medical officer differed from that of the insurance practitioner, and there was an appeal, was lost, Dr DAIN pointing out that this was a matter for local action if any action were desired.

#### *Research by Insurance Practitioners*

Dr E A GREGG (London) proposed, and it was agreed, that the Conference approve of research being undertaken by insurance practitioners, but there was debate on another proposition by Dr Gregg, that the practitioners be remunerated for all such work. Dr Gregg said that the feeling of the London Panel Committee was that insurance practice offered the opportunity for a continuity of observation which would be most useful in connexion with any research of this kind, but it was surprising that the Insurance Acts Committee should go back on the policy of the British Medical Association that a doctor should be paid for what he did.

Dr DAIN said that the opinion of those who had been consulted was that less useful statistics would be obtained if this research was limited to insurance practitioners in respect to their insured patients. Therefore it was decided to make the scheme embrace the whole profession. Again, everybody consulted who had had experience of research work was against payment for such work. The matter had passed very largely out of the hands of the Insurance Acts Committee. The object was to obtain the services of volunteers, and every practitioner, whether a member of the British Medical Association or not, would be invited to contribute. There was no reason why Panel Committees should not collaborate with Divisions.

The motion that practitioners should be remunerated for such work was met by a motion to proceed to the next business, which was carried.

This concluded the discussion on matters arising out of the Annual Report of the Insurance Acts Committee, which was then put as a whole to the Conference and approved.

#### *Miscellaneous Matters*

Dr J HOLMES (Bury) moved that the time had now come when the committee of every insurance area should receive money from the central pool in full for all insured persons on its list. He gave some figures in support of his motion, but the Conference at this stage was breaking up, and his arguments were not well heard. Dr DAIN said that those concerned essentially were satisfied that the central pool did contain the proper amount to pay practitioners nine shillings per head for all the people for whom they were responsible. The matter of distribution was one as between committees, and until inflation was got rid of—and it was being slowly done away with—payment in full was not to be expected. The motion was lost.

A motion by Lanarkshire, instructing the Committee to secure that the administrative expenses of Panel Committees be paid out of insurance funds, and not deducted from the medical practitioners' fund, was also lost.

Dr C F T SCOTT (Middlesex) moved the reference to the Insurance Acts Committee of the consideration of the relationship of insurance practitioners to their insured patients in the matter of hospital treatment, and the need that insurance practitioners who so desired should have reasonable access to their own patients for treatment in local hospitals. Dr DAIN was not prepared to accept this as the business of the Insurance Acts Committee. The relationship of the doctor to his patients, so far as the hospital question was concerned, could not be separated into insured and non-insured categories. The motion was lost.

This concluded the agenda, and the Conference, which had started at 10 a.m., concluded at 7 p.m., with cordial votes of thanks to its Chairman, Dr Le Fleming, and the Chairman of the Insurance Acts Committee, Dr DAIN.

### THE CONFERENCE DINNER

FOLLOWING the Conference a company of about 120 set down to dinner at the Holborn Restaurant, with Dr L F FLEMING in the chair. After dinner there were some excellent speeches, interspersed with songs and humorous items. The members of the Insurance Acts Committee were the guests of the evening.

Dr LIONEL J PICTON, OBE, proposed the health of the Committee. Speaking for Cheshire, he traced the 'combative instinct' of that county back to the time when there was a Roman legion in Chester, one of whose surgeons was a Greek, so that the profession in Cheshire could claim descent from the school of Hippocrates himself. Just at present Cheshire was exercised over the threat to the well-being and even the existence of the general practitioner, who, regarding the Insurance Acts Committee as his mouthpiece, was jealous that it should unflinchingly represent his views, in its interviews with the powers that be. As illustrating the varied work of the modern practitioner, Dr Picton said that he knew of one doctor in a town of over thirty thousand inhabitants who, in addition to a large insurance and private practice, was also part-time medical officer of health, medical officer of a fever hospital, school medical officer, with four clinical assistants, surgeon in a hospital with sixty beds, and, not content with all this, an active magistrate. Cheshire's attitude was justified by the present tendency to limit the work of the general practitioner. One suddenly found that a county council had appointed a panel of specialists for something or other, and the Insurance Acts Committee had agreed to a list of consultants for something else. Cheshire objected to restricting the field of activity which was once open to all who were licensed to practise. But he concluded by saying that the Insurance Acts Committee was composed of members of remarkable business and professional insight, and that their sacrifices in the interests of insurance practitioners were much appreciated by the rank and file.

Dr H GUY DAIN, responding as chairman of the Committee, said that he regarded the chairmanship as the blue ribbon of the profession on its organizational side. It was the third time he had had the honour of replying to this toast, and he suggested that in future it would be more suitable if it were responded to by the 'baby' of the Committee. But he thanked those present very much for their commendations, and instead of any review of the work of the Committee, which had been exhaustively explored in the Conference that day, he might be permitted to tell one story which happened to be absolutely true. A lady patient who was suffering from cystitis belonged to an approved society, which wanted further information. Misreading the speaker's handwriting, the secretary wrote to her that he noted she was suffering from "eychitis," and that it would be necessary to know the nature of her eye accident and whether she was claiming compensation. (Laughter.)

Dr LE FLEMING, in response to the toast of his health, proposed by Dr G H SEDGWICK in a very entertaining speech (of which we hope to print some account in a later issue), said that his difficulty, as chairman of the Conference, had been, not the problems that were presented, but how to tap, without making it too obvious that he was doing so, the reliable sources of advice which fortified him on either side as he sat on the platform. The Conference was fortunate in having at its command the most perfect staff work that any organization could desire. The foundation of the success of the Conference was the office work behind it, and he called upon those present to drink to the health of the staff, coupled with the names of Dr Cox, Dr Anderson, and Dr Dwyer, respectively the Medical Secretary, the Deputy Medical Secretary, and the Scottish Medical Secretary.

Dr Cox said how pleased he was to hear the complimentary remarks of the Chairman, more especially because they indicated an appreciation of the work of some members of the staff in the background, and he wished to mention the work of Mr S Coulson, the clerk of the Committee, in particular. He then went on to refer to his recent visit to Paris to the conference of the International Union of Medical Organizations. The chairman of the conference was a Pole, the secretary a Frenchman, and the members included representatives from Bulgaria, Rumania, Yugoslavia, Lithuania, Holland, Denmark, Sweden, and other countries. He was struck by the fact that all the associations represented, some of them very large, were envious of the position which the profession had established for itself in Great Britain. That attitude was not a mere expression of compliment, for real envy emerged in the discussions which took place. Nearly all the discussions centred round national health insurance. Almost every country in Europe now had a national health insurance system. In Britain at any rate, two questions had been solved which still awaited solution in other countries, and had greatly depreciated the status of the

Practitioners on one or then—namely free choice of doctor and freedom with the administration of medical benefit by approved societies. The approved societies or their equivalents in other countries were shortly starting an international association, and would undoubtedly take their decisions to the League of Nations which through the International Labour Office was trying to establish some principles which would govern all systems of medical insurance in the countries which were members of the League. The Paris conference naturally felt that the approved societies were going to do this sort of thing, it was high time the medical profession did something on its side and therefore certain resolutions were passed which it was felt expressed the feeling of the profession. One was that in any insurance system the medical profession should take a leading part in governing the medical side of it. Another related to free choice of doctor and on this point all the representatives were agreed except the representative of Austria who stated that he could not vote for such a solution although he agreed with it in principle. In Austria dependants had to be brought within the scope of insurance and the doctors were employed by the insurance organisation. Dr Cox and that the conference showed the necessity that the profession in every country should keep its heads sharp. The tendency all over Europe was to set up insurance systems and gradually to make them State systems in which the doctors were merely employees. He had returned from the conference deeply impressed with the idea that in Britain the insurance system was greatly in advance of any other he could learn about in any country of Europe. But the price of liberty was eternal vigilance. (Applause.)

## British Medical Association

### CURRENT NOTES

#### Spa Practitioners Group

The Council, at its meeting on October 12th sanctioned the formation of a Group of Spa Practitioner membership to be open to those members of the Association who regularly prescribe the mineral waters or baths or the spas in which they reside, or who are on the staff of a hospital or clinic where the use of the local mineral waters is part of the routine treatment. The Council also agreed that a meeting of those eligible to form the group should be held at an early date. It has since been arranged that the meeting shall be held at the headquarters of the Association on Wednesday, November 23rd at 12.30 p.m. Formal notice will be found under Association Notices. The Medical Secretary will be glad to hear from practitioners who claim to be members of the group and whose names have not already been received.

#### The Royal Medical Benevolent Fund and the B.M.A.

The Chairman of Council received with great pleasure after the Autumn Dinner of the Association on October 12th a letter from Sir Thomas Birlow Bt, President of the Royal Medical Benevolent Fund, in which after thanking the Council for its hospitality he went on to say warmly he appreciated the thorough and whole-hearted way in which the British Medical Association had helped the Royal Medical Benevolent Fund by sending Sir Robert Blam, Dr C. O. Hawthorne, and Mr F. H. Scott to serve on its Council, and by the way in which the Association had placed the needs of the Fund before its members thus facilitating the gathering of subscriptions. In view of the prominence the Association is giving to this new development of its work the Chairman of Council was gratified to have this testimony, as no doubt the members of the Association generally will be.

#### Some Work of the Week

Apart from the meeting of the Paucal Conference the week ending Saturday, October 22nd was mainly occupied by meeting or subcommittees. On Tuesday, October 18th the Ethical Subcommittee dealt with two cases referred to the General Ethical Committee by Divisions. On October 22nd at the meeting of the Contract Practice Subcommittee a request for an opportunity to discuss the question of charges for medical attendance on juvenile members was referred from the Independent Order of Oddfellows. It was decided to accede to this request. The Puerperal Subcommittee on Thursday approved a report of Mr. H. A. E. which will be submitted to a meeting of the Committee arranged for November 23rd.

## Association Notices

### 11 INCH AND DIVISION MEETINGS TO BE HELD

**BRANCH BRANCH COVENTRY DIVISION**—A meeting of the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, November 1st at 8.30 p.m. Dr A. J. Wilson will demonstrate a case of miliary exanthema in an adult aged 30. Paper by the chairman Dr Brail on medicine in lay literature.

**BRANCH BRANCH BIRMINGHAM**—A general meeting of the Birmingham Branch will be held at the Warwick Hotel, Warwick, on Friday, November 4th at 5 p.m. The Branch Council will meet at 2.30 p.m. Agenda: A British Medical Association Lecture by Dr E. E. Glynn, Liverpool, entitled "Anaphylaxis, the Shock and Dick test and the method of immunizing diphtheria patients." Tea by invitation of the president.

**BRANCH BRANCH DUMFRIES AND GALLOWAY DIVISION**—The next meeting of the Dumfries and Galloway Division will be held in the Dumfries and Galloway Sanatorium on Tuesday, November 1st at 3 p.m. Dr Steven, the medical superintendent, will describe the lay-out of the sanatorium and the new buildings will be visited. A demonstration will be given of the working of the new x-ray plant including the Potter-Bucky diaphragm and stereoscope. The use of the ultra-violet light apparatus will also be shown comprising the carbon arc, the tungsten arc and mercury vapour lamp. Tea will be supplied and the chairman (Dr Livingston) has kindly undertaken to provide transport to and from Dumfries for members at a distance if early notice is given.

**BRANCH BRANCH ENGLISH DIVISION**—The following programme of meetings has been arranged:

**December 1st** At Cokermouth Annual Dinner  
**December 7th** At Mansport Paper by Dr J. A. Douglas Smith. The Early Treatment of the General Sex. Demonstration of Cases.  
**March 1st** At Whitby in Visit to the Whitby and West Cumbria Hospital Demonstration of Cases.  
**March 1st** At Carlisle Annual General Meeting.

Further details of the meetings will be announced later.

**DUNDEE BRANCH**—The annual business meeting of the Dundee Branch will be held in the Medical School Dundee at 8.30 p.m. on Thursday, November 10th.

**EDINBURGH BRANCH SOUTH EASTERN COUNTIES DIVISION**—The annual dinner of the South Eastern Counties Division will be held in the Royal Hotel, Galahiel, on Wednesday, November 2nd at 7 p.m. when Dr N. P. Fairfax (Innerleithen) will preside. The official guests of the evening will be the Earl of Home, Sir Popham Lush (President of the British Medical Association) and Mr M. G. Thorburn (Lord Lieutenant of the County of Peebles). A large attendance of members of the Division is hoped for. Price of dinner ticket 10s. 6d. with an additional 2s. 6d. towards the cost of entertaining the official guests.

**FIFE BRANCH**—The first clinical meeting of the section of the Fife Branch will be held in the Maternity Home, Kirkcaldy, on Thursday, November 3rd at 3 p.m. Dr A. Maitland Pamay (St. Andrew's) will address the meeting on ocular manifestations of gastro-intestinal disease.

**KENT BRANCH**—The quarterly meeting of the Kent Branch will be held in the Royal Hotel, Bromley, on Thursday, November 10th at 5 p.m. A British Medical Association Lecture will be given by Dr George A. Allan (Glasgow), a member of the British Medical Association Special Subcommittee on Pneumatic Heart Disease in Children on the early detection and supervision of rheumatic infection in children.

**KENT BRANCH AN APP DIVISION**—The next meeting of the Ashford Division will be held on November 2nd at 4 p.m. in the North Street Club when a lecture will be given by Mr R. Mowll, deputy coroner on the new Coroners and Registration Acts.

**LANCASHIRE AND CHESHIRE BRANCH**—A science meeting of the Lancashire and Cheshire Branch will be held at the Birkenhead General Hospital on Wednesday, November 2nd at 3 p.m. Agenda: Dr F. G. Foster (Birkenhead) Treatment of gonorrhoea in the male as at present practised and demonstration of cystoscopic technique. Mr Eldon Gort (Birkenhead) The treatment of hypopyon ulcers of the cornea with the electric thermocatheter. Discussion: The future of non-teaching hospitals to be reduced by Dr Dalzell (Birkenhead). Tea will be provided. Members proposing to attend are requested to notify the honorary secretary of the Birkenhead Division, Dr Dalzell, 41 Balls Road, Birkenhead.

**METROPOLITAN COUNTIES BRANCH CITY DIVISION**—A meeting of the City Division will be held at the Metropolitan Hospital, Kingland Road, E. on Tuesday, November 1st at 9.30 p.m. Dr W. Langdon Brown will read a paper on the modern aspects of nephritis.

**METROPOLITAN COUNTIES BRANCH FINCHLEY DIVISION**—The following programme of meetings has been arranged:

**November 1st** Dr Alfred Cox The Secret of the Success of the Association.  
**December 6th** Mr Trevor Davies Some Points in Gynaecological Diagnosis.  
**January 10th** Dr W. S. L. Linn (Lancet) to be announced later.  
**February 1st** Dr F. W. R. Wall Faith Healing.  
**March 6th** Mr J. W. Joyce The Clinical Features of Thrombosis of the Branches of Coronary Arteries.  
**April 3rd** Mr J. S. Herman L.D.S. The Dental Treatment of Fractured Jaws.  
**May 1st** Annual Meeting.

All the meetings are to be held at the Finchley Memorial Hospital at 8.45 p.m.

**METROPOLITAN COUNTIES BRANCH KENSINGTON DIVISION**—A general meeting of the Kensington Division will be held at St. Mary Abbott's Parish Hall, Kensington, on Tuesday, November 1st at 8.45 p.m. Agenda: An address will be given by Dr Christine Murrell on the need of some form of cheaper nursing home accommodation for the poorer middle classes.

**METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION**—The next meeting of the Lambeth and Southwark Division will be held at the Lambeth Hospital, Brook Street, S.E. 11, on Friday, October 28th, when Dr A. L. Baly, the medical superintendent, will read a paper on Pool Law administration. Tea at 4 p.m.

**METROPOLITAN COUNTIES BRANCH ST PANCRA'S DIVISION**—A meeting of the St Pancras Division will be held in the British Medical Association House, Tavistock Square, W.C. 1, on Tuesday, November 8th at 9 p.m. Professor V. H. Molliam of the University of London will give an address on some experiments in malnutrition.

**METROPOLITAN COUNTIES BRANCH SOUTH WEST ESSEX DIVISION**—A meeting of the South West Essex Division will be held at the Westcliff Schoolrooms, High Road, Leyton on Tuesday, November 8th at 3.30 p.m. Dr R. M. Bronte will read a paper on the medical witness. A reception and dance will be held in the Town Hall, Leyton on Thursday, November 24th. All medical practitioners, whether members of the British Medical Association or not, together with their friends will be warmly welcome. The function will be in aid of medical charities. Tickets 7s 6d single 12s 6d double (lady and gentleman), can be obtained from the honorary secretary, or from members of the Executive Committee.

**MIDLAND BRANCH CHESTERFIELD DIVISION**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, November 11th, at 8.15 p.m. Dr George Wilkinson will read a paper on small but troublesome ailments of the ear and nose.

**NORFOLK BRANCH**—A meeting of the Norfolk Branch will be held at the Norfolk and Norwich Hospital, on Wednesday, November 30th, at 3.15 p.m., when Dr H. J. Stirling will read a paper on the diagnosis and treatment of hyperthyroidism (illustrated by lantern slides).

**NORTHERN COUNTIES OF SCOTLAND BRANCH BANFF, MORAY AND NAINN DIVISION**—A meeting of the Banff, Moray, and Nainn Division will be held on Friday, November 18th when Professor D. Murray Lyon will deliver a British Medical Association Lecture on asthma, with special reference to its etiology and treatment.

**NORTH OF ENGLAND BRANCH BISHOP AUCLAND DIVISION**—The following programme of meetings has been arranged:

Nov. 25th Lecture by Dr D. Wells Patterson: The Earliest Signs of Disease.

Jan. 27th Lecture by Dr J. C. Spence: Medical Emergencies in Children.

Feb. 24th Lecture by Dr Harvey Evers: Uterine Haemorrhage—Some Practical Observations.

The meetings will be held in the Cottage Hospital, Bishop Auckland, at 8 p.m.

**NORTH OF ENGLAND BRANCH DARLINGTON DIVISION**—A meeting of the Darlington Division will be held at the Hospital, Darlington on Thursday, November 17th, at 8.30 p.m., when an address will be given by Professor Hugh Maclean on the subject of the medical treatment of gastric and duodenal ulcers. Members from neighbouring Divisions will be welcome.

**NORTH OF ENGLAND BRANCH SUNDERLAND DIVISION**—A meeting of the Sunderland Division will be held at the Monkwearmouth Hospital, Sunderland, on Wednesday, November 2nd, at 9 p.m. Agenda: Medical certificates for elementary school children; report of Executive Committee; report of representative at Annual Representative Meeting. A clinical evening will be held at the hospital the same evening at 7.30 p.m. A dance in aid of the B.M.A. Charities Fund has been arranged for February, 1928.

**NORTH OF ENGLAND BRANCH TYNESIDE DIVISION**—A dance will be held at the Waverley Ballroom, Whitley Bay, to-day (Friday, October 28th). Tickets, 12s 6d each may be obtained from Dr John Murray of 4, Albert Place, North Shields. The proceeds will be devoted to the charities supported by the British Medical Association.

**SOUTHERN BRANCH PORTSMOUTH DIVISION**—The second meeting of the session of the Portsmouth Division will be held on Thursday, November 10th at the Queen's Hotel, Southsea at 9.30 p.m., preceded by a supper at 9 o'clock. Mr Norman C. Luke will speak on "busman's holiday" in America. The cost of the supper is 3s 6d, including gratuities. Notice of intention to be present at the supper should be given to the honorary secretary, Dr F. C. B. Gillingham, 15 Bading Avenue, Southsea by the preceding Monday. Members from other Divisions are cordially invited to the meetings. The following programme of further meetings has been arranged:

Nov. 24th Clinical Meeting, Royal Portsmouth Hospital 3 to 5 p.m.

Dec. 8th Clergy Night, Dr I. M. R. Walshe, Faith Healing.

Jan. 10th Annual Dinner at the Swan Cafe in aid of Medical Charities.

12th Dr E. Appolter: The Possible Cooperation of the Profession in the Treatment of Mental Disorder.

Feb. 9th Professor Hugh Maclean: Renal Disease and High Blood Pressure.

Mar. 8th Dental Night, Dr A. Livingston, M.D.S. (the title of the dental subject will be announced later).

22nd Clinical Meeting, Royal Portsmouth Hospital 3 to 5 p.m.

April 12th Sir Walter Fletcher, M.B.E., F.R.S.: The Work of the Medical Research Council.

May 10th Business Meeting.

— Annual Dinner.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH SWA SEA DIVISION**—

The following programme of meetings has been arranged to be held at the General Hospital, Swansea at 8.15 p.m., unless otherwise announced:

Nov. 10th Lecture by Sir Evan J. Nichol.

24th Discussion: Acute Intestinal Obstruction. To be opened by Dr D. Price, F. Evans (Medical), Dr A. T. Madden (Pathological), Mr How H. Gabe (Surgical).

Dec. 8th B.M.A. Lecture by Dr S. A. Kinnier Wilson.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH SOUTH WEST WALES DIVISION**—A meeting of the South West Wales Division will be

held on Wednesday, November 2nd, at 3 p.m., at the Ivy Bush Hotel, Carmarthen. Business Report by the representative at Annual Representative Meeting at Edinburgh, arrangements for future meetings, British Medical Association circular, "Public education in health", elect extra members to the Executive Committee for the Annual Meeting at Cardiff in 1928.

**SURREY BRANCH CROYDON DIVISION**—At the meeting of the Croydon Division to be held at the Croydon General Hospital on Wednesday, November 9th, at 4 p.m. Mr J. S. Bookless will give a lecture demonstration on the exophthalmos.

**SURREY BRANCH GUILDFORD DIVISION**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford on Thursday, November 3rd, at 4 o'clock. Paper by Messrs Butler and Sheaf: Surgical and other experiences in America. Tea served at 3.45 p.m.

**SURREY BRANCH KINGSTON ON THAMES DIVISION**—A general meeting of the Kingston on Thames Division will be held at Surbiton Hospital on Tuesday, November 1st, at 8.45 p.m. Professor Hugh Maclean will discuss the treatment of diabetes from the general practitioner's point of view.

**SUSSEX BRANCH HASTINGS DIVISION**—The next meeting of the Hastings Division will take place at the Queen's Hotel on Tuesday, November 1st, at 8.15 p.m. Dr Morgan will read his report on the Annual Representative Meeting at Edinburgh. Dr D. McAlpine (neurologist, Middlesex Hospital) will give an anatomical and pathological resume of some of the commoner diseases of the nervous system (illustrated by lantern slides). Members are reminded that the annual dance will take place on Friday, December 2nd, at the Albany Hotel, Hastings. Tickets, 7s 6d (including buffet supper). Members are requested to notify the honorary secretary, Dr T. Reed, Hawkswood, London Road, St Leonards on Sea, as early as possible how many tickets they will require.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH HEREFORD DIVISION**—The fifth of the series of post graduate lectures arranged under the auspices of the University of Birmingham will be given by Dr Douglas Stanly on problems in the diagnosis of lung disease at the Herefordshire General Hospital on Friday, November 4th, at 3.30 p.m. Tea will be provided.

**YORKSHIRE BRANCH HALIFAX DIVISION**—The annual dinner of the Halifax Division will be held at the White Swan Hotel on Thursday, November 17th, at 7.30 p.m.

**YORKSHIRE BRANCH SHEFFIELD DIVISION**—A general meeting of the Sheffield Division will be held on Friday, December 9th, at the University, Sheffield, at 8.30 p.m., when a British Medical Association Lecture will be delivered by Professor H. Beckwith Whitehouse, on practical applications of recent views on the menstrual functions.

#### SPI PRACTITIONERS GROUP

The formation of a Spi Practitioners Group has been sanctioned by the Council of the Association. Membership of the group is open to those members of the Association who regularly prescribe the mineral waters or baths of the spas in which they reside, and those members of the Association who are on the staff of a hospital or clinic where the use of the local mineral waters is part of the routine treatment. A meeting of those eligible for membership will be held, to inaugurate the group, at the British Medical Association House, Tavistock Square, London, W.C. 1, on Wednesday, November 23rd, at 12.30 p.m.

## Meetings of Branches and Divisions

#### CAPE MIDLAND BRANCH

A GENERAL meeting of the Cape Midland Branch was held at Dr Laurie's residence, Port Elizabeth on September 15th, when the president Dr J. G. MUTERER, was in the chair.

In a symposium on fractures of the forearm and hand the following papers, illustrated by lantern slides, were read: "Surgical anatomy and mode of causation" by Dr B. KALLA, "Non operative treatment," by Dr T. WINKEL, "Operative treatment" by Dr R. D. LAURIE.

In the discussion which followed Dr T. P. OVES recalled some of his experiences with Lane's plates and screws, and also with osseous grafts. Dr HUGH drew attention to the advantages of uterine oxide in the treatment of fractures in out-patient practice. Dr BLAW stressed the importance of local tenderness as an aid to the diagnosis of the site of fracture. In reply, Dr LAURIE answered questions which had been put to him by different members and described his method of preparation of the skin prior to operations on the bone. Dr NORMAN WILSON showed x-ray films of a fractured olecranon, which he had united to the shaft by wiring. Dr J. G. MUTERER congratulated the readers of the papers and thanked Dr Laurie for the time and trouble he had taken in the preparation of lantern slides.

The honorary secretary was instructed on behalf of the Branch to congratulate the Mayor of Port Elizabeth on his recent appointment. The next meeting, a clinical one, will be held in Uitenhage on October 27th.

**LANCASHIRE AND CHESHIRE BRANCH SALFORD DIVISION**—On October 6th the Salford Division held a special meeting in the Mayor's Parlour at which Dr NATHAN RAW gave an address upon recent research in tuberculosis. The members of the Salford Insurance Committee and of the Health Committee of Salford Corporation were present by invitation.

## METROPOLITAN COUNTIES BRANCH LEWIS HAM DIVISION

4. A meeting of the Williams Division was held on October 18th at 448 W. 12th St. Dr. W. H. HALLINAN, M.D. occupied the chair. In the absence of Dr. James Hawthorne through illness, Dr. GEORGE JONES opened a discussion on birth control. He gave an historical account and a full explanation and demonstrated some varieties of contraceptive pessaries. Dr. HALLINAN stated that the medical profession is more liberal than the clergy and professors. Dr. B. DUNSTON of Berkeley and Dr. BUCHAN supported Dr. Jones while Dr. BEATTIE HALLINAN and ARNOLD held contrary views.

A vote of thanks was accorded to Dr. Jones for his address.

## METROPOLITAN COUNTIES BRANCH SOUTH WEST Essex Division

A MEETING of the South West Essex Division was held at Woodford Jubilee Hospital on October 11th. Dr BARNES moved.

That this Division heartily approves the motion introduced by Dr E. R. Fothergill (Brighton) at the Edinburgh Meeting.

That the Representative is viewing with considerable concern the indications of a continually being made of private medical practice until the supply of the State is voluntary. It is and there is a feeling in that this is not only a limitation to the resources of the individual members of the medical profession but a threat to all classes of the community in future. The Committee to which all the members of the profession are referred is a committee of private practice and it is not possible to have a medical profession and to expect to bring the Branch into the Division of cooperation with the local medical profession for the purpose.

Dr Badenoch enumerated the many departments of medicine which had recently been taken out of the hands of the medical practitioners. He quoted passages from the Education Act 1921 and Dame Janet Campbell's report advocating co-operation with local practitioners in the formation of clinics and pleaded that this co-operation was not in fact desired by the authorities concerned. He stated that the Government had a large majority in the Executive Council and that it was bound to arrange for a further and fuller discussion of the subject at an early date.

Dr F. E. Coombs has frequently addressed the meeting on the general subject of the connection between diet and disease. He deplored the prevalent notion of the "functional" and urged that the principal factor in disease should be brought to the notice of the public more than it is at present. First, take on the importance of more trouble to the consumer was the direct legacy of the great quantities of some of the leading medicinal chemicals and now that the principal part of disease was beginning to be investigated the great difficulty was found in determining the knowledge, gained by well known vendors, might be perverted in a very real way by an exaggeration of the claims of the toxicogeners at a certain point as an expression of caution. It once a typical exophthalmic goitre was due to add in intensity but repression of fear might have been cured while the case was in a more fatal stage. Depressed emotion was frequent in the latter part of disease though the patient might have recovered in the initial upswing of the disease, especially where the emotion was full expression at the time. Frequently some minor defect was found associated with a general disturbance, for example, errors of refraction in eyes, well-known phenomena of the upper respiratory tract, or sexual changes invariably denoted a subject in the mind the harmonious necessary for perfect health was disturbed. Sexual upsurges were very frequently the disturbing factor, but not the inevitable one.

Several members took part in the discussion which followed and a very hearty vote of thanks was accorded Dr Crookshank for a witty and thought-provoking lecture.

## NORTH OF ENGLAND BRANCH BLYTH DIVISION

A meeting of the Birth Division was held on October 12th. The monthly circular was discussed and other matters of local interest dealt with.

Dr Milne was asked to arrange the golf competition for the

Dr C F Fairhe agreed to prepare a programme for a speaker in December to which one of the Association's lecturers from Newcastle will be invited.

The Secretary was instructed to write to Mrs Angu conveying to her the Division's sympathy inasmuch as Dr Angu was personally known to nearly all the members of the Division and was a favourite with them.

There was music and coffee and an enjoyable evening was spent

## NORTH OF EAGLE D BRANCH HENNAH DIVISION

A meeting of the Hexham Division was held at the Abbey Hotel on October 19th to discuss a programme for the winter season. Dr James Hutton, President of the North of England Branch, gave an address on the importance of the work of the member body of the British Medical Association. Mr. J. M. HODGE, on honorary secretary of the Branch, described the facilities provided by the Newcastle Bureau for secretarial work for helping secretaries of a Division. As the Division covers a wide area it was agreed on the motion of Dr McCOLL that meetings be held in different parts of the Division. Dr Goodwin invited the Division to hold a meeting at Barrford Sanatorium. Coffee was served at the conclusion of the meeting. A programme of scientific and social meetings is being arranged.

SOUTHERN BRANCH I LE OF WIGHT DIVISION

The quarterly meeting of the 111 of Wight Division was held at the Osborne Cottage Hotel on October 22nd Major General Sir S. G. R. Moore, KCB, CBE, taking the chair. Dr. Charles Moore, consulting physician to the Osborne Convalescent Home and Phys. Coun. to the Royal Devon and Cornwall Hospital delivered

an addr on the behaviour of the diaphragm in one case of pleural effusion. He described the movements of the diaphragm in health and disease and explained the reasons for needlings proving abortive. A hearty vote of thanks was awarded him for his lucid and interesting address.

Attending the members and their guests one twenty two in all sit down to supper and a most enjoyable evening was spent. This is the first occasion within recent years at any rate that an evening meeting followed by a supper has been held and it was well received that a repetition is proposed.

Thank very much also accorded to Major General Sir S. Gule Moores for suggesting and arranging the meeting.

SOUTHER BRANCH PORT 10TH DIVISIO

A MEETING of the Port Louth Division was held at the Queen's Hotel, Southsea, on October 13th, under the chairmanship of Dr LYTLE. The chairman extended a hearty welcome to the Recorder of Portmouth, Mr John Harris, Judge Lacey, other members of the legal profession and also to medical non members who had been specially invited.

Sir John Ho a BRADFORD A CMG FRS President of the Royal College of Physicians in an address on medical defence, suggested that it was necessary for a learned profession to need a defence association but the who practised the art and science of medicine had found them unnecessary. He added that medicine dealt with fact while the law dealt in the main with opinions. No one could have opinions as a habit but in spite of its uncertainty, foundation the methods of the lawyer worked well.

The Recorder of Port Mouton Judge LAYLE and other members of the legal profession Mr F G ALLEN Clerk of the Peace and Lieutenant Commander Ray subsequently spoke.

The total attendance including fourteen members of the legal profession was a hundred of whom eighty partook of supper at 9 p.m.

The meeting terminated with a hearty vote of thanks to Sir John L. Bradford proposed by Dr MRS. J. E. E. and seconded by Dr BEATON.

## SOUTH WALE AND MONMOUTH HIRE BRANCH SWANSEA DIVI 107

A meeting of the Swansea Division was held at the Swansea General Hospital on October 6th when the chairman Dr DANIEL E. EVANS delivered a most interesting and instructive address on the significance of the cardiac murrmur. Twenty five members were present.

## National Insurance

## LOCAL MEDICAL AND PANEL COMMITTEES

## COVENTRY

At the meeting of the Coventry Panel and Local Medical Committee on October 12th, with Dr ARTHUR HAWLEY in the chair consideration was given to an inquiry received from a Poor Law authority as to whether certificates enabling insured persons to receive sickness benefit could be given to contacts with small pox whom the doctors had ordered to refrain from work. It was decided that no certificate ought to be issued unless definite diagnosis of incapacity for work could be indicated, but that the hardship of the position should be brought to the notice of the Minister of Health.

The Committee unanimously passed a resolution of protest against the chemists' new terms of service, 'being of opinion that practitioners are placed in an invidious position and that the traditional relation between doctor and chemist must suffer, also that the liability of the individual chemist to suffer loss is calculated to prejudice the morale of the dispensing service to the ultimate detriment of the insured persons.'

The Panel Committee decided to ask the Insurance Acts Committee to press for the supply to Panel Committees of all data relative to prescribing issued to the local Pharmaceutical Committee by the Pricing Bureau.

## WARWICKSHIRE

The Warwickshire Panel and Local Medical Committee met at Lutterington on October 6th, Dr Herbert Milnes presiding. Difficulties under the new arrangements with the pharmacists were indicated by the reference through the Insurance Committee of a prescription for eight ounces of brandy. The Committee decided that in the absence of justification this was excessive for a single prescription.

The Herefordshire scheme for post-graduate study financed out of the special milerage grant was considered, and it was decided to ask the Ministry of Health to approve a similar scheme for Warwickshire.

The sum of £15 15s was voted towards the Wilkams Freeman Presentation Fund.

The Insurance Committee was asked to vary the local distribution scheme so as to provide for the halving (from six to three) of the units credited for temporary residents' treatment in cases where the patient is an inmate of a convalescent home.

## Correspondence

## THE PANEL CONFERENCE

## A Retrospect and Some Criticism

SIR,—The Conference of Local Medical and Panel Committees last week was not what one would like it to be. The extraordinary management of each speaker having to walk from his seat in the body of the hall up to a place between the Chairman and one of the Medical Secretaries prevented many who would have liked to make a few short remarks from speaking at all. Medical men are not practised speakers, and they should not be put to such an ordeal. How much better it would have been to have had a slightly raised rostrum about one third of the way down the hall from which they could speak, and what an amount of time it would have saved!

Owing to this very defective arrangement the discussion was very poor and very useless. The result was that motions were carried that ought not to have been carried at all, and motions were defeated that should have been carried. The futile discussions we have listened to every year on disciplinary procedure have so curtailed our time that matters of much greater importance have been passed over in too great a hurry. I think everyone is sick of these interminable discussions on discipline. All the morning and much of the afternoon was wasted.

Again, the loud speaker used did not fulfil its purpose in enabling everyone to hear. Many in the hall did not hear half of what was said, the position of the transmitter just in front of the face of the speaker was most annoying.

The whole attitude of the Conference is much too much of the follow my leader type, and unfortunately those speakers who are independent and not afraid of speaking their minds are not supported as they should be. Perhaps some have only themselves to thank for this, and they might have been more successful by using a little more tact.

I am confident that the discussion was too much curtailed on many matters owing to the strong desire of many in the meeting to get the business finished. For example, very little was said about the new method of change of doctor. This is not so advantageous as might be thought. Of course, when a person is issued a certificate by one doctor and wishes to change for this reason, it is as well to give him as much trouble as possible. Just because it was alleged that during the strike this sort of thing occurred—in assertion one feels very much doubt about—why should every insured person who wishes to change be put to the very unpleasant task of going to the

doctor from whom he wishes to change and tell him to his face he wishes to give him up? Also, when a person moves from one part of a town to another, perhaps two or three miles away, why should he be troubled to go to both doctors and waste so much time? Free choice of doctor was our own slogan—why make it so difficult? This is the first method the next is to send the medical card to the Insurance Committee with a letter stating that he wishes to change. How many will write this letter? Very few. The insurance clerks will be put to a lot of trouble over a very small matter. Some have already gone so far as to have a typed form of letter ready for the insured person to sign. Why should it not be sufficient for insured persons to be simply informed that they can get their cards signed by another doctor after fourteen days also be informed—much, no doubt, to the doctor during the fourteen days wait—they must pay him his fee as a private patient.

It was fortunate that the question of ultraviolet ray treatment was referred back, for there is no doubt their decision that it came within the terms of service would have been deferred.

It was very unfortunate that nobody drew attention to the extraordinary action of the chemists in accepting 15 per cent reduction. What is behind this? There must be some reason for a body of presumably business men agreeing to this. I heard rumours but nobody referred to them. It cannot be that the chemists expect to get the doctors to be more economical—few would have the cheek to broach the matter. No, there is something behind. Can it be that the price of drugs is at present in many cases over 50 per cent too high, and that somebody is making too much profit?

The question of a national formulary was curbed but all the arguments used were against it. Many voted for it in the belief that they were voting for a local formulary, which is a very different thing. If you ask the commercial travellers who visit doctors all over the country they will tell you that certain drugs are used much more in certain parts, a very curious fact of which the promoters of a national formulary are not aware.

The motion by West Ham disapproving of the allocation of £1,000 from the National Defence Fund to the Medical Representation in Parliament Fund was carried by 71 votes to 66. This decision will be bitterly regretted later on. What we want more than anything else is a first class man to speak for us in Parliament. We have Lord Dawson in the House of Lords, we want some of his stamp in the House of Commons. The Medical Representation in Parliament Fund should be well supported, and one hopes that Panel Committees will subscribe in another way to this excellent fund.

Another matter that ought to have been discussed is the proposal to form clinics for eye work. Our experience of clinics ought to make us feel shy of this proposal, especially as the approved societies will try and control them and put in the men who will do the work at the cheapest fee.

The one bright spot in the arrangements for the Conference was the dinner at the Holborn Restaurant afterwards. This was very well arranged, the food and the entertainers were excellent, and the speech of Dr Sedgwick (whom one hopes to hear again) was a real treat to listen to.

These conferences ought to fulfil a very important part in the working of the Insurance Act, but if they are not conducted in a manner more calculated to obtain the opinion of the rank and file of the profession they will fail in their object. This last conference was mostly a waste of time—I am, etc.,

Hastings Oct 23rd

ARTHUR D. LAMBY

## CHANGE OF DOCTOR

SIR,—May I, in view of my own experience since the introduction of the new regulations regarding change of panel doctor, join in the protest this has evoked.

In most industrial towns there are, of course, some enormous panels mainly built up during or just after the war by the men who strived at home. Patients on these lists are attended to, as a rule, by assistants and junior partners, seldom or never seeing the principal whose name is on their cards. One often hears the plaint, 'I never seem to see the same doctor twice.' Consequently, there has been a fairly steady flow from these to the lists of doctors whose lists are small enough to admit of all receiving that personal interest and attention which patients have a right to expect.

In my own practice, up to the beginning of this month, every week brought two or three such recruits, but since the new procedure has been introduced, only one has so far attempted to transfer. The procedure is too complicated, and patients feel they must be doing something wrong in attempting to force the barriers of red tape. Consequently, they go to the doctor they prefer and pay his fees.

So far I have not heard of a single case where the burden is

### CURRENT NOTES

#### The Panel Conference Dinner

In publishing last week (SUPPLEMENT p. 174) in account of the annual Panel Conference dinner at the Holborn Restaurant we were only able to make brief reference to the speech by Dr G. H. Sedgwick who proposed the Chairman's health. Our reporter was so placed that Dr Sedgwick came among the speakers was not fully audible. We are indebted to one or two friends for the following reconstruction of a happy piece of after-dinner conversation.

Dr Sedgwick began by remarking that some matter of great importance—Cicero or it might be Mr. Gladstone—had said that virtue was its own reward but he was feeling strongly at the moment that the virtue of a cheerful willingness to oblige was apt at times to make one in alarming responsibilities. In an address to the aspirants to high British Medical Association, Dr Sedgwick suggested that they should always refer to speak of the excellent secretarial department of the Association as "The Office" saying it rather lightly with a jest and a slight fall in recent years it would be visible. This however by the way. His next remark was to ask the members of the Conference to drink the health of their Chairman Dr E. K. Le Fleming who, being born with a generous whim for his fellow members, came annually from the mountain heights of Dorset and after presiding with such dignity and grace over their deliberations in the Great Hall set the seal upon a worthy spent day by taking charge of the more festive gathering still with the same dignity and the same grace a little enlivened perhaps by the irresponsibility of a convivial occasion. At the annual Panel Conference it was impossible not to admire the way in which Dr Le Fleming sat all day upon his elevated seat of responsibility—with the Chairman of the Insurance Acts Committee and the personnel of The Office arranged to twinkle about him—and was not only quite undisturbed either by the pungency of Kent or the drizzle of West Ham but remained throughout the day cheerful, alert, and in the possession of a most successful attractive, unforced and debonair whilst his control of the Conference—disiplinarily disciplinary and unflinching—was admirable. Those who squeezed comfortably in the body of the hall (added Dr Sedgwick) could not but have a dim perception of the truth the Chairman enfolded in his arms of six stoutly appointed to listen to a continuous stream of orators from 10 o'clock to 7 o'clock not a chairman of whom they might justly be proud and to whom the best thanks were due for his services. In this chairman here a thing

which never changed was the Englishman's innate love of honouring publicly and enthusiastically those who served him without hope of reward.

#### Association's Ophthalmic List.

In giving oral evidence recently before the Departmental Committee on the Optical Practitioners (Registration) Bill the Association's witnesses submitted the following analysis (as at August 31st last) of the names appearing upon the Association's list of registered medical practitioners who have intimated their willingness to advise on ophthalmic cases and prescribe spectacle when necessary (at a fee of one guinea) for insured members of approved societies.

	England	Scotland	Wales	Total
No. of medical practitioners on B.M.A. Ophthalmic List (of whom 615 are members of B.M.A.)	—	—	—	77
No. of names and/or addresses on Ophthalmic List	677	63	—	1041

	Consultant (believed to be practising solely as such) as defined on List under (a) of Criteria.	Practitioner also engaged in General Practice placed on List under following Section of Criteria.				Total G.P.
		(a)	(b)	(b) and/or (c)		
England	351	410	24	55	7	529
Scotland	43	44	7	4	—	55
Wales	15	8	2	1	—	11
Total	409	462	33	60	7	562

#### The criteria (a), (b), and (c) referred to are

- That he has held hospital or other appointments affording special opportunities for acquiring special skill and experience of the kind required for the performance of the service rendered and has had actual recent practice in performing the service rendered or services of a similar character.
- That he has had special academic or post graduate study of a subject which comprises the service rendered and has had a recent practice as aforesaid.
- That he is generally recognized by other practitioners in the area as having special proficiency and experience in a subject which comprises the service rendered.

#### Payment of Expenses for Interviews.

Several complaints have reached the Medical Secretariat from doctors who have been asked to travel long distances for interview in connexion with a sister's practice in private practice and to whom travelling expenses have not been offered. Experience shows that it is a very rare case for applicants who are invited to interview possible employers to arrange beforehand with regard to travelling expenses as it would be difficult to establish any legal claim in the absence of such written undertaking.

## British Medical Association.

DEPARTMENTAL COMMITTEE ON THE OPTICAL PRACTITIONERS  
(REGISTRATION) BILL.

## MEMORANDUM OF EVIDENCE SUBMITTED BY THE BRITISH MEDICAL ASSOCIATION

ORAL evidence in support of the Memorandum printed below was given by Dr R. Wallace Henry (Chairman of the Ophthalmic Committee), Mr N. Bishop Harman and the Medical Secretary, before the Departmental Committee on the Optical Practitioners (Registration) Bill on September 26th, 1927.

1 The British Medical Association is a voluntary organisation of the medical profession. Its membership now totals upwards of 33,000 and includes representatives of every form of medical practice. It is organised throughout the Empire in local units called Divisions and in combinations of Divisions called Branches. By means of this local machinery and with the help of its weekly organ, the "British Medical Journal," the Association is able to inform, and to collect the opinions of, the main body of the medical profession. Every year the Divisions of the Association send representatives to the Annual Meeting of the Representative Body, at which are discussed the various problems which affect the work of the medical profession. Matters of policy are determined by the Representative Body after full discussion and debate.

2 The policy of the Association (as expressed by the Representative Body of the Association) which has guided the Council in its deliberations, now submitted concerning the proposed State recognition of opticians, is as follows—

That any State recognition of sight testing by persons not possessed of a medical qualification would not be in the interests of the community, and ought to be opposed in the strongest possible manner.

3 The Council considers that the reference of persons for sight-testing to other than registered medical practitioners ought in no way to be encouraged by the State, because it believes that State recognition in the manner indicated in the Draft Bill would be contrary to the interests of public health.

4 The Association is cordially in favour of any measure which has the object of increasing the efficiency of opticians in their technical work of manufacturing and fitting lenses and spectacles and would support the registration of opticians who devote their services to the foregoing branches of optics, believing that such registration would secure efficient work and be in the interests of the public. But the Bill which the Departmental Committee is now considering proposes on the contrary to create a new class of persons with special privileges in connection with the testing of sight, the interpretation of which essentially requires medical skill. Persons registered under the proposed Bill would be endowed with the privileges by the State, would have the right to use after their names letters implying that they are recognised as being qualified to practise sight testing and to charge and recover fees for such practice and would also have the statutory right to give certificates relating to visual acuity or visual defects, which shall be recognised as admissible by any local or central authority or government department in any part of Great Britain. Any enactment conferring such privileges would in the opinion of the Association, be misleading and indeed dangerous to the public because it would convey the suggestion that persons thus recognised who have not had a complete medical and surgical training are competent to advise upon and treat all defects of vision irrespective of the cause of the defects, whether constitutional or otherwise. This is the view emphasised by the Departmental Committee on the Causation and Prevention of Blindness (consisting of seven laymen, four Government officials and three practising ophthalmic surgeons) in the following paragraphs of the report issued in September 1922—

272 It is agreed that the medical profession and the general public are greatly indebted to opticians for the more or less excellent work done by them both in devising and perfecting optical instruments and in the making of glasses for those who suffer from errors of refraction. This work demands both a high degree of skill and special training, and it is natural that opticians who have acquired this skill and undergone this training should demand some form of official recognition which shall differentiate them from others not so equipped.

Nevertheless, we are of opinion that it would be an undesirable and a positive danger to the public for Parliament to pass any measure which might convey the idea that an optician, who is a person qualified to provide glasses prescribed by medical men, is further himself competent to examine the eyes of patients and to prescribe glasses for the correction of errors of refraction.

273 Many opticians call themselves by such titles as 'ophthalmic opticians,' 'optologists,' etc., have dark rooms on their premises and practise both retinoscopy and ophthalmoscopy. The British Optical Association holds examinations which include papers on the pathology of the eye.

274 An optician who practises ophthalmoscopy, and who advises and prescribes glasses for clients who consult him directly, poses by implication as an expert in the detection and treatment of eye defects, and claims a degree of medical knowledge which he does not possess. There is only one place where ophthalmology can be learnt, that is at a hospital, and an optician may do positive harm by prescribing glasses for cases in which error of refraction is accompanied by some disease which he is incapable of detecting.

275 Doubtless, in uncomplicated cases of error of refraction a trained optician can frequently prescribe the appropriate spectacles. He is, however, attempting to do work for which his equipment is incomplete. By the very terms of his "diploma" the trained optician is prohibited the use of mydriatic drugs,\* which are very frequently necessary for the accurate determination of errors of refraction. These drugs may only be used by medical practitioners. Further, there are many instances in which an error of refraction is the concomitant of a pathological condition, such as ciliary spasm, glaucoma, retinal disease and so on, which the optician, through want of medical training, is incapable of recognising, and in which serious harm or even blindness may result from the failure to detect the presence of disease. There are cases in which an ophthalmic practitioner will for a time deliberately withhold glasses in order to secure rest for the eye. In such a case it has happened not seldom that the patient has subsequently consulted an optician who, prescribing glasses that have for a time improved the vision, has thereby defeated the object of the ophthalmic practitioner and perhaps done permanent harm to the patient's eyesight.

276 Even reputable opticians, who would not deliberately run such a risk, and who would refer to an ophthalmic practitioner any cases in which they had any suspicion of disease, are liable through lack of medical training, to fail to recognise diseased conditions. Unscrupulous persons who deliberately advertise themselves as competent to treat diseases of the eye are a far greater danger to the public. If such a Register is suggested by the above mentioned Sub Committee of the Technical Optics Committee were established it would probably be difficult to prevent such persons who might succeed in obtaining admission to the Register from posing and advertising themselves as experts competent to treat diseases of the eye. Most ophthalmic practitioners have had experience of the harm wrought by those who, though they have had no medical training, profess to treat eye diseases, and who often seek to enhance their reputation by charging exorbitant fees. Such men are even now a source of danger, and the public resort to them at their own risk. That danger would, in our view, be increased if an official State Register of Opticians were established and such men gained admission to it for the public would regard the Register as an official guarantee.

\* (Comment by B. M. F.)—It is understood that at the present time (1927) this prohibition is only applicable to the holders of diplomas issued by the Worshipful Company of Spectacle Makers.

† For the purposes of this report the term Ophthalmic Practitioner is used to include (1) those medical practitioners who confine their work to the special practice of ophthalmology (2) such other medical practitioners as by special training are competent to deal with ophthalmic cases.

that those whose names were included in it were competent not only to provide but to prescribe glasses and generally to deal with defects of vision from whatever cause arising.

2. For the above reason we are of opinion that it would be inadvisable in the interests of the public to establish a Register of Opticians such as has been suggested. The proper function of an optician is not to prescribe glasses but to provide them to the prescription of an ophthalmic practitioner and in official lists of Opticians would tend to mislead the public into thinking that registered opticians were competent to discharge functions which belong only to those who have had a medical training.

The following are the main reasons why the Association objects to any proposal to divorce examination and treatment of cases from medical and surgical practice—

(1) The eye is not a separate optical instrument but a living and inseparable portion of the human body and shares its diseases. No only are defects of vision frequently connected with conditions of local and general disease but the general health is frequently affected by ocular conditions and the meaning and nature of these in each case can only be properly determined and treated by persons who have received a medical and surgical training.

(2) The most exact objective test of the refraction of the eye is the mirror test or retinoscopy. This cannot properly be performed in many cases unless the accommodation is temporarily suspended by the use of drugs which dilate the pupil.

This is of special importance in dealing with children whose range of visual accommodation is so great as to render any mode of examination of the refraction of the eyes futile and possibly dangerous without the use of an efficient paralyzing drug. The Education Authorities who are responsible for the examination and treatment of eye defects in school children have recognized this and invariably their work is carried out by registered medical practitioners specially qualified in the connection. The use of drugs which paralyze temporarily the internal muscles of the eye may be fraught with serious consequences particularly in patients of middle and old age if they are administered by the untrained who have not had such medical and surgical training as will enable them to select suitable cases for treatment or one of the more serious of ocular diseases namely, glaucoma may be made acute or even caused and the sight totally lost by the administration of drugs which dilate the pupil.

(3) Failure of sight is often the first symptom of general disease requiring medical treatment. It has been said that one five per cent of eye cases show a serious organic disease. An investigation shows that this is an understatement of the real position. Figures which illustrate this point were collected 2½ years ago and more recently for the purpose of this Departmental Committee are given in Appendices A and B. The cases of internal disease are scattered throughout the whole number and commonly give no warning of their nature, the patient simply complaining of dimness of vision which leads to a request for glasses. As the correction of the error of refraction which commonly complicates these cases may materially improve vision the optician often considers that he has done all that is needed by giving glasses whereas the real root of the trouble remains undiscovered.

(4) Of the cases in which the error of refraction is the obvious feature it should be remarked that these are by no means all straightforward optical cases in which there as optical instruments independent of a human body may be dealt with by an optician with mechanical measuring instrument. Many of these are high myopia. A record of 7,000 private case papers shows that 180 between the ages of 20 and 60 years had three or more dioptres of error. Of these cases no less than 26 per cent showed serious conditions of eye strain or failure which require much more than optical treatment and amongst those engaged in close eye work no less than 27 per cent had breakdowns. The figures of that investigation were published widely in the United Kingdom and in the United States of America and so far there has been no challenge to the deductions drawn therefrom. A material or fact they have been so far accepted that material decision may have been based upon them. The inference to be drawn is that a great deal of medical attention is required in the cases of an eye which is to be cured. In addition to the above class of cases there are many cases in which in addition to the error which requires the provision of glasses inflammatory condition of the eye and its appendages are present which need medical and sometimes surgical treatment (see Appendix B).

(5) In a great number of young patients who complain of symptoms of eye strain or of headache there may be found only very small errors of refraction such as may be found in a large proportion or even the majority of the population and without causing any real trouble even in the case of work at benches or desks. To the optician there are cases for glasses to the doctor there are cases for wider investigation.

An illustrative of this point attention is directed to the ophthalmic returns concerning the workmen of Messrs. Pontreves and Messrs. Lever Bros. respectively. In the former where an optician is employed during the six months ending December 1920 333 visits were paid to the optician by 241 different persons and 404 fittings were supplied. In the case of Messrs. Lever Bros. where an ophthalmic surgeon is employed during the six months ending June 1921 14 different persons were seen by the ophthalmic surgeon. The total visits paid by that number was 647 and only 170 pairs of glasses were prescribed and 70 repaired.

To the doctor who does ophthalmic practice these young workers are subjects for close clinical investigation. He wants to know why there is this supersensitiveness and he is often able to discover probable causes of trouble and indicate to the private practitioner what is the line of treatment that is best likely to benefit the patient. Such treatment is by no means confined to the ordering of glasses or drugs; it must be general medical treatment entering into the details of the patient's life.

Advice of this kind cannot be given by opticians even if really skilled in their craft. It can only be given by a doctor with that experience of men and of health problems which the medical curriculum is designed to give. No training in a narrow groove can give this.

(6) In adult persons the results of wear and tear are often shown first in the eyes. Changes in the cornea in the iris in the reaction of the pupil in the lens in the vitreous and above all in the state of the vessels of the retina are so well known as an indication of ageing of the tissues and the disabilities that arise therefrom that their discovery and estimation are a necessary part of every medical examination which is designed to reveal the true state of the body of the patient. The extreme value of such an examination will be appreciated when it is realized that the eye is the only part of the body where the blood vessels and nerves can be actually seen while its close connection with the brain frequently renders it possible to recognize disease of that organ in its earliest stages.

This knowledge could not be expected from opticians unless indeed it was proposed to subject them to such a wide and lengthy curriculum that it would be to all intents and purposes co-extensive with the medical curriculum. If so it would be more an aqueous bath to them and to the public that they should become medically qualified.

(7) Although the number of cases in which known damage to the eyes as the result of ignorance on the part of the optician may be small although serious, yet experience shows that a very large percentage of those who are given glasses do not get the full benefit that they might reasonably be expected to obtain.

In the short-sighted over-correction of the error is common while in the long-sighted under-correction is usual the estimation of the correct amount of astigmatism and the setting of the cylinders for such correction are frequently at fault whilst defects of muscle balance are generally overlooked. The result is that the individual concerned is not obtaining full value for the money expended.

(8) Since it is known that the great majority of patients have some error of refraction and since opticians have only one means of treatment for all eye conditions (the provision of glasses) glasses are ordered sometimes unnecessarily while other and necessary remedial measures are neglected.

6 It is claimed by those who support the Draft Bill that there are not sufficient ophthalmologists in the country to undertake the work of sight testing. This statement under attack the suggestion of the Statutory treatment of school children in elementary schools but experience has since shown that the needs of the school children have been met adequately in this respect. It has been found advisable to insist that the school children's eyes shall be examined and if necessary corrected by an ophthalmologist. There would appear to be no good reason why the parents should not have the same advantage. If the State were to recognize the sight testing optician in the manner indicated in the Draft Bill the probability is that in practice all the

children would be examined under one standard and nearly all the parents under a standard quite different and inferior.

7 Under the National Health Insurance system many approved societies are able to give to their members an additional benefit in the shape of ophthalmic benefit, such benefit including the preliminary sight-testing operations, and the provision of my spectacles that may be necessary.

Some approved societies refer all their cases to ophthalmic surgeons for the necessary examination, whilst others, not being able to afford the ophthalmic surgeon for every case send their members to opticians, leaving it to the latter to say whether or not the case is one which should be seen by an ophthalmic surgeon.

State registration of the optician would result in the reference to the optician in the first instance of the great majority of those insured persons who are entitled to ophthalmic benefit, and, eventually, no doubt would lead to a large proportion of the community making use of the services of the optician rather than those of the ophthalmologist, and doing so in the full belief that they were consulting those fully qualified to advise in all conditions of sight and to furnish the necessary certificates.

8 In order to ascertain the number of medical practitioners who are able and willing to undertake the examination of the eyes of those who are entitled to this particular form of benefit under the National Health Insurance Acts, the Association has compiled a list of close on 900 practitioners spread all over the country.

There are, in addition, ophthalmic surgeons engaged in consulting and hospital work and a considerable number of school medical officers engaged either whole or part time in this work, who are not on the list.

The qualifications of the practitioners for this particular and specialist form of work are carefully scrutinised by an expert Committee of the Association, and each applicant must satisfy the Committee—

(a) That he has held hospital or other appointments affording special opportunities for acquiring special skill and experience of the kind required for the performance of the service rendered, and has had actual recent practice in performing the service rendered or services of a similar character or

(b) that he has had special academic or post-graduate study of a subject which comprises the service rendered, and has had actual recent practice as aforesaid, or

(c) that he is generally recognised by other practitioners in the area as having special proficiency and experience in a subject which comprises the service rendered.

It is confidently asserted that many more fully qualified persons would be found to undertake sight-testing examinations at fees within the means of the average person if they could be assured that sufficient work was likely to be forthcoming. This assurance cannot be given at the present time while unqualified persons are being freely employed not only by individual members of the public but by bodies which are using money partly provided by the State. State registration of the optician would have the effect of deterring medical practitioners from fitting themselves to undertake this particular form of special practice and of encouraging the practice of partly qualified persons. Consequently any dangers which exist at the moment through this work being carried out by those who have not the necessary medical qualifications would be materially increased.

#### APPENDIX A

Extract from book entitled "The Conjunctiva in Health and Disease, being a record of some research work, by N. Bishop Harman published in London by Baillière Tindall & Co. 1905 Chapter III headed Sociological Inquiry.

"The material for this enquiry has been obtained from four sources: 1. One of the clinics at the Moorfields Eye Hospital (i.e., the Royal London Ophthalmic Hospital). 2. The clinic at Moorfields is one of twelve bi-weekly clinics. It is held on Wednesdays and Saturdays, and is under the care of Mr. W. T. Holmes Spicer, to whom my thanks are due for his permission to utilise his case papers." The letter of the Moorfields clinic were examined for one year—1902. There were nearly 3,000 cases. The primary tables obtained by the examination of these cases papers are altogether too unwieldy to publish. The features of interest have been extracted, and are shown in a graphic manner as possible so that they may tell their tale with as little explanatory text as may be. (Then follows a statement of the manner in which the cases were grouped according to age: Infancy group—birth to 3 years. School age group—3 to 14. Young adult age group—15 to 30. Adult age group—31 to 55. Elders age group—all exceeding 56 years of age.

#### "SUMMARY OF CASES IN THE MOORFIELDS CLINIC, 1902"

	Cases	Per centage
Conjunctivitis simple, mucopurulent, follicular etc.	300	18.1
Purulent conjunctivitis	28	1.0
Angular conjunctivitis	44	1.6
Trachoma, acute 14, chronic 19	33	1.2
Blepharitis	111	4.0
Phlyctenulosis	56	2.0
Superficial Keratitis	135	4.9
Injuries	168	6.8
Refractions	1,442	52.3
Other diseases (of the eyes)	220	7.9
Total	2,707	100.0

The percentage of refraction cases to all cases in each group work out as: Infants, 12.4 school, 60, young adults, 52.4 adults, 51.9, elders, 29.1."

(Note—It should be noted that at this date school medical INSPECTION had been instituted, which at that time meant only the examination of the visual acuity of the children as shown by tests of reading Snellen's test cards. There was no organised school medical TREATMENT at school clinics, hence the high proportion of children attending the hospital for errors of refraction.

#### APPENDIX B

ANALYSES (COLLECTED 1927) OF A SERIES OF 100 CASES	
Practitioner 1—Analysis (collected 1927) of Series of 100 consecutive new cases	
High Myopia (over 5 D)	7—7
Defects of Muscle Balance	
Squint	10
High Esophoria	1
Exophoria and defects of Convergence	7
Hyperphoria	1
Paralysis of Recti Muscles	2—23
Surface Diseases	
Follicular Conjunctivitis	3
Conjunctivitis (Various Types)	16
Marginal Blepharitis	2
Corneal Ulcers	1
Nebulae	6
Conical Cornea	1—32
Injuries to Eye	2—2
Diseases of deeper parts of the eye	
Early Cataract	23
Advanced Cataract	3
Choroiditis	1
Senile changes of Choroid and/or Retina	9
Atrophy of Optic Nerve	1
Neuro-Retinitis	1
Retro Ocular Neuritis	2
Toxic Amblyopia	1
Optic Neuritis	1
Embolism of Retinal Artery	1
Thrombosis of Retinal Vein	1
Ptosis	9
Iritis	1
Glaucoma	1
Vitreous Opacities	7
Hemianopia	1
Retinitis	2
Proptosis	1—64
Diseases about the Eye	
Lachrymal Disease	11
Meibomian Cysts	3
Abscess of Eyelid	1
Entropion	1—16
Constitutional Diseases associated with Ocular Affections	
Heart Disease	3
High Blood Pressure	1
Diabetes	1
Nephritis	3
Disseminated Sclerosis	2
Lateral Sclerosis	1
Locomotor Ataxia	1
Syphilis	3
Diphtheria	1
Chorea	1
Epilepsy	1
Mumps	2
Influenza	2
Neurasthenia	2—22

Note—In the above series there were 35 cases including 15 who had Muscle Imbalance and High Myopia who had

no other defect. There were 102 who had some form of disease present which required local or general treatment apart from the prescription of glasses.

The difference between the total of above figures and 100 is occasioned by the fact that some cases were found to be suffering from more than one disease.

**Practitioner 2.—Findings (collected 1927) in 100 consecutive NEW eye patients examined privately.** Cases examined in regard to Blind Persons Act or Workmen's Compensation Acts are excluded from this list.

Errors of refraction of sufficient degree to require correcting glasses.

Other determining conditions found. (Note.—In many cases more than one defect was found and where each contributed to the disability of vision the error noted.)

1	Bad conditions of work	4
2	Congenital defects	5
	Strabismus	2
	Structural defect	2
	Cataract	1
3	High myopia (over 20)	10
4	Defects of muscle balance	27
	Squint	3
	Gross esophoria	3
	Gross exoph and defects of convergence	14
	Hyperphoria (2 very weak)	5
5	Surface diseases of eyes	15
	Follicular conjunctivitis	3
	Sty	1
	Trachoma (1)	1
	Blepharitis	1
	Corneal ulcers	3
	Episcleritis	2
6	Injuries to eye	5
	Birth	1
	Miscellaneous accidents	2
	Foreign bodies	2
7	Diseases within the eyes	37
	Uveitis	4
	Iritis	2
	Cyclitis	1
	Detached retina	1
	Glaucoma early	8
	advanced	2
	Cataract early	10
	advanced	1
	Central senile choroiditis	1
	Arterio-sclerosis	8
8	Inflammations about the eyes	3
	Orbital periorbitis	1
	Nasal disease	1
	Lacrimal disease	1
9	General conditions not included in foregoing	11
	Pyorrhoea	1
	Herpes ophthalmicus	1
	Cold	1
	Diabetes	1
	Syphilis	1
	Lic	1

**Practitioner 3.—100 consecutive cases (collected 1927) from my present notebook of private cases—**

Refraction	43 cases
Imbalance	10
Cataract	11
Tear passages	3
Blepharitis	4
Corneal affections	4
Glaucoma	1
Iritis	2
Vitreous Opacities	3
Retino-Choroiditis	3
Optic Atrophy	3 (including 2 cases of locomotor ataxia)
Atheroma of vessels	3
Tic	1
Colour Blindness	1
Herpes	1
Retrolbulbar Neuritis	2

100 cases

**Practitioner 4.—**Of 100 consecutive cases 46 were found to be pure errors of refraction with no complications—the remaining 54 were mostly cases with varying degrees of errors of refraction—some without but all showing additional defects either general or local.

**Practitioner 5.—**I am now able to give an analysis of 100 consecutive cases examined by me under O.B. scheme sent by Societies known by me to be sending all their claimants direct to an ophthalmic surgeon.

We have been told that 95 per cent of the O.B. cases are simple uncomplicated refractions that can be dealt with by my competent refractometer and that the Societies are waiting for us in referring such to us.

My figures show that with a liberal interpretation only 43 come under this category i.e. in the cases with reasonable error proper glasses might have been ordered by anyone treating the eye as a piece of mechanism.

Thirty-two others proved to be difficult refracton cases many of them demanding a cycloplegic or mydriatic to enable one to prescribe with any confidence or to desist from prescribing. This number includes several cases that had already had wrong glasses ordered by qualified opticians and also 11 cases in which the correct advice was to dispense with glasses altogether or to continue without a change.

The remaining 20 cases were altogether unsuitable for optical treatment being complicated including injury (3) early cataract (2) conjunctivitis (4) and one each of minor strabismus, neurasthenia, toxic amblyopia, cysts, vitreous hemorrhage, macula disease, quiet ecchymosis and meningitis.

**Practitioner 6.—**In 100 consecutive cases in my Hospital Clinic—

54 were errors of refraction alone  
46 showed additional defects.

**Practitioner 7.—**Details of 100 consecutive patients seen in private practice—

(1) Number of cases with error of refraction only 47  
(2) Number of cases with other defects 53

#### Details of Cases in Group 2

High myopia	3
Myopia (lenticular)	1
Detachment of retina	1
Convergent squint	4
? squint	2
Convergence insufficiency	1
Lacrimal mucocele	1
Blepharospasm	1
Vitreous hemorrhage	1
Conjunctivitis	6
Glaucoma	7
Perforating injury (recent)	1
(old)	1
Incipient cataract	5
Cataract senile	2
Anterior capsular	1
Nebulae	2
Interstitial keratitis	1
Superficial keratitis	1
Cyclitis	1
Results of iritis	1
Occlusion of puncta	1
Thrombosis of retinal vein from arterio-sclerosis	1
Retinitis (arterio-sclerotic)	1
Amblyopia (from squint)	1
Dental neuralgia	1
Constipation	1
Alcoholism	1
Frontal sinusitis	1
Hemianopia	1
	53

**Practitioner 8.—**I have taken a series of 100 unselected cases in private and find that 50 can be regarded as simple refraction and 50 had some other eye trouble varying in seriousness. At the hospital out of 100 consecutive cases omitting recidivists 43 were refractive only and 57 showed additional defects.

**Practitioner 9.—**I took 100 cards straight backward in my card index with the following result—

(1) those arising from errors of refraction alone 40  
(2) the rest (with or without errors of refraction) showing additional defects 60

**Practitioner 10.—**I find that in a complete series—not selected—or 100 cases there were 41 cases with errors of refraction alone the other 59 cases were those of patients with or without errors of refraction with additional defects.

**Practitioner 11.—**One hundred consecutive cases seen in private. In 51 cases the defect was merely an error of refraction with or without heterophoria. In 49 cases other eye defects were present with or without an error of refraction. In one case no ocular defect was discovered.

## Association Notices

## BRANCH AND DIVISION MEETINGS TO BE HELD

**CAMBRIDGE AND HUNTINGDON BRANCH**—A meeting of the Cambridge and Huntingdon Branch will be held at Addenbrooks' Hospital, Cambridge, to-day (Friday, November 4th) at 2.30 p.m. when papers will be read by Dr G S Haynes on three cases of oesophageal obstruction and by Mr W Gifford Nash, F.R.C.S., on some rare abdominal cases.

**DUNDEE BRANCH**—The annual business meeting of the Dundee Branch will be held in the Medical School, Dundee, at 8.30 p.m., on Thursday, November 10th.

**GLASGOW AND WEST OF SCOTLAND BRANCH Ayrshire Division**—A meeting of the Ayrshire Division will be held in the Infirmary, Kilmarnock, on Thursday, November 17th, at 3.30 p.m. A British Medical Association Lecture will be given by Professor D P D Wilkie (Edinburgh), entitled "Some aspects of gall bladder diseases," illustrated by lantern slides.

**GLOUCESTERSHIRE BRANCH**—The opening meeting of the session of the Gloucestershire Branch will be held at the General Hospital, Cheltenham, on Thursday, November 10th, at 6.15 p.m. There will be supper at the Cadogan Cafe after the meeting (5s each exclusive of wines). Agenda: Presidential address on a series of cases of gastric ulcer occurring in a small hospital.

**KENT BRANCH**—The quarterly meeting of the Kent Branch will be held in the Royal Bell Hotel, Bromley, on Thursday, November 10th, at 5 p.m. A British Medical Association Lecture will be given by Dr George A Allan (Glasgow), a member of the British Medical Association Special Subcommittee on Rheumatic Heart Disease in Children, on the early detection and supervision of rheumatic infection in children.

**KENT BRANCH TUNBRIDGE WELLS DIVISION**—A meeting of the Tunbridge Wells Division will be held at the General Hospital, Tunbridge Wells, on Tuesday, November 8th, at 8.30 p.m. Mr A H Neve (colonel for West Kent) will give an address on a colonel's difficulties. Reference will be made to the Colonels Amendment Act of 1926 and the report of the Lunacy Commission. Local members of the legal profession are also invited to this meeting.

**LANCASHIRE AND CHESHIRE BRANCH Hyde Division**—The following programme has been arranged by the Hyde Division for the session 1927-28:

- Nov 17th Dance in aid of Medical Charities in Hyde Town Hall 8.30 p.m. to 1.30 a.m.
- Dec 8th Address by Sir William Milligan, in Stalybridge Town Hall 8.30 p.m.
- Jan 20th Clinical Meeting in the Maternity and Child Welfare Centre Hyde 8.30 p.m.
- Feb 23rd Address by Dr A Corsar Sturrock in Dukinfield Town Town Hall 8.30 p.m.
- Mar 15th Presidential Address by Dr T B Williams, in Stalybridge Town Hall 8.30 p.m.
- May 17th Picnic
- June 14th Annual General Meeting in Hyde Town Hall 8.30 p.m.

A joint meeting with Stockport Division will take place at Stockport in July. Visitors from other Divisions will be welcomed at all meetings.

**METROPOLITAN COUNTIES BRANCH City Division**—A clinical meeting of the City Division conducted by Dr T H G Shore, will be held on Friday, November 11th, at 4.15 p.m., at the Metropolitan Hospital, Ter. The annual dinner of the Division will take place at the Tiverton Restaurant on Thursday, December 1st, at 7.45 p.m., when several eminent guests will be present, and there will be a good musical entertainment. Tickets (12s 6d) from the secretary.

**METROPOLITAN COUNTIES BRANCH HAMPSTEAD DIVISION**—A meeting of the Hampstead Division will be held at the Hampstead General Hospital on Thursday, November 10th, at 8.30 p.m. An address will be given by Mr F E Scrase (M.O.H. Hampstead), on lessons of the last small pox outbreak in Hampstead. Coffee.

**METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION**—A clinical meeting of the Lambeth and Southwark Division will be held at the Belgrave Hospital for Children, Clapham Road S.W., on Wednesday, November 9th, at 4 p.m. It will be conducted by Mr Sidney Boyd M.S., F.R.C.S.

**METROPOLITAN COUNTIES BRANCH MARYLEBONE DIVISION**—A meeting of the Marylebone Division will be held in the Council Chamber, British Medical Association House, Tavistock Square, on Wednesday, November 23rd, at 8.15 p.m. Agenda—Discussion: The relation of voluntary and municipal hospitals to pending legislation, to be opened by Dr Masterman. St. Giles Hospital. Cambridge. Speakers representing the views of private practitioners, voluntary hospital and municipal hospital staffs, Poor Law medical officers, medical officers of health, and members of hospital boards of management will take part. All members and non-members of the Association are welcomed.

**METROPOLITAN COUNTIES BRANCH ST PANCRAS DIVISION**—A meeting of the St Pancras Division will be held in the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, November 8th, at 9 p.m. Professor V H Mollam of the University of London will give an address on some experiments in malnutrition.

**METROPOLITAN COUNTIES BRANCH SOUTH WEST ESSEX DIVISION**—A meeting of the South West Essex Division will be held at the Wesleyan Schoolrooms, High Road, Leyton, on Tuesday, November 8th, at 3.30 p.m. Dr R M Bronte will read a paper on the medical witness. A reception and dance will be held in the Town Hall, Leyton, on Thursday, November 24th. All medical practitioners, whether members of the British Medical Association or not,

together with their friends, will be heartily welcome. The function will be in aid of medical charities. Tickets, 7s 6d single, 12s 6d double (lady and gentleman), can be obtained from the honorary secretary, or from members of the Executive Committee.

**METROPOLITAN COUNTIES BRANCH WILLESDEN DIVISION**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, N.W., on Wednesday, November 16th, at 9 p.m. Mr H S Souttar, F.R.C.S., will give an address on the rectum. The annual dinner of the Division will take place at the Criterion Restaurant, Piccadilly, S.W. on Sunday, November 20th, at 7 p.m. Tickets, 10s (excluding wine), can be obtained from Dr W Lock, 45, Church Road, N.W.10.

**MIDLAND BRANCH CHESTERFIELD DIVISION**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, November 11th, at 8.15 p.m. Mr George Wilkinson, F.R.C.S. surgeon to the ear and throat department, Chesterfield Royal Hospital, and lecturer on diseases of the ear and throat, Sheffield University, will read a paper on small but troublesome ailments of the ear and nose. Tea and coffee at 8 p.m.

**NORTHERN COUNTIES OF SCOTLAND BRANCH BANFF, MORAY AND NAIRN DIVISION**—A meeting of the Banff, Moray, and Nairn Division will be held at the Gordon Arms Hotel, Elgin, on Friday, November 18th, at 6 p.m., when Professor D Murray Lyon of the University of Edinburgh will deliver a British Medical Association Lecture on asthma, with special reference to its etiology and treatment. The lecture is open to non-members of the Association, who will be cordially welcomed. The annual dinner will be held at the same hotel at 8 p.m., tickets 8s 6d. Members proposing to be present are asked to notify the Divisional Secretary, Dr G Smith Sowden (St. Giles, Little Cross, Elgin) as early as possible, and also to state if they intend to bring guests.

**NORTH OF ENGLAND BRANCH STOCKTON DIVISION**—The following arrangements of meetings have been made:

- Nov 18th Dr E Farquhar Murray (Newcastle on Tyne) Still Birth
- Jan 27th Dr W H Dickinson (Newcastle on Tyne) The Diagnosis of Pulmonary Tuberculosis

Feb 24th Dr George Hall (Newcastle on Tyne) Infantile Paralysis  
The annual dinner of the Division will be held on December 1st. Particulars later.

**NORTH OF ENGLAND BRANCH SUNDERLAND DIVISION**—The annual address before the Sunderland Division will be given in the Masonic Room of the Palatine Hotel, Sunderland, on Thursday, November 10th, at 5 p.m., by Sir Norman Walker, and the subject will be "Dermatology—a retrospect, a survey, and a prospect." The annual dinner of the Division will be held in the Banqueting Hall of the Palatine Hotel the same evening at 7.15. Tickets, 10s 6d each (exclusive of wine). Application for tickets should be made at once to the honorary secretary, Dr R H Dix, 7, Otter Terrace, Sunderland. A dance in aid of the B.M.A. Charities Fund is being arranged for February, 1928.

**SOUTHERN BRANCH PORTSMOUTH DIVISION**—The second meeting of the session of the Portsmouth Division will be held on Thursday, November 10th, at the Queen's Hotel, Southsea, at 9.30 p.m., preceded by a supper at 9 o'clock. Mr Norman C Lako will speak on a "busman's holiday" in America. The cost of the supper is 3s 6d, including gratuities. Notice of intention to be present at the supper should be given to the honorary secretary, Dr I C H Gittings, 15, Baring Avenue, Southsea.

**SURREY BRANCH CROYDON DIVISION**—At the meeting of the Croydon Division to be held at the Croydon General Hospital on Wednesday, November 9th, at 4 p.m. Mr J S Bookless will give a lecture demonstration on the exophthalmos.

**SURREY BRANCH REICATE DIVISION**—A clinical meeting of the Reigate Division will be held at the East Surrey Hospital on Wednesday, November 9th, at 4 p.m. Cases will be shown by members of the staff.

**SUSSEX BRANCH CHICHESTER AND WORTHING DIVISION**—The autumn meeting of the Chichester and Worthing Division will be held at Waine's Hotel, Worthing, on Wednesday, November 16th, at 7 p.m. As on former occasions, the Division will entertain guests representative of the public authorities in the area. It is hoped that members will bring their wives and other guests. Members of neighbouring Divisions (Horsham, Brighton, etc.), with their wives and guests, are cordially invited. The price of the dinner ticket will be 10s 6d (exclusive of wines, but including all gratuities). No subscription will be asked for the entertainment of the official guests. Members are asked to make application to the honorary secretary, Dr Duncan D Mackintosh, St. Elmo, Victoria Road, Worthing, for their dinner tickets, enclosing remittance, before November 9th.

**WEST SOMERSET BRANCH TROWBRIDGE DIVISION**—The annual dinner of the Trowbridge Division will be held at the Angel Hotel, Cluppennham, on Wednesday, November 23rd, at 7.30 p.m. Mr G W Hey Groves will give an address after dinner. Tickets (exclusive of wines) 10s 6d. Members proposing to attend are asked to notify the honorary secretary, Dr A D Hamilton, Brook Cottage, Lacock, by November 18th.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH HEREFORD DIVISION**—The last of the series of six post-graduate lectures arranged under the auspices of the University of Birmingham will be given at the Herefordshire General Hospital by Mr Bickwith Whitehead on the menstrual function in health and disease, on Friday, November 11th, at 3.30 p.m.

**YORKSHIRE BRANCH HALIFAX DIVISION**—The annual dinner of the Halifax Division will be held at the White Swan Hotel on Thursday, November 17th, at 7.30 p.m.

**YORKSHIRE BRANCH ROTTERHAM DIVISION**—The annual dinner of the Rotherham Division will be held at the Crown Hotel, Pool on Friday, November 25th, at 7.15 for 7.30 p.m., tickets 12s.

## DIARY OF SOCIETIES AND LECTURES

## ROYAL SOCIETY OF MEDICINE

Section of Therapeutics—Tues 5 p.m. Dr R. D. Lawrence (a) An Insulin Resistant Case of Diabetes (b) Recovery from (?) Pituitary Diabetes after Pregnancy Dr F. Parkes Weber Artificial Cerebral Congestion against Sea sickness Dr J. H. Gaddum A Comparison of Thyroxin with some other Iodine Derivatives Other papers will be read

Section of Psychiatry—Tues, 8.30 p.m. Presidential Address by Dr R. L. Langdon Down Psychiatry and the Report of the Royal Commission Section of Surgery Subsection of Proctology—Wed 5.30 p.m. Discussion The Rectum by Radium to be opened by Sir C. ...

Section of Epilepsy and Paralysis—Maida Vale, W.9 8 p.m. Clinical Meeting at the Hospital for Epilepsy and Paralysis

Clinical Section—Fri 5 p.m. Cases Section of Ophthalmology—Fri, 8 p.m. Cases 8.30 p.m. Mr O. Gayer Morgan and Dr T. D. Howitt Diathermy in Iridocyclitis Dr P. H. Adams Congenital Cataract with Spontaneous Absorption of the Lens Mr Ernest Clarke and Mr Rayner Batten Drawings illustrating Toxic Haemorrhagic Relinitis

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East S.W.1—Tues and Thurs, 5 p.m., FitzPatrick Lectures by Dr Herbert R. Spencer The history of British Midwifery (1650-1800)

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields W.C.2—Thurs 5 p.m., Bradshaw Lecture by Sir Cuthbert Wallis Enlarged Prostate: A Review

BIOCHEMICAL SOCIETY National Institute for Medical Research, Hampstead N.W.3—Mon, 5 p.m. Communications—(i) W. Stephenson A Cell free Dehydrogenase obtained from Bacteria (ii) G. A. Harrison Cause of Andrewes Diazo Test for Uraemia (iii) W. Hadden and F. R. Henley Equalization of Alcoholic Fermentation (iv) W. J. Thorpe Histamine in Tissue Extracts (v) O. Rosenheim Fluorescence of Ergosterol (vi) M. G. Eggleston and P. Eggleston Phosphagen Demonstrations—(i) J. T. Irving A Simple Shaker for Light Objects (ii) O. Rosenheim and E. Schuster A New Colorimeter

HUNTERIAN SOCIETY, Cutlers Hall, E.C.—Mon 9 p.m. Discussion The legal Perils of the Doctor To be opened by Earl Russell, Dr James Neal Mr Rayner Goddard, Sir Herbert Waterhouse, and Dr Temple Grey

WILT KENT MEDICO CHIRURGICAL SOCIETY, Miller General Hospital, Greenwich S.E.10—Fri, 8.45 p.m. Dr E. Mipother Co-operation by the Profession in the Treatment of Mental Disorder

## POST GRADUATE COURSES AND LECTURES

FELLOWSHIP OF MEDICINE AND POST GRADUATE MEDICAL ASSOCIATION—Special Lecture at the Medical Society 11 Chandos Street W.1 Mon 5 p.m., Bleeding from the Nose and Throat open to the medical profession without fee. Royal London Ophthalmic Hospital City Road E.C.1 Special Demonstration, Wed 12 noon open to the medical profession without fee St Mary's Hospital Paddington W.2 Wed, 3 p.m., Special Demonstration free to the medical profession Cancer Hospital, Ilham Road S.W. ## THE EFFICIENCY OF THE NATIONAL INSURANCE MEDICAL SERVICE

ADDRESS BY DR H B BRACKENBURY TO APPROVED SOCIETY SECRETARIES

At a meeting of the Incorporated Association of Approved Society Secretaries, held in London on November 2nd Dr H B BRACKENBURY, Chairman of Council of the British Medical Association, delivered an address on 'The efficiency of the national insurance medical service'. Mr T P PRANCE, chairman of the London Centre of the Incorporated Association presided over an audience which included some of the most prominent figures in approved society organization.

Dr Brackenbury, who had been introduced as the 'proponent of the British Medical Association' and that he did not fill any such role that evening. He proposed to discuss, in a non-controversial spirit, some of the matters on which approved societies and the medical profession had to work together. He was taking it for granted that an insurance medical service was a good thing in itself although, of course, efficiency—the word used in his title—might equally characterize a thing bad in itself. By what standard, then, should the efficiency of the medical service be judged? Not, certainly, by the standard of an ideal medicine. Medicine, in its art and science was by no means ideal. It had many imperfections, there were many gaps in its knowledge, it included some survivals, good things in their time, but now outworn. In a word it was like every other sphere of art or life of similar width. The actual practice of medicine also, apart from the imperfections of the science or art in itself had not reached an ideal level. It was not to be expected that all those concerned would be always working at the highest pitch of efficiency. Allowance must be made for varieties of human nature and circumstance. Therefore the efficiency of the insurance medical service should not be measured by some ideal condition which did not in fact exist but by what was actually attained in comparable branches of the profession or in some cognate service. There were three branches of medical service with which the insurance medical service might rightly be compared—namely the work of specialists in hospital work (especially that of the out-patient department), and the private practice of the family doctor. Those who were working the insurance service on its

service should be equal to the standard set up in these other branches and in his own judgment the insurance medical service was as efficient as any of them.

Take the work of specialists. Here there was just as much variation in efficiency, knowledge and skill as in any other branch of the profession. There were specialists who were first class in every possible respect, and others with equal claims on paper whose work was not quite of the same order. Specialist work while it contained a great deal that was most excellent had an admixture that was less satisfactory owing to slightly less knowledge, competence or experience perhaps to minor defects of character or to various economic and other circumstances into which it was not necessary to go. The out-patient department of hospitals—which was in some cases though not in others comparable with the insurance medical service—was again a field in which a vast amount of good work was done but it had its faults and inadequacies, which must have come home to the present. He had known for instance patients who had been attending out-patient departments for years at regular intervals of a fortnight or a month and except on the first occasion had never had a medical examination. He was making no accusation against out-patient departments any more than against specialists but he remembered his own experience, many years ago, as resident medical officer in a special hospital in London. He remembered how particularly at evening sessions in the out-patient department the first few patients would be examined with the utmost interest and thoroughness, and then the porter would come in to say that there were a hundred others who must be seen that evening so that at a certain stage one began to do each patient less than justice though he trusted no serious injustice.

The private practice of the family doctor, again, offered a parallel to the insurance service. The great bulk of practitioners of this class were of a very high type, and did their work most conscientiously, but there were others who were rather less conscientious, for example, about accepting patients when their practice was already so busy that such patients were not likely to receive the full attention which every doctor wanted to give. There were differences between practitioners also in respect to knowledge to their acquaintance with modern discoveries in medicine and in other ways. In private practice, again, there were times of stress due to local epidemics when the most conscientious practitioner had to give less than the service he would desire to give to the individual patient. Judged by all these standards Dr Brackenbury believed that on the whole, the insurance medical service

was rather higher than the others in its general level of efficiency, though this, of course, was not capable of proof. He feared that the tendency was for those he was addressing to have brought to their attention the imperfections of the service rather than its excellencies. The work which in insurance doctor did over and above any legal requirement was not likely to reach the approved society official, whereas any lapse or delinquency was reported.

Dr Brackenbury passed on to consider any dangers inherent in the insurance medical service which tended to depreciate or hamper its efficiency or prevent its further development. He thought these came under two headings: a tendency to an over-regulation of the profession, and a tendency to its commercialization. With regard to the first, while he recognized the need for all sorts of regulations and rules, he thought there was a danger that this might be carried too far. The doctor's job was to deal with the patient in front of him. His first concern was to help that man or woman in every way possible, even perhaps in ways not strictly medical. The more he was distracted from his job the worse would that job be done, so that the things the doctor had to do apart from that job were more or less troublesome or annoying, though as a rule he took them philosophically. Dr Brackenbury instanced what took place at a birth. The doctor's job was to look after the mother and infant, but he also had to find out whether the birth had been notified by the father or the nurse, and, if not, it was his business to notify, he had perhaps to deal with a maternity claim for the mother, should something be wrong with the infant's eyes he had not only to attend to it, but to notify the fact to another authority, and should the mother develop a rise of temperature, even a moderate rise, the cause for which might be quite normal, such as the commencing of the breasts to function, he must make another notification, perhaps again to a different authority. All these things might be necessary, but they were no essential part of the doctor's primary object. He did not do them automatically. He had to stay to consider to which authority a particular notification should be sent, or whether the time allowed for making the notification had elapsed, and all this detracted to some extent from his fundamental service.

To this, in the insurance medical service, were to be added a whole lot of other regulations. He agreed that, if a man took ordinary care, he was not likely often to find himself in any difficulty. When addressing senior students about to enter the practice of the profession the speaker had found them rather oppressed by the pitfalls of insurance practice from this point of view, and he had reassured them by pointing out that there were laws in this country against murder, yet though every one of us was a potential murderer, no man of sound mind spent his time thinking about those laws and how he could manage to avoid transgressing them. The insurance doctor could work for quite a long time without any particular attention to the exact bearing of the terms of service, but every now and then the very thing happened to provide against which the regulations were framed, and in order to act properly in that contingency he would find it necessary to fill up certain forms, send in certain claims, and so forth. The speaker's submission was that there was a real danger that things of this kind, trifling in themselves, but engaging the doctor's thoughts even when he was not actually doing anything in connexion with them, might become too onerous, and so detract from the efficiency of the actual job. If, therefore, in certification rules for example, some things could be set out in general terms instead of with meticulous precision, so much the better. He mentioned as an example the convalescent certificate, in which more elasticity might well be allowed. Another matter was the necessity for recording all attendances and visits on the cards. There were certain cases, no doubt, in which it was desirable that such records should be kept, also there were certain doctors with the statistical habit of mind who delighted in doing this kind of thing, but on the whole this particular requirement became a nuisance against which the Panel Conference usually protested, and in extremely chronic cases, where a patient simply came periodically for his certificate, the practice of searching out that card and making the entry was far short of an absurdity.

Finally, there was a tendency to commercialization—not exactly a suitable word to cover what he had in mind—to be combated. If this was allowed to spread to any large extent it would ruin the medical profession as a profession. He instanced four ways in which, he thought, the danger arose. The first was with regard to doctors' lists. There was a danger in having too large lists. Allowing for the exceptional case (and, of course, in prescribing an absolute maximum this always had to be allowed for), he believed the present maximum too high for the ordinary circumstances of practice. It was true that there were practitioners who were extraordinarily quick-minded, methodical, and energetic, who laid themselves out to deal with large numbers of insured persons and practically no others. These men could manage a list of 2,500. But there were other doctors, not quite of that type, and who had other work to do, for whom, he thought, that number was too large. Nor was he specially concerned for the exceptional case, because he deprecated the devotion of a practitioner almost exclusively to insurance work. A man was likely to be a better doctor if he did not confine himself entirely to one type of practice, and did not cut away, say, that very important class of patients comprising poisons under 16 years of age.

Another direction in which commercialization appeared was in connexion with lock-up surgeries. He admitted that there were circumstances in which a lock-up surgery could not be helped, and was, indeed, a boon to patients. But the tendency to lock-up surgeries was in most cases undesirable. He did not think that any family doctor could really do his full duty to his patients unless he lived among them and knew their circumstances and their lives. Again, there was the question of assistants. The taking of an assistant was in itself an eminently desirable thing. It was an excellent way in which the newly qualified practitioner might be introduced into the profession. It must not be imagined that a doctor's request for permission to employ an assistant, when he had not got the maximum number of insured persons on his list, was due to some sinister motive—quite the contrary, but Dr Brackenbury agreed that if a man had a lock-up surgery and a small list, and asked for an assistant, who's everything might be quite straightforward, inquiries ought to be made, lest there be any intention to exploit the lock-up surgery as a branch practice for the mere purpose of reaping an income over and above what had to be paid to the assistant to do the work. Following from this there were cases here and there in which a doctor or firm of doctors, or even a commercial company, ran practices for purely business purposes. A man might start a practice, put in a cheap assistant, get a number of insured persons and others attached, advertise the practice by such methods as were available without running the risk of disciplinary action, and presently sell the practice to the assistant, and he might repeat this operation in various places, himself running the whole thing as a business proposition, living upon the creation of practices and the selling of them at an appropriate moment. It was largely because of the facilities offered by the Insurance Act that that insidious sort of commercialization was made more easy, and it was a thing which all who had the interests of the medical profession at heart, and the interests of the insurance medical service, must endeavour to stop.

In proposing a vote of thanks to Dr Brackenbury, Mr CAVEN, general secretary of the association, said that Dr Brackenbury, more than any man, was responsible for the better atmosphere which now existed between approved societies and the medical profession. It was he who presided over a series of conferences, held at the old British Medical Association House, between representatives of the sides, and although some on the approved society side entered those conferences with the fixed intention of fighting the medical profession, they found their feelings blunted with Dr Brackenbury in the chair. If anyone came that evening intending to criticize, Dr Brackenbury's candour must have disarmed them, but the speaker suggested that it was now the turn of the British Medical Association to invite a layman, representative of approved societies, to address a gathering of insurance practitioners.

## British Medical Association

## CURRENT NOTES

British Medical Bureau (The Scholastic Clerical) and  
Medical Association Ltd)

In our last issue (p. 839) the attention of members was directed to the institution of the British Medical Bureau under an agreement with the old established Scholastic Clerical, and Medical Association Ltd which since 1820, has been providing for the wants of medical practitioners by its transfer of practices and provision of partners. Practitioners and locumtenents are concerned with great acceptance to the profession. Its new name of British Medical Bureau is intended to emphasize the relations which it now has with the British Medical Association, and the fact that in future it will do its work in accordance with the general policy of the British Medical Association. It will be noted that members of the Association will have the advantage of a reduced scale of charges. The Association has always been able confidently to recommend the institution to its members as a result of much experience of its straightforward dealing and can now do so with even more confidence than before in view of the new relations that exist between the two bodies. The negotiations have been conducted by the Council of the British Medical Association with the approval of the Representative Body. An advertisement will be found at page 47 of this issue. All correspondence should be addressed to Mr. A. V. Squire, General Manager, British Medical Bureau, 12 Stratford Place, Oxford Street, W.1 (telegraphic address "Triform Wendo, London", telephone, Mariav 1732 and 1733).

## Some Work of the Committees.

During the past fortnight the Psycho Analysis Committee and a number of subcommittees have held meetings. The work of the Psycho Analysis Committee while it entails frequent meetings does not lend itself to occasional commitment. Among the subcommittees two the Prescribing Subcommittee and the Hospitals Subcommittee, have been specially appointed this session to consider particular problems. The Prescribing Subcommittee was appointed by the Insurance Acts Committee to consider the steps could most profitably be taken to draw the attention of insurance practitioners to the necessity for care in prescribing. At its first meeting on October 26th it is approved for submission to the parent committee a circular dealing with this subject addressed to Panel Committees, and a memorandum on prescribing for issue to individual insurance practitioners. The Hospitals Subcommittee has the task of "considering the co-ordination of hospital provision, in view of the letter of January 1st 1927, sent by the British Hospitals Association to the Ministry of Health and the reply of the Ministry of Health thereto, dated February 15th 1927," together with certain other matters bearing upon the hospital policy of the Association. Among these is the question of the formulation of a middle class hospital policy. The Propaganda Subcommittee on November 2nd made its final preliminary review of the work accomplished during the past and plans for the present session. The Library Subcommittee has under consideration the development of the Association's Library and the possibility of some scheme of co-operation with other medical libraries in London. The work of the Joint Research Subcommittee is making good progress. At a meeting on October 23rd the subcommittee completed its scheme for the conduct of investigations into the treatment of varicose ulceration and gastro-enterostomy and decided upon the terms of the questions to be addressed to practitioners engaging in the inquiries. The questions will be submitted for the approval of the Science Committee at its next meeting. It is hoped that the two investigations may be set on foot very shortly, when full particulars will be published in the Journal. The subcommittee has been fortunate in securing the help of Dr. A. P. Luff who will assist in the collation and evaluation of the data obtained and in the general conduct of the research. The Maternity and Child Welfare Subcommittee on November

3rd considered the ante-natal record form issued by the Central Midwives Board to its midwives and decided to represent to the Ministry of Health that it is undesirable to assign to midwives duties which can only be properly carried out by duly qualified medical practitioners. The subcommittee also had before it a resolution of the Representative Body with regard to ante-natal work and proposed at its next meeting to consider a scheme that has been formulated in Kent for the provision of ante-natal examinations for all expectant mothers. On consideration of a project put forward by the Association of Infant Welfare and Maternity Centres, for the establishment of pivoting centres for better class mothers it was decided to invite a representative of that association to meet the subcommittee and discuss the matter.

## Association Notices

## BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH** NORTON AND TAMWORTH DIVISION.—An ordinary meeting of the Norton and Tamworth Division will be held at the Tamworth General Hospital on Thursday November 17th at 3.30 p.m. Agenda. Inaugural address by the chairman Dr. Ashworth. A special meeting will then be held to consider Dr. Jones's report as representative in the Representative Body and the question of adopting new Rules of Organization.

**DOVER AND WEST HAST BRANCH** BOURNEMOUTH DIVISION.—A general meeting of the Bournemouth Division will be held in conjunction with the Bournemouth Legal Society by their kind invitation on Monday November 21st at the Alexandra Hall, St. Peter's Road, Bournemouth at 8 p.m. when a discussion on "Should communications to a medical man be privileged in legal proceedings both civil and criminal" will take place. The two chief speakers for the legal society will be Mr. E. W. Marshall, Barrister and Mr. W. E. D. Angibau and for the Division Dr. E. K. Lo Fleming and Dr. G. H. Morse. The subject will then be open for general discussion and it is hoped that as many members as possible will be present and that a large number will take part in the debate. The legal society are kindly providing coffee. Members wishing to compete in the Treaurrer's Cup golf competition are asked to enter their names stating their club handicap to Dr. Graham-Jones, Streteford Court, Park Lane by Saturday November 19th. There will be an entrance fee of 2s. 6d. towards a prize for the winner of the Division stage of the competition.

**EAST YORK AND NORTH LINCOLN BRANCH** EAST YORK DIVISION.—The East Yorkshire Division will hold a joint meeting with the Hull and District Society of Dental Surgeons for a discussion on focal sepsis in Hammond's Cafe on Friday November 18th at 8.5 p.m. The meeting will be preceded by an informal supper (price 3s.) commencing at 8 o'clock.

**FIFE BRANCH**—A clinical meeting of the Fife Branch will be held in the Maternity Home, Town and Crescent, Kirkcaldy on Wednesday November 23rd at 3.30 p.m. Mr. Frank E. Jardine (Edinburgh) will address the meeting on the use of behotherapy in surgical cases.

**GLASGOW AND WEST OF SCOTLAND BRANCH** ABERDEEN DIVISION.—A meeting of the Aberdeenshire Division will be held in the Infirmary, Kilmarnock on Thursday November 17th at 3.30 p.m. A British Medical Association Lecture will be given by Professor D. P. D. Wilkie (Edinburgh) entitled "Some aspects of gall bladder disease" illustrated by lantern slides.

**KENT BRANCH** ISLE OF THAMES DIVISION.—A meeting of the Isle of Thanet Division will be held at the Queen's Highcliffe Hotel, Cliftonville on Thursday November 24th at 8.45 p.m. when Dr. H. Raven will take the chair. Paper by Dr. H. Warwick Brown on nervous exhaustion especially with reference to auto-intoxication as a factor in its production.

**LANCA SHIRE AND CHESHIRE BRANCH** HYDE DIVISION.—The dance arranged by the Hyde Division in aid of medical charities will take place in the Hyde Town Hall on Thursday November 17th, 8.30 p.m. to 1.30 a.m.

**METROPOLITAN COUNTIES BRANCH** CITY DIVISION.—A clinical meeting of the City Division conducted by Dr. T. H. G. Shore will be held to-day (Friday November 11th) at 4.15 p.m. at the Metropolitan Hospital. The annual dinner of the Division will take place at the Trocadero Restaurant on Thursday December 1st at 7.45 p.m. when several eminent guests will be present and there will be a good musical entertainment. Tickets (12s. 6d.) from the secretary.

**METROPOLITAN COUNTIES BRANCH** HAMPTON DIVISION.—The following programme of meetings for the session 1927-28 has been arranged:

Dec 5th Dr. A. E. Hayward Pinch Radium Therapy  
Jan 12th Dr. T. J. Bennett The Treatment of Gastric Ulcer  
Feb 5th Dr. S. H. Bennett Copeland F.R.S. "Esophageal Cancer"  
Mar 12th Dr. G. A. Sturtevant The Heart in Acute Infections  
May 12th Division on the Annual Report of Council  
Jun 1st Annual Meeting of the Division Election of Officers and Executive Committee  
July 12th Discussion on the Supplementary Report of Council on the matters to be presented at the Annual Representative Meeting

All meetings unless otherwise announced will be held at the Hampton General Hospital at 8.30 p.m. Members are invited to honor or to report cases of interest at any of the meetings.

**METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION**—A meeting of the Lambeth and Southwark Division will be held at the Lambeth Carlton Club, Coldharbour Lane, on Tuesday, November 22nd, at 9 p.m. Agenda: Report by Dr E H Jebus on Annual Representative Meeting at Edinburgh, paper by Mr E P Brockman (Orthopaedic Department, St Thomas's Hospital) on common disabilities of the foot and ankle.

**METROPOLITAN COUNTIES BRANCH LEWISHAM DIVISION**—A meeting of the Lewisham Division will be held on Tuesday, November 15th, at 8.45 p.m. at the Town Hall, Catford, S.E. 6, when Mr Charles Beney, aural surgeon, St John's Hospital, Lewisham, will give an address entitled "The urgency of the discharging ear," and will show clinical cases.

**METROPOLITAN COUNTIES BRANCH MARYLEBONE DIVISION**—A meeting of the Marylebone Division will be held in the Council Chamber, British Medical Association House, Tavistock Square, on Wednesday, November 23rd, at 8.15 p.m. Agenda—Discussion: The relation of voluntary and municipal hospitals to pending legislation, to be opened by Dr Masterman, St Giles Hospital, Cumberwell. Speakers representing the views of private practitioners, voluntary hospital and municipal hospital staffs, Poor Law medical officers, medical officers of health, and members of hospital boards of management will take part. All members and non-members of the Association are welcomed.

**METROPOLITAN COUNTIES BRANCH SOUTH WEST ESSEX DIVISION**—The South-West Essex Division will hold a reception and dance in the Town Hall, Leyton, on Thursday, November 24th. All medical practitioners, whether members of the British Medical Association or not, together with their friends, will be heartily welcome. The function will be in aid of medical charities. Tickets, 7s 6d single, 12s 6d double (lady and gentleman), can be obtained from the honorary secretary, or from members of the Executive Committee.

**METROPOLITAN COUNTIES BRANCH TOWER HAMLETS DIVISION**—A meeting of the Tower Hamlets Division will be held at the British Red Cross Society's Clinic at 126, Brunswick Road, Poplar, E. 14, on Wednesday, November 16th, at 4.15 p.m., when Dr J. Sainsbury will give a lecture demonstration and exhibit clinical cases. Tea will be served at 4 p.m.

**METROPOLITAN COUNTIES BRANCH WE TWINSTER AND HOLBORN DIVISION**—A meeting of the Westminster and Holborn Division will be held at Romano's Restaurant, Strand, W.C., on Thursday, November 24th, at 8.15 p.m., preceded by a dinner at 7.30. Sir Crisp English will open a discussion on "Is it desirable that each member of the community should have an annual medical overhaul?"

**METROPOLITAN COUNTIES BRANCH WILLESDEEN DIVISION**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Hailesden Road, N.W., on Wednesday, November 16th, at 9 p.m. Mr H. S. Souttar will give an address on the rectum. The annual dinner of the Division will take place at the Criterion Restaurant, Piccadilly S.W., on Sunday, November 20th, at 7 p.m. Tickets, 10s (excluding wine), can be obtained from Dr W. Lock, 45, Church Road, N.W. 10.

**MIDLAND BRANCH HOLLAND DIVISION**—A meeting of the Holland Division will be held at the Y.M.C.A. Institute, Spalding, on Friday, November 18th, at 3 p.m., when an address will be given by Dr H. Bell Tawse (Nottingham), on some difficulties of the general practitioner with ear, nose, and throat cases, illustrated by lantern slides. Members of the neighbouring Division are cordially invited. The following further meetings of the Division have been arranged:

December Dr A. P. Beddard, physician to Guy's Hospital  
January B.M.A. Lecture by Sir Humphry Rolleston, Bart.  
February Dr J. Wilkie Scott (Nottingham)

**NORFOLK BRANCH**—A meeting of the Norfolk Branch will be held at the Norfolk and Norwich Hospital, on Wednesday, November 30th, at 3.15 p.m., when Dr H. J. Stirling will read a paper on the diagnosis and treatment of hyperthyroidism (illustrated by lantern slides).

**NORFOLK BRANCH EAST NORFOLK DIVISION**—A general meeting of the East Norfolk Division will be held in the Medical Library, Norwich, on Wednesday, November 16th, at 3.15 p.m. Agenda: Report of Representative to Annual Representative Meeting, Edinburgh; Charities Fund; resignation of honorary secretary; election of honorary secretary. As the honorary secretary is leaving the Division he would be glad of as large an attendance as possible to enable him to see personally as many members as possible before his departure.

**NORTHERN COUNTIES OF SCOTLAND BRANCH BANFF, MORAY AND NAIRN DIVISION**—A meeting of the Banff, Moray, and Nairn Division will be held at the Gordon Arms Hotel, Elgin, on Friday, November 18th, at 6 p.m., when Professor D. Murray Lyon, of the University of Edinburgh, will deliver a British Medical Association Lecture on asthma, with special reference to its etiology and treatment. The lecture is open to non-members of the Association, who will be cordially welcomed. The annual dinner will be held at the same hotel at 8 p.m., tickets 8s 6d. Members proposing to be present are asked to notify the Divisional Secretary, Dr G. Smith Sowden (St Giles, Little Cross, Elgin) as early as possible, and also to state if they intend to bring guests.

**NORTH OF ENGLAND BRANCH BISHOP AUCKLAND DIVISION**—A meeting of the Bishop Auckland Division will be held at the Cottage Hospital, Bishop Auckland, on Friday, November 25th, at 8 p.m. Dr D. Wells Patterson will give a lecture on the earliest signs of disease.

**NORTH OF ENGLAND BRANCH DARLINGTON DIVISION**—A meeting of the Darlington Division will be held at the Hospital, Darlington, on Thursday, November 17th, at 8.30 p.m., when an address will

be given by Professor Hugh Macleod on the subject of the medical treatment of gastric and duodenal ulcer. Members from neighbouring Divisions will be welcome.

**NORTH OF ENGLAND BRANCH NORTH NORTHUMBERLAND DIVISION**—The annual dinner of the North Northumberland Division is to be held on Thursday, November 17th, in the Plough Hotel, Alnwick, at 6.30 p.m. for 7 p.m. when the chief guests will be Professor Stuart MacDonald and Dr Frank Beaton of Ashington. Price of tickets (exclusive of wines) 10s 6d.

**NORTH OF ENGLAND BRANCH STOCKTON DIVISION**—At the meeting of the Stockton Division to be held on Friday, November 18th, Dr E. Laing Murray (Newcastle on Tyne) will read a paper on stillbirth.

**SOUTHERN BRANCH PORTSMOUTH DIVISION**—A clinical meeting of the Portsmouth Division will be held at the Royal Portsmouth Hospital (Out-patient Department), on Thursday, November 24th, 3 p.m., examination of patients, 3.45, tea by invitation of the medical and surgical staff of the hospital, 4 o'clock, discussion (in board room of hospital). Brief notes of cases should be sent to Mr C. A. Scott Ridout, clinical secretary, not later than first post Monday, November 14th, so as to be included in the agenda. A dance in aid of the B.M.A. Charities Fund is being arranged for February, 1928.

**SOUTHERN BRANCH WINCHESTER DIVISION**—The next meeting of the Winchester Division will be held at the Royal Hants County Hospital on Wednesday, November 16th, at 3 p.m., at which Mr B. H. Paddock will read a paper on the treatment of otitis media in children. The chairman will provide tea about 3.30. Will members who intend to be present kindly notify the honorary secretary, Dr W. A. Bruce Young, Everthorpe, Winchester, not later than Tuesday morning, November 15th.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH SWANSEA DIVISION**—A meeting of the Swansea Division will be held at the General Hospital, Swansea, on Thursday, November 24th, at 8.15 p.m. Discussion: Acute intestinal obstruction to be opened by Dr D. E. Evans (medical), Dr A. F. Sladden (pathological), and Mr Howell Gabb (surgical).

**SOUTH WESTERN BRANCH**—An autumn intermediate meeting of the South Western Branch will be held in the Library of the Royal Devon and Exeter Hospital, Exeter, on Tuesday, November 22nd, at 3.15 p.m. Lecture by Dr James Menell. The use and abuse of bone-setting and osteopathy. Tea will be provided.

**SURREY BRANCH CROYDON DIVISION**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Tuesday, November 15th, at 8.30 p.m. Dr S. F. St. J. Steadman will give a lantern lecture on cancer.

**SUSSEX BRANCH CHICHESTER AND WORTHING DIVISION**—The autumn meeting of the Chichester and Worthing Division will be held at Warne's Hotel, Worthing, on Wednesday, November 16th, at 7 p.m. As on former occasions the Division will entertain guests representative of the public authorities in the area. It is hoped that members will bring their wives and other guests. Members of neighbouring Divisions (Horsham, Brighton, etc.), with their wives and guests, are cordially invited. The price of the dinner ticket will be 10s 6d (exclusive of wines, but including all gratuities). No subscription will be asked for the entertainment of the official guests. Members are asked to make application to the honorary secretary, Dr Duncan D. Macintosh, St. Elmo, Victoria Road, Worthing, for their dinner tickets, enclosing remittance.

**SUSSEX BRANCH HASTINGS DIVISION**—The annual dance arranged by the Hastings Division will take place on Friday, December 2nd, at the Albany Hotel, Hastings. Tickets, 7s 6d (including buffet supper). Members are requested to notify the honorary secretary, Dr T. Reed, Hawkswood London Road St. Leonards-on-Sea, as early as possible how many tickets they will require.

**WEST SOMERSET BRANCH TROWBRIDGE DIVISION**—The annual dinner of the Trowbridge Division will be held at the Angel Hotel, Chippenham, on Wednesday, November 23rd, at 7.30 p.m. Mr E. W. Hey Groves will give an address after dinner. Tickets (exclusive of wines) 10s 6d. Members proposing to attend are asked to notify the honorary secretary, Dr A. D. Hamilton, Biggo Cottage, Lacock, by November 18th.

**WILTSHIRE BRANCH**—A meeting of the Wiltshire Branch will be held at the County Mental Hospital, Devizes, on Wednesday, November 16th, at 3 p.m., when Mr D. A. Mitchell (Bath) will read a paper entitled "Ante natal work in general practice." It is hoped that all members of the Branch will make an effort to be present.

**YORKSHIRE BRANCH BRADFORD DIVISION**—The following programme of meetings has been arranged for the session 1927-28:

Nov 23rd Annual Dinner  
Dec 13th Combined Clinical Meeting with Medical-Chirurgical Society  
Jan 26th Annual Dance and Supper  
Feb 22nd or 23rd British Medical Association Lecture  
Mar 21st Smoking Concert  
April 18th Visit from Member of Headquarters Staff

**YORKSHIRE BRANCH HALIFAX DIVISION**—The annual dinner of the Halifax Division will be held at the White Swan Hotel, Halifax, on Thursday, November 17th at 8 p.m. Tickets price 10s 6d. Applications for tickets for members and guests, who need not be members of the medical profession should be made immediately to Dr W. O. Lodge, 3, Heath Hall, Halifax.

**YORKSHIRE BRANCH ROTHERHAM DIVISION**—The annual dinner of the Rotherham Division will be held at the Crown Hotel Rotherham, on Friday, November 25th at 7.15 for 7.30 p.m. tickets 12s 6d (exclusive of wines). Members proposing to attend are asked to notify the honorary secretary Dr W. S. Wildman, Eastwood Ho., Rotherham, by November 20th, stating the number and names of guests. It will facilitate arrangements if tickets are paid for in advance.

**YORKSHIRE BRANCH SHEFFIELD DIVISION**—A general meeting of the Sheffield Division will be held on Friday, December 9th, at the University, Sheffield, at 8.30 p.m. when a British Medical Association Lecture will be delivered by Professor H. Beaumont Whitehouse on practical applications of recent views on the menstrual function.

#### SPA PRACTITIONERS' GROUP

The formation of a Spa Practitioners' Group has been sanctioned by the Council of the Association. Membership of the group is open to the members of the Association who regularly prescribe the mineral waters or baths of the spas in which they reside and the members of the Association who are on the staff of a hospital or clinic where the use of the local mineral waters is part of the routine treatment. A meeting of those eligible for membership will be held to inaugurate the group at the British Medical Association House, Tavistock Square, London W.G.1 on Wednesday, November 23rd, at 12.30 p.m.

### Meetings of Branches and Divisions

#### DORSET AND WEST HANTS BRANCH WEST DORSET DIVISION

A meeting of the West Dorset Division was held at the Weymouth District Hospital on October 18th. Mr. Gerard-Pearse showed a case of a small girl admitted to the hospital almost moribund and suffering from acute streptococcal peritonitis. The abdomen was opened and drained and the appendix which appeared normal removed. The girl was now fit and well.

Dr. Roderic Hall, who displayed some interesting radiographs of the chest in cases of early pulmonary tuberculosis, pointed out the distinctive diagnostic features.

After refreshments had been served, Dr. John Carswell (Bournemouth) read a paper entitled "Language and mind: being reflections suggested by Sir Henry Head's treatise *Aphasia and the Immense Importance of Head's Work*". He suggested that it would have a great effect on the future of medicine and that it deserved and would repay careful study.

The chairman, Dr. O'Leary, thanked Dr. Carswell for his excellent paper and for travelling so far to deliver it.

#### EAST YORK AND NORTH LINCOLN BRANCH EAST YORK DIVISION

The first seasonal meeting of the East York Division took the form of a reception at Field's Restaurant, Hull. Refreshments were provided also an attractive programme of music and recitation. A display of local medical antiquities and local medical literature attracted considerable attention from the guests.

Mr. Thomas Sheppard gave a very entertaining address on the old Hull Medical School.

The ex-chairman, Dr. Ritchie Rodger, in presenting the chairman's badge to Dr. Macdonald Macdonald, the present chairman said that it was only Dr. Macdonald's retiring nature which had prevented him being chairman previously. Dr. Macdonald, thanking Dr. Rodger on behalf of the Division for the gift, remarked that a badge was originally the mark of a servant as distinguished from a master in that spirit he would wear it during his term of office as a servant of the Division.

The Ritchie Rodger golf cup was then presented to Mrs. McInnes in the absence of Dr. McInnes, the winner. Mrs. McInnes expressed thanks on behalf of her husband.

There was a large attendance at the reception to which all the medical practitioners of the area had been invited with their wives and a very enjoyable evening was spent.

#### KENT BRANCH DOVER DIVISION

A clinical meeting of the Dover Division was held at the Victoria War Memorial Hospital, Deal, on October 21st. Dr. Hall, howed a patient on whom a sleeve resection of the stomach had been performed for a growth which on microscopic examination by three pathologists had proved to be sarcoma. He also showed a case of partial gastrectomy for carcinoma. Dr. Birdwood showed a case of longobian leucemia, a case of achiliaia of the oesophagus, a case of consolidated lung for diagnosis and a case of large hard calcareous fibroid of the uterus. Dr. Davies showed a case of partial molar pregnancy which was thought to be functional. All the cases gave rise to considerable discussion. Dr. Jorday, Dr. Kirk, Dr. McCall-Saunders, Dr. Westlake, Dr. Frazer and Dr. Egan contributed to the discussions.

#### METROPOLITAN COUNTIES BRANCH SOUTH WEST ESSEX DIVISION

A meeting of the South West Essex Division was held at Leyton on October 25th, when Dr. G. O. Hawthorne gave an illuminating lecture on *The British Pharmacopoeia* status and values. He thought his audience probably recalled dry lectures on materia medica wherein the *British Pharmacopoeia* was frequently mentioned and remembering wondered whether he could make those dry bones live! The function of the *British Pharmacopoeia* in the medical profession was a limited and subordinate one yet its predominant and supreme. It was compiled by order of the legislature and its prime function was the standardization of medicines.

With the *British Pharmacopoeia* there would be no certainty that a preparation made by different firms would be of constant composition. Tincture opii though grateful and soothing in London does when the General Medical Council commanded by the legislature set to work to compile the *British Pharmacopoeia* it had in general use. This was done with the help of the pharmaceutical societies and by analysis of prescriptions. The resultant volume would not be treated as a collection of remedies of guaranteed efficacy. It was no part of the work of the General Medical Council to decide what medical agents should or should not be used but to set a standard for those substances in general use. In the discussion which followed some criticism was made of changes in some of the preparations in the 1914 *British Pharmacopoeia*. Dr. Hawthorne hoped that such criticisms would find their way to the appropriate committee so that mistakes might be eliminated in the next edition.

#### SOUTH WALES AND MONMOUTH FREE BRANCH SWANSEA DIVISION

The annual dinner of the Swansea Division took place on October 13th at the Hotel Metropole, Swansea. The chairman of the Division, Dr. Daniel E. Evans, was supported by leading representatives of the district, and the Medical Secretary, Dr. Alfred Cox OBE, was the chief guest. Dr. Cox who had a great reception and was accorded musical honours gave an admirable instructive address. His Honour Judge Evans Davies in proposing the toast of the British Medical Association paid a special tribute to the practitioners of the district. Dr. A. P. Sladder proposed. The Chairman's health in a graceful speech and Dr. Evans in reply said he felt proud of the honour accorded him and of the splendid support given him by his colleagues. Mr. David Davies, J.P., editor of the *South Wales Daily Post* made a most entertaining speech in proposing the toast of Our Patients and Dr. Fawcett (ex-chairman of the Division) and Dr. J. M. Morris (president-elect of the South Wales and Monmouthshire Branch) were prevailed upon to reply. The toast of Our Guests was proposed by Dr. Hozart E. Rawlings one of the Division's most respected past chairmen and excellent replies were made by the Rev. Chancellor Watkins Jones and Mr. Walter Samuel barrister at law.

The growing strength of the Division is most satisfactory and its chairman is to be congratulated on the splendid send-off given at the commencement of his term of office. The dinner was very well attended and angurs well for the coming season with its interesting programme. During the dinner musical items were provided by an accomplished instrumental trio.

### National Insurance

#### INSURANCE ACTS COMMITTEE

##### ELECTION OF DIRECT REPRESENTATIVES FOR 1927-28

The following direct representatives upon the Insurance Acts Committee were elected unopposed for the Groups mentioned.

##### Group G

Dr. W. H. Smiles (Huddersfield)  
Dr. E. Welch (Leeds)

##### Group D

Dr. P. G. McGowan (Manchester)  
Dr. H. P. Oldham MBE (Morecambe)  
Dr. Frank Radcliffe (Oldham)

##### Group E

Dr. J. C. Davies (Wrexham)  
Dr. W. E. Thomas (Ystrad Rhondda Glam)

##### Group F

Dr. O. J. Palmer (Mansfield Woodhouse Notts)

##### Group H

Mr. E. Lewis Lilley FPCS (Leicester)

##### Group I

Dr. John Steed (Stanton-on-Wye)

##### Group J

Dr. D. G. Greenfield (Rushden Northants)

##### Group L

Dr. H. C. Jones (Barnstaple)

##### Group V

Dr. C. H. Panting (Leyton)  
Dr. H. Poole (Wendover Bucks)

##### Group O

Dr. H. J. Cardale (London)  
Dr. E. A. Gregg (London)

In the contested Groups—namely, A, B, G, K, and M—the results were as follows: the votes being counted upon the single transferable vote system and the counting verified by the Proportional Representation Society.

##### Group A

Dr. D. Elliot Dickson (Lockgelly Fife) Elected  
Dr. J. G. McCutcheon (Glasgow) Elected  
Dr. W. R. Martine (Haddington)  
Dr. John Orr (Edinburgh)  
Dr. D. Lyon Stevenon (Larhall)  
Dr. James Wilson (Irme Ayrshire)

## Group B

Dr R H Dix (Sunderland) *Elected*  
Dr J L Spens (Gateshead)

## Group G

Dr G L Lefevre (Longton, Staffs) *Elected*  
Dr J A Ainscow (Birmingham)

## Group H

Dr Thomas MacCarthy (Sherborne, Dorset) *Elected*  
Dr J Lockhart Livingston (Hursley)

## Group I

Dr J J Day (Canterbury) *Elected*  
Dr E R Fothergill (Hove) *Elected*  
Dr P V Fry (East Molesey)

## Scottish Subcommittee

Contests took place in connexion with the election of the eight members of this subcommittee by the members of Scottish Panel Committees—four by County Panel Committees and four by Burgh Panel Committees—with the following result

## County Panel Committees

Dr R Bruce, DSO (Culter, Aberdeenshire) *Elected*  
Dr J W Little (Newmarus, Lanark) *Elected*  
Dr W R Maritime (Weston, Haddington) *Elected*  
Dr James Wilson (Inver, Ayrshire) *Elected*  
Dr D MacDiarmid (Kippen, Stirlings)

(Note—Dr D E Dickson (Lochelly, Fife), who was also a candidate, automatically became a member of the subcommittee by reason of his election to the Insurance Acts Committee)

## Burgh Panel Committees

Dr W Lawson (Glasgow) *Elected*  
Dr G W Miller, DSO (Dundee) *Elected*  
Dr John Orr (Edinburgh) *Elected*  
Dr James Todd (Glasgow) *Elected*  
Dr Ann M Watson (Aberdeen)

ALFRED COX, Medical Secretary

## LONDON INSURANCE COMMITTEE

## The Farming Out of Insurance Practice

At the meeting of the London Insurance Committee, on October 27th, a report was received on a case which had been before the Committee on previous occasions, relating to the alleged failure of a practitioner to comply with his obligations to provide treatment personally for his insured patients. Of the 3,350 prescriptions issued from this practice in three months, 3,291 were signed by his assistant. The Committee had decided to censure the practitioner and to draw the attention of the Ministry to the case. The Ministry, however, while agreeing that it was very undesirable that an insurance practice should be conducted on these lines, held that there had been no breach, because the practitioner's obligation to give personal service was qualified by the provision that treatment might at any time be given by an assistant, provided reasonable steps were taken to secure continuity of treatment, and that if a patient demanded treatment from the practitioner personally the practitioner must comply, there was no evidence of absence of continuity in this case or that any patient had unsuccessfully demanded personal service. The Committee thereupon by deputation with some members of the Panel Committee, put the case before the officials of the Ministry. It was pointed out that both Committees were in accord as to the employment of assistants, holding that this furnished a valuable training ground for a young practitioner, but the "farming out" of a practice which meant that the whole or the greater part of the work was delegated to the assistant, destroyed part of the object which it was desired to secure, since the assistant would be deprived of the supervision of his principal. It was also pointed out that the object of the provision in the terms of service just cited was simply to provide a safeguard for the patient, and was not intended to apply to a practice *en bloc*. No report was given as to what answer if any the Ministry made to these contentions, but on the point made by the Committee, that it customarily gave permission for the employment of an assistant for a stated period, which was renewable and that it might properly refuse to renew its consent in a particular case the Ministry was unable to say that, the Committee's consent having once been given, it could not be revoked holding that this was purely a question of the legal construction of the Regulations.

## Appeals to the Ministry

In a case in which there was a charge by an approved society of negligence in certification, the Medical Service Subcommittee had come to the conclusion that the allegation was not proved but the full Committee had reversed this finding and decided to caution the practitioner. The practitioner thereupon appealed to the Ministry of Health which allowed the appeal and directed the Committee to pay the costs incurred by the appellant. One point in the case which turned upon the practitioner's statement that the insured person was "incapable of work," was that the practitioner considered this phrase to refer to the work to which the man was accustomed (driving a motor omnibus) and not to any other work, and this view appeared to be upheld by the Ministry which stated "We think that the appellant had sufficient grounds for forming the opinion that at the relevant times the insured person was 'incapable of work' and for certifying to that effect and therefore that his appeal succeeds."

Four practitioners who failed to furnish to the Committee returns of medical records in respect of insured persons who had been referred from their lists were fined by the Minister another was fined £5 and another £2.

## LONDON PANEL COMMITTEE

At a meeting of the London Panel Committee on October 25th, with Dr H J CARNALL in the chair, Dr T J Ryan was appointed a member of the Committee to fill a vacancy in the representation of Stoke Newington. The resignation of Mr A E Webb-Johnson, representing the consulting staffs of medical schools, owing to his inability to attend the meetings, was accepted. The chairman drew attention to the Williams Freeman presentation fund, stating that, although the work done for rural practitioners scarcely came within the purview of the London Committee, those who had worked on the Insurance Acts Committee and other bodies with Dr Williams Freeman realized how much he had done for his brethren in the country, and it might be that some London practitioners would like to join in the tribute that was being paid to him.

## The Responsibilities of Pharmacists

The Committee debated two cases of inaccurate dispensing which, with others, had been sent from the Insurance Committee for observations. In these cases the Pharmacy Subcommittee reported that the inaccuracies of the pharmacists were caused by a particular drug being over strength when supplied by two wholesale firms with whom they dealt and in these circumstances the subcommittee recommended that the facts did not warrant the chemists being penalized. Dr Cudde from the chair, objected to this finding, pointing out that nothing should be done to whittle away the responsibility of the chemists, and that if they had been let down by the wholesale firm they had their remedy. Dr A F Heald said that in this case his sympathies went out to the chemists the wholesale house was wholly at fault. The chemists had the preparation sent down in bulk, diluted it, and dispensed it, and there their responsibility ended. Dr V S Partidge said that it was admitted that the mistake was that of the wholesaler. This was a case in which if it had been a sale over the counter to a purchaser, no conviction under the Adulteration Acts would have been registered against the chemist, who would have been able to plead warranty but no amount of warranty was any defence before the Insurance Committee. The Panel Committee, however, decided not to express any opinion that chemists in these circumstances should not be penalized.

## Graduation of Medicine Containers

The chairman stated that the London Insurance Committee had now passed a resolution that all medicine containers supplied by those conveying drugs and appliances to the insured should be graduated, and the Minister of Health had been asked to consider the insertion of an appropriate clause in the terms of service. This matter was one on which the Panel Committee had continually insisted, and it was gratifying that, in spite of strong opposition from the chemists, the Insurance Committee had now come round to this point of view.

At the annual meeting of the Reading Insurance Committee, held on Friday last, Dr G H R Holden was elected chairman for the ensuing year.

## Correspondence.

## Ophthalmic Clinics for Insured Persons

SIR,—I am surprised that the question of establishing ophthalmic clinics for insured persons has been allowed to pass unchallenged by ophthalmic surgeons.

I see the remuneration suggested works out at about 8s 4d per case, and for this one would have in the great majority of cases to see the patients again for a post mydriatic test.

If the big societies cannot afford to send all their cases to ophthalmic surgeons it would be far better, in my opinion, to carry on with the present arrangement until they can afford to do so. There should also be some method devised so that a general practitioner can send urgent cases, such as foreign bodies, corneal ulcers, acute uveitis, glaucoma, etc., and fundus cases for examination.

It might also be pointed out to the big societies that if straightforward refraction cases can easily be dealt with by an optician, why is it that so many of these cases come to hospital to have their eyes tested?

Those of us who have had experience of working in clinics know that they would be neither for the benefit of the patient nor of the ophthalmic surgeons. Let us by every means in our power preserve the principle of private practice—I am, etc.,

October 23rd

OPHTHALMIC SURGEON

THE Home Secretary gives notice that he has withdrawn from Dr Lyle Pleydell Carter of Chippenham, Wilts, the authorizations granted by the Regulations made under the Dangerous Drugs Act, 1920, to duly qualified medical practitioners to be in possession of and supply raw opium and the drugs to which Part III of the Act applies, and has also directed that the exception in Regulation 4 of the Dangerous Drugs Regulations, 1921, which permits dangerous drugs to be supplied on a prescription given by a medical practitioner, shall not apply in respect of prescriptions given by Dr Carter. Any person supplying Dr Carter with raw opium or any of the drugs to which Part III of the Dangerous Drugs Act 1920, applies, and any person supplying the drugs on a prescription issued by Dr Carter, will be committing an offence against the Act.

## DIARY OF SOCIETIES AND LECTURES

**ROYAL SOCIETY OF MEDICINE**  
**War Section**—Mon 5 p.m. Major E. O. Lambkin, R.A.M.C. Recent treatment of Gonorrhoea  
 —Tues 5.30 p.m., Ballot for Fellowship  
 8.30 p.m., The Histology of Some Virus Infections of the C. Professor C. A. Fannett Some Nuclein The Mechanism —Dr J. M. Ross (2) Urethritis Hyper trophy Cystica Dr J. W. Orr Sebaceous Glands in the Oesophagus  
**Annual Dinner of the Society**—Wed, Hotel Victoria, 7.30 for 8 p.m.  
**Section of Dermatology**—Thurs 4 p.m. Cases.  
**Sections of Electrotherapeutics, Medicine, Surgery and Orthopaedics**—Thurs, 8.30 p.m. Special Discussion Radiological Pitfalls Openers Dr A. L. Barclay (Electrotherapeutics), Dr E. I. Spriggs (Medicine), Mr M. Page (Surgery), Mr H. A. T. Fairbank (Orthopaedics) Dr A. F. Huxst and Mr A. C. Jordan will also speak  
**Section of Obstetrics**—Fri 8 p.m. Mr J. P. Hedley Case of Papilliferous Ovarian Cysts Dr J. S. Fairbairn and Mr T. H. Sims Pseudomyoma pituitaria associated with Ruptured Ovarian Cyst and Appendicular Disease Mr A. R. Walker Diabetes Mellitus and Pregnancy

#### CURRENT NOTES

##### Committee Work at Headquarters Science Committee

THE Science Committee met on November 11th and elected Mr H. S. Souttar chairman for the coming session. The committee had before it a memorandum on the difficulties which have arisen in the practical application of the scale of minimum salaries for non-professional medical teachers, laboratory, and research workers adopted by the Representative Body in 1926. It was clear to the committee that some modification of the existing position was essential if the interests of such workers were to be adequately safeguarded in the future, and the committee is recommending the Council to take certain steps towards the solution of the problem in consultation with representatives of the bodies most closely concerned in the matter—namely, the medical schools. On the report of the Library Subcommittee the Science Committee decided to recommend to the Council the favourable reception of the suggestion referred to in last week's Current Notes for exploring the possibilities of effecting some measure of co-operation between London libraries for medical and scientific purposes. The committee also approved for recommendation to the Council the subcommittee's request for an increase in the Association's subscription to Lewis's Circulating Library with a view to meeting the increased demand now made by members upon the Association's library. It is worthy of note that in the past five years the annual circulation of volumes from the library has increased from 3,700 in 1922 to some 10,000 at the present time. The committee examined in detail and approved the scheme of the Joint Research Subcommittee for inquiry into the after-history of gastro-intestinal and the treatment of various ulcerations, details of which will be published in the JOURNAL in an early date. A report was received from Dr. Reginald Miller and Dr. Mand Sanders on the first year's working of the Paddington Green Children's Hospital Rheumatism Supervisory Centre, to which the Council made a grant of £100 last December. The committee expressed its warm appreciation of the progress recorded and decided to recommend to the Council the grant of a further sum of £200 in aid of the investigations being carried out at the centre. The committee reappointed the Library and Post Graduate the Scholarships and Grants, and

the Research Subcommittees and nominated also a special subcommittee to consider the position created by the general advertisement of ultra violet light apparatus for supply to the lay public for self-treatment.

##### Committee on Scope of Stat. and Hospital Medical Service

THE Representative Body at Edinburgh devoted some time to a discussion on the encroachment of various State and voluntary health services upon the sphere of private practice. As a result of this discussion the Council appointed a special committee consisting of representatives of the Medico-Political Public Health and Hospitals Committees, to consider the matter in its various aspects. At its first meeting on November 9th this committee elected Dr. J. W. Bone chairman and proceeded to explore the wide field covered by its reference. The committee began its investigations with the health services carried on by local authorities and decided to make a comprehensive survey of these services with the assistance of the Society of Medical Officers of Health both by seeking information from individual medical officers of health and by conducting personal investigations in certain typical areas. The question of the services offered to the public by voluntary and other hospitals will be considered at the next meeting.

##### Other Committees

Other committees which met during the week were the Central Ethical Committee, the Charities Committee, and the Organization Committee. The Charities Committee decided upon the apportionment of the money at its disposal between the several medical benevolent funds, subject to the approval of the Council.

##### National Insurance Change of Doctor

FROM various communications that have been received by the Medical Secretary it appears that there is some confusion as to the origin of the amendment of the change of doctor regulation which came into operation on October 1st 1927. Before then an insured person had a right of change of doctor at any time. Now unless there is agreement on the part of the two doctors concerned a change can only be effected fourteen days after notice has been given by the insured person.

The first suggestion as to limitation of the right to change at any time was made at the Consultative Council of Approved Societies as was stated by Sir Walter Kinnear

in his speech to the Panel Conference reported in the SUPPLEMENT of October 30th, 1926 (p 194) He said

The first suggestion before that body [the Consultative Council of Approved Societies] when it met was that he [Sir Walter Kinnear] should be asked to approach the profession with a request that the arrangement as regards immediate transfer from one doctor to another, which was made two or three years ago, might be altered and a time limit of three or six months imposed."

As a result of Sir Walter Kinnear's speech the Insurance Acts Committee communicated with Panel Committees, talked the matter over with the Ministry, and eventually suggested the present arrangement for a fourteen days' postponement of the actual change, failing immediate change by mutual consent. In connexion with this it should be remembered that originally an insured person could only change once a year, after due notice, then he was allowed to change once in six months, and finally he was given the right to change at any time, and these alterations were brought about very largely on the initiative of the Insurance Acts Committee.

#### The Annual Handbook of the Association 1927-28

The Annual Handbook of the British Medical Association for 1927-28 is now available. Copies can be had by members, gratis and post free, on application to the Medical Secretary, British Medical Association House, Tavistock Square, W.C.1. Primarily intended as a book of reference for honorary secretaries and other workers of the Association, the Handbook should prove of interest and assistance to all members. The new edition is completely revised. It contains the decisions of the Representative Body of the Association on matters of policy, particulars about medical charities, information as to the constitution of the Association, and as to the British Medical Journal (the circulation of which is now 36,750 copies weekly) and other publications of the Association, lists of the members of the Council and central committees, officers, and officials of the Association, and much other information regarding the work of the Association. To non-members the book is on sale at 3s 6d (post free 3s 9½d).

#### British Medical Bureau (The Scholastic Clerical, and Medical Association Ltd)

In the JOURNAL of November 5th (p 839) attention was directed to the institution of the British Medical Bureau under an agreement with the old-established Scholastic, Clerical, and Medical Association, Ltd, which, since 1880, has been providing for the wants of medical practitioners, so far as transfer of practices and provision of partners, assistants, and locumtenents are concerned, with great acceptance to the profession. Its new name of "British Medical Bureau" is intended to emphasize the relations it now has with the British Medical Association, and the fact that it will do its work in accordance with the general policy of the British Medical Association. It will be noted that members of the Association have the advantage of a reduced scale of charges. The Association has always been able to recommend this institution to its members as a result of much experience of its straightforward dealing, and can now do so with even more confidence than before, in view of the new relations that exist between the two bodies. The negotiations have been conducted by the Council of the British Medical Association with the approval of the Representative Body. An advertisement will be found at page 55 of this issue. All correspondence should be addressed to Mr A. V. Storey, General Manager, British Medical Bureau, 12, Stratford Place, Oxford Street, W.1 (telegraphic address, "Triform Wesdo, London", telephone numbers, Mayfair 1782 and 1783).

#### Armistice Day at the B.M.A. Head Office

On Armistice Day, Friday, November 11th, the members of the central staff of the Association assembled in the Great Hall shortly before 11 a.m., as they did last year, and observed the two minutes' silence standing. The Union Jack, flown from the flagstaff on the main building, was lowered to half mast during the silence, as in previous years.

## Association Notices

### BRANCH AND DIVISION MEETINGS TO BE HELD

**DORSET AND WEST HANTS BRANCH Bournemouth Division**—A general meeting of the Bournemouth Division will be held in conjunction with the Bournemouth Legal Society, by their kind invitation, on Monday November 21st at the Alexandra Hall, St Peter's Road, Bournemouth, at 8 p.m. when a discussion entitled "Should communications to a medical man be privileged in legal procedure, both civil and criminal?" will take place. The two chief speakers for the Legal Society will be Mr E. W. Marshall Huvey and Mr W. E. D'Angibau and for the Division Dr E. K. Le Fleming and Dr G. H. Morse. The subject will then be open for general discussion, and it is hoped that as many members as possible will be present and that a large number will take part in the debate. The Legal Society are kindly providing coffee.

**DUNDEE BRANCH**—A meeting of the Dundee Branch will be held in the Medical School, Dundee, at 8.30 p.m., on Tuesday, November 29th. Business: (1) Lecture with lantern slides, by Dr A. A. Macklin on "A polar expedition, with special reference to the medical aspects"—non-members of the Association and senior medical students are invited, (2) election of officers for 1928.

**EAST YORK AND NORTH LINCOLN BRANCH East Yorkshire Division**—The committee of the Scarborough Division have invited the members of the East Yorkshire Division to their second annual dance at the Crown Hotel on Thursday, December 8th. Tickets (10s 6d each) to be obtained from Dr Parker, 19, York Place or Dr Ferguson, 56, Gladstone Street, Scarborough. Applications for tickets with remittances, should be sent not later than November 30th.

**FIFE BRANCH**—A clinical meeting of the Fife Branch will be held in the Maternity Home, Townsend Crescent, Kirkcaldy, on Wednesday, November 23rd, at 3.30 p.m. Mr Frank L. Jardine (Edinburgh) will address the meeting on the use of heliotherapy in surgical cases.

**GLASGOW AND WEST OF SCOTLAND BRANCH Lanarkshire Division**—A meeting of the Lanarkshire Division will be held at St. Louis Station Hotel on Wednesday, November 23rd, at 3.30 p.m. Dr D. Dale Logan will read a paper on gas poisoning in collieries.

**KENT BRANCH ISLE OF THANET DIVISION**—A meeting of the Isle of Thanet Division will be held at the Queen's Hotel, Cliftonville, on Thursday, November 24th, at 8.45 p.m., when Dr H. Raven will take the chair. Paper by Dr H. Warwick Brown on nervous exhaustion, especially with reference to auto-intoxication as a factor in its production.

**LANCASHIRE AND CHESHIRE BRANCH Southport Division**—A meeting of the Southport Division will be held at 52, Houghton Street on Friday, November 25th, at 8.15 p.m. Agenda: Medical charities, medical service on St. Luke's Day, British Medical Association Scientific Lecture, public education in health, social function.

**METROPOLITAN COUNTIES BRANCH CITY DIVISION**—The annual dinner of the City Division will take place at the Grosvenor Restaurant on Thursday, December 1st, at 7.45 p.m., when several eminent guests will be present, and there will be a good musical entertainment. Tickets (12s 6d) from the secretary.

**METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION**—A meeting of the Lambeth and Southwark Division will be held at the Lambeth Carlton Club, Coldharbour Lane, on Tuesday, November 22nd, at 9 p.m. Agenda: Dr E. H. Jebens on Annual Representative paper by Mr E. P. Brockman (Orthopaedic Surgeon, St. Thomas's Hospital) on common disabilities of the foot and ankle.

**METROPOLITAN COUNTIES BRANCH MARYLEBONE DIVISION**—A meeting of the Marylebone Division will be held in the Council Chamber, British Medical Association House, Tavistock Square, on Wednesday, November 23rd, at 8.15 p.m. Agenda: Discussion: The relation of voluntary and municipal hospitals to pending legislation, to be opened by Dr Masteyman, St. Giles's Hospital, Cumberwell. Speakers representing the views of private practitioners, voluntary hospital and municipal hospital staffs, Poor Law medical officers, medical officers of health, and members of hospital boards of management will take part. All members and non-members of the Association are welcomed.

**METROPOLITAN COUNTIES BRANCH SOUTH WEST ESSEX DIVISION**—The South West Essex Division will hold a reception and dance at The Town Hall, Leyton, on Thursday, November 23rd. All medical practitioners, whether members of the British Medical Association or not, together with their friends, will be heartily welcome. The function will be in aid of medical charities. Tickets 7s 6d single, 12s 6d double (lady and gentleman), can be obtained from the honorary secretary, or from members of the Executive Committee.

**METROPOLITAN COUNTIES BRANCH WANDSWORTH DIVISION**—A special meeting of the Wandsworth Division will be held at Stanley's Restaurant, Lavender Hill on Wednesday, November 23rd, at 8.45 p.m. to consider the adoption of Rules of Organization. It will be followed by an ordinary meeting at which the agenda will be: (1) Clinical assistantships, (2) the work of the out-patient departments as it affects general practitioners.

**METROPOLITAN COUNTIES BRANCH WESTMINSTER AND HOLBORN DIVISION**—A meeting of the Westminster and Holborn Division will be held at Pomona's Restaurant, Strand, W.C., on Thursday, November 24th, at 8.15 p.m., preceded by a dinner at 7.30 p.m. Dr C. P. English will open a discussion entitled "Is it desirable that every member of the community should have an annual medical overhaul?"

**EDINBURGH BRANCH SOUTH-EASTERN COUNTIES DIVISION**  
An ordinary meeting of the South Eastern Counties Division was held in the Royal Hotel, Galashiels, on October 19th.

The following motion, proposed by Dr FLEMING, and seconded by Dr YOUNG, was unanimously approved and directed to be sent to the Medical Secretary of the British Medical Association:

That in view of the increased numbers of members and others who attended the last Annual Meeting at Edinburgh, and the difficulty many experienced in obtaining tickets for functions they wished to attend, a complete timetable of meetings, excursions, and social functions be printed in the SUPPLEMENT to the BRITISH MEDICAL JOURNAL instead of the very incomplete provisional timetable as published in the issue of June 25th 1927 in order to give members more time to study what is offered by the meeting and plan accordingly than is possible when such information is only available after registration at the actual meeting.

The SECRETARY reported the receipt of a letter from Dr COX on public education in health, and suggested that it be remitted to the chairman in the first instance.

Mr MERCEUR, in an interesting address, stated that orthopaedics dated from the publication of a paper in 1740 by Andre on the subject of "orthopaedia," but that the surgery of deformities went back to the days of Hippocrates, who wrote freely and eruditely upon the treatment of fractures and deformities. Orthopaedic surgery was then defined and a plea made for specialism in the subject. Spastic paralysis could be materially reduced by the lessened use of forceps. The early diagnosis of rickets and the sanatorium treatment of tuberculosis also helped in the same direction. Whole-hearted co-operation was required between the practitioner and the orthopaedic surgeon. Various points in the treatment of poliomyelitis, rickets, tuberculosis, and mechanical injuries were then discussed and illustrated by a considerable number of lantern slides.

Mr Merceur was warmly thanked for his address, on the conclusion of which a discussion was held on a letter from Sir David Wallace regarding a proposed orthopaedic hospital with major and minor clinics in the south-eastern district of Scotland. It was ultimately agreed that no further steps should be taken until the members of the Division had had an opportunity of meeting Sir David Wallace and Professor Fraser within the following fortnight. In sending out the agenda sheets the secretary was directed to make a special appeal for a large attendance of Hawick practitioners.

#### JAMAICA BRANCH

The monthly meeting of the Jamaica Branch was held on September 15th, when Dr C. A. H. THOMSON was in the chair.

Dis. GEOFFREY and MOODY read papers on the physiology and pathology of blood pressure, and anabolin in the treatment of blood pressure.

The annual general meeting of the Jamaica Branch was held at the P. G. Hospital, Kingston, Jamaica, on October 20th, when the president elect, Dr C. A. H. THOMSON, was in the chair and delivered his presidential address.

The following were elected office bearers for the ensuing year:  
President Dr C. A. H. THOMSON. President Elect Dr B. M. WILSON.  
Secretary Dr STRATHAIRN. Assistant Secretary Dr ALLEN.

It was decided to celebrate the jubilee of the Branch by a dinner, and the president, the president elect, the secretary, Dr GEOFFREY, and Dr GIDEON were elected a special committee to arrange the same.

The draft annual report was adopted subject to audit.

Drs ALLEN, BAXTER, and STRATHAIRN were appointed a sub-committee to arrange the monthly meetings.

In the evening the annual dinner was held at the South Camp Hotel, when twenty-two members were present.

#### LANCASHIRE AND CHESHIRE BRANCH

A SCIENTIFIC meeting was held on November 2nd at the General Hospital, Birkhead, the chair being taken by Dr E. H. MOVES, president of the Branch, about eighty members were present.

In a paper on the treatment of gonorrhoea in the male as at present practised Dr F. G. FOSTER emphasized the gravity and consequences of the disease, as well as the uselessness of treatment with oleoresins by the mouth. He discussed the differential diagnosis of other conditions and also the methods of determining if the infection had spread to the posterior urethra. This was followed by a full description of irrigation methods and the exhibition of a cheap but efficient irrigation outfit. An account was then given of the more common complications and other methods of treatment, the paper concluded with a discussion of the criteria of cure.

Mr ELDOY GORST contributed a paper on the treatment of hypopyon ulcer of the cornea with the electric thermophore. He explained that this type of corneal ulcer is usually the consequence of a foreign body on the cornea and that the infecting organism is usually the pneumococcus, occasionally other organisms. The thermophore devised by Shahan is an electrically heated apparatus to which applicators of varying size and shape can be fitted. It can be used from the main supply by means of a suitable lamp or other resistance, and is so contrived that it can be continuously maintained at a given temperature. The thermal death point of the pneumococcus being 138° F, corneal ulcer can be treated by the application of the thermophore at 150° to 160° for one minute a period in which material heating of the globe is not produced. Mr Gorst gave details of a series of cases which he had treated, in most of which successful results had been obtained.

After tea Dr DALZELL in a short but pointed speech introduced a discussion on the future of non-teaching hospitals,

emphasizing the extreme importance of this question to the profession at the present time. He succeeded admirably in his expressed intention of making his remarks provocative as he was quickly followed by other speakers who elaborated on the agreed with the points that he had made. It was unfortunate that the lateness of the hour cut short this discussion, as it obviously aroused very great interest.

The meeting closed with a hearty vote of thanks to the British Medical Association and Dr Dalzell, to the nation and authorities of the hospitals, and to the president.

#### METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION

A MEETING of the Lambeth and Southwark Division was held at the Lambeth Hospital, Brook Street, S.E., on October 28th. Dr A. L. BALLY, medical superintendent, gave a very interesting address on Poor Law administration. Various questions were asked and answered, and a general discussion ensued.

#### METROPOLITAN COUNTIES BRANCH STRATFORD DIVISION

A MEETING of the Stratford Division was held at the Educational Offices, Stratford, on October 25th, when the Division commenced its usual course of winter lectures. The chair was taken by Dr GARLAND COLLINS, medical officer of health for West Ham, and an address was given by Professor LEONARD HILL, F.R.S., on artificial sunlight and treatment by ultra-violet rays, which was demonstrated by lantern slides. Professor Hill enlarged upon all the various conditions to which, in his opinion the ultra-violet rays could be usefully applied. Over fifty practitioners were present.

#### SOUTHERN BRANCH PORTSMOUTH DIVISION

A MEETING of the Portsmouth Division was held at the Queen's Hotel, Southsea, on November 10th, when Dr LYLE presided.

Mr NORMAN C. LAKE, assistant surgeon, Charing Cross Hospital, gave an address entitled 'A busman's holiday in America,' which was listened to with intense interest. Perhaps the sections which excited the most interest were those dealing with Crile's clinic at Cleveland, the Mayo Clinic, and the comparison of English and American methods. The speaker also dealt with medico-political subjects, such as paying patients in hospitals, the management of hospitals, payment by insurance companies for accidents. This side of the lecture gave the Division much food for thought.

Mr RIDOUT opened the discussion and he was followed by Messrs LUMB, STANLEY HILLMAN, and MARTIN and Drs MACGILLIVRAY and GIRTINGS. On the motion of Dr Bosworth Wright seconded by Mr MARTIN, a vote of thanks to Mr Norman C. Lake for his address was carried with much applause.

Sixty-five members attended the meeting, of whom forty ate down to supper at 9 p.m.

#### SOUTH MIDLAND BRANCH

A MEETING of the South Midland Branch was held at the Fridge Hotel, Bedford, on October 27th. Dr HARWOOD YARRED, nominated by the Branch Council, was unanimously elected president for 1928.

On the motion of Dr FASNACHT, secretary of the Bedfordshire Division, the question of mileage fees for witnesses attending coroners' inquests, assize courts, etc. was considered. Dr Fasnacht reported the action of the Bedfordshire Division in negotiating with the Bedfordshire County Council and stated that they had arranged a mileage rate of 1s. a mile for the total journey both ways for inquests held more than two miles from the doctor's house, and that this had been subsequently extended to attending assize courts and quarter sessions. Dr Fasnacht reported that he had had difficulty in obtaining his fee personally, and suspected that other doctors had not been drawing it. He therefore wished to draw the attention of the Branch to this subject. He had also written and reported to the secretaries of the Northamptonshire and Buckinghamshire Divisions. The secretary of the Branch was instructed to direct the attention of the Divisions to this point and to urge them to approach their respective county councils. Dr BONE stated that it was legal for a coroner to pay a fee for a report when no inquest was held. The secretary was instructed also to inform the Division secretaries of this fact.

Dr S. J. ROSS read a paper on some difficulties in diagnosing certain surgical conditions. He gave details of several difficult cases which he had met recently and discussed them from the diagnostic standpoint. The paper was followed with interest, and there was some discussion subsequently in which Mr HART JONES (president), Mr HOLMAN, Dr BONE and Mr BARNES took part. On the motion of the PRESIDENT a hearty vote of thanks was passed to Dr ROSS. Tea was afterwards provided by the president.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH SOUTH WEST WALES DIVISION

A MEETING of the South West Wales Division was held at the Ivy Bush Hotel, Carmarthen, on November 2nd, when Dr D. H. PENNANT, D.S.O. (Saundersfoot), was in the chair.

The secretary was asked to convey the sympathies of the Division to the relatives of the late Dr Samuel Williams (Llanelli). Dr OSCAR WILLIAMS gave an excellent and concise account of the transactions at the Annual Representative Meeting at Edinburgh at which he represented the Division. After a long discussion on what had been done at the Annual Representative Meeting, the secretary was instructed to communicate with the

Dr. Oscar Williams was heartily thanked for his work and for his excellent report.

It was decided to invite Dr F W Lenz (London) to lecture to the Division and to invite Sir Ewen Maclean to open a discussion also decided to hold in May 1923

Liberal Education

instructed to write to the county councils of Carmarthen, Cardigan and Pembrokeshire and urge them to take steps for the propagation of public education in health and to draw their attention to Section 67 of the Public Health Act 1925.

The Director instructed the secretary to inform the county councils and the medical officers of health that it would do all it could to co-operate with them and with the medical officers of health if they would formulate a scheme.

## ST. LEONARD'S BRANCH HASTINGS DIVISION

A MEETING of the Hastings Division was held at the Queen's Hotel on October 13th.

Mr. SOMERVILLE HASTING FRCS gave an address on the state of medical practice in England and dealt first with those divisions which had occurred in the functions of the general practitioner. The old type of family doctor had been benefited and was for ever this was due to the increase in various public medical services of which there were now about seventeen categories and the number would tend to increase. This type of doctor thought himself fore-shadowed some form of State medical service. The great defect of this service was its lack of co-ordination and it was intended to create watertight compartments which would not be efficient without the guiding influence of the general practitioner. Mr. Hastings then showed how the public service had resulted in great public benefits. He believed however that there was a real danger of the services being retained in the hands of specialists. The general practitioner's function in this scheme he thought was to be a medical regulator. A State medical service was inevitable and it was the duty of every general practitioner to make up his mind that or of a service he wanted and then to strive and influence his organization and the people to see that he got such a service.

A good discussion followed in which it appeared that Mr. Hering's views did not meet with general approval.

### SEFOLS Branch

A meeting of the Suffolk Branch was held at the Royal Hotel  
Lore on October 22nd when Dr A. E. Go. at Birthlow's  
Hospital read a paper on anaemia in which he dealt with the  
differential diagnosis of anaemias their causes and their treat-  
ment. Members and their wives were entertained to tea by the  
Lore staff practitioners.

## ULSTER BEACH TROOP DIVISION

The annual meeting of the Tyrone Division was held in the Tyrone County Hospital on November 3rd.

After was read from the Minister of Labour on a scheme of equal practitioner treatment for disabled ex-soldiers in reply to a resolution passed at a previous meeting of the Division advocating the adoption of payment on the basis of a panel system in stead of the present system which was open to abuse and was unfair factor. The reply of the Minister was referred to the Branch Council for consideration.

Dr W L Le (Newtownstewart) was appointed chairman of the Division for the ensuing year Dr F Bradley (Fintona) vice chairman and to retain the position of secretary and Dr W P Leach was re-elected assistant secretary The Executive Committee was elected and Dr Thompson was appointed representative on the Branch Council.

The part time medical referee system was next considered. Several members got in favour of retaining it and voted against it. The consensus of opinion of the meeting was that it was not a satisfactory system and that they were still in favour of whole-time referees. Dr LYLE proposed that as the trial term of 6 months had elapsed the deputation that visited the Ministry on a previous occasion should again arrange to do so. The Secretary was instructed to bring this under the notice of the Branch Council.

A circular was read by the SECRETARY on the education of the public on health matters. It was decided that no action be taken as the health services were in such a chaotic state in Northern Ireland that no useful purpose would be served pending the adoption of the Poor Law Commission's report.

Dr Kinn (Enniskillen) gave a very lucid and interesting summary of the Poor Law Commission's report emphasizing the points as they affected the various brackets of the medical service. He pointed out a very grave omission in the report—namely the necessity of a Ministry of Health for Northern Ireland. After a short discussion on some points in the report—such as the whole was considered satisfactory with the above exception—it was proposed by Dr McNEAGHAN, seconded by Dr McCULLY,

That in the opinion of the Tyrone Division of the British Medical Association a Ministry of Health with an advisory council having statutory recognition is absolutely necessary for the proper co-ordination of the proposed health services.

A decision took place regarding the form of medical certificate in the case of a junior applying to be excused on grounds of ill health. It was pointed out that the form was in its essence derogatory to and incompatible with the spirit of an honourable profession and that this matter be brought to the notice of the Branch Council. The members drew attention to the inadequate remuneration paid to Crown witnesses and to registrars when called on to give evidence in court. The same applied to medical attendance on police cases. The clerk was instructed to bring this matter before the Branch Council.

The meeting ended with a vote of thanks to Dr. Bidd.

WEST SOMERSET BRANCH

A MEETING of the West Somerset Branch was held at the Taunton and Somerset Hospital Taunton on October 23th when Dr E N JEFF was in the chair. Revised Organization Rules were adopted and a few other matters of general interest were discussed.

Dr ERIC PEARLMAN consulting physician Queen's Hospital for Children London gave a British Medical Association Lecture entitled 'The principles of nutrition in their application to the feeding of infants and children' illustrated by lantern slides.

The annual dinner was held in the evening at the County Hotel Taunton. After dinner the company were entertained by a musical programme contributed by visitors and members present at the dinner.

YORKSHIRE BRANCH WAKEFIELD POSTERACT AND CASTLEFORD  
DIVISION

A MEETING of the Wakefield Pontefract and Castleford Division was held at the Great Bull Restaurant Westgate Wakefield on November 10th when Dr. Gray was in the chair.

The chairman opened the discussion on death certification and coroner inquests by detailing the new regulations and dealing with some of the advantages of them. He mentioned that even if a *post mortem* examination had been made there still remained a small percentage (4 to 5 per cent) of cases in which the cause of death was undeterminable.

Dr STEVEN who followed dealt with the question from the general practitioner point of view and emphasized the delay which arose from the posting of the death certificates to the Registrar.

Mr HOWARTH (coroner for Wakefield) gave an interesting account of early death certification stating that the first certified death in Wakefield was in 1845. He gave some interesting cases of death which he had in the register in pre-certification days many having been entered as dying from the "Visitation of God". He deplored the lack of co-ordination between various bodies and the delays which arose from that cause. He pointed out that it was the duty of the doctor to notify the police or the coroner in any case in which he felt unable to certify or when there was any cause for suspicion.

Mr. Butler (registrar of deaths) drew attention to the fact that there was a difference in the registrars point of view and the point of view of the public to consider in all these matters. He mentioned that a registrar was able to register a case of stillbirth where a neither a doctor nor the midwife had given a certificate upon the statement of any other suitable person. He expressed a desire that where an unnatural cause of death was given on a certificate it should be entered in block capitals.

The discussion was continued by Alderman W. BENTLEY the coroner for Pontefract Mr. DENTON registrar for Wakefield and Dr. LISTER WALKER and Twist.

## PUBLIC HEALTH APPOINTMENTS

### STATEMENT BY THE MEDICAL WOMEN'S FEDERATION

THE Medical Women's Federation, being much concerned to note that a large proportion of the underpaid public health appointments advertised by local authorities are accepted by women, has issued to its members the following memorandum

Women who may be tempted to accept these black listed appointments are asked to remember the following facts:

1 That the whole position of women in the medical profession depends on their complete adherence to professional standards of conduct and policy. They would never have been admitted to professional organizations nor accepted as colleagues in any sense it had been anticipated that they would attempt to undercut their male competitors. Nothing more calculated to introduce an element of discord into the relations of men and women than the spread of this practice.

2 That the salaries offered would be far lower than they are now but for the determined stand made in pre war days. The present position is not a new one. Medical women ever since their admission to the profession have had to make precisely the same sacrifices for principle as are now demanded. With the inauguration of the school medical service in 1903 and later when maternity and child welfare posts were created persistent efforts were made by local authorities to pay their assistant medical officers below the British Medical Association minimum, and to secure women at a lower rate than men. With rare exceptions the efforts were a failure and blacklegging was

so uncommon that until the close of the war comparatively few authorities wasted time in advertising posts below the agreed minimum.

3 That the salary scale fixed by the British Medical Association and the Society of Medical Officers of Health is now too high in relation to the enormous expense of medical education and the heavy cost of maintaining a household. Young men and women with few responsibilities should do nothing to make life impossible for the many of both sexes who have heavier obligations.

4 That lowered pay invariably implies lowered status and prestige. Holders of appointments which have been banned invariably find themselves cut off from professional advancement and stultified in all their work. The woman who straps herself is belonging to an inferior grade of doctor cannot complain if she is taken at her own valuation.

5 That in regard to salaries the minimum always tends to become a maximum, and once the agreed scale is abandoned and the professional ranks are broken, the lowest salaries will tend to be adopted by other authorities making new appointments. Authorities wishing to be economical would proceed still further, and the scale all over the country would be rapidly depressed.

6 That attempts to evade the scale and split the ranks of the profession by offering a man's post at the agreed rate and a woman's at slightly below are particularly to be deprecated. Where the rule of "equal pay for equal work" is violated there is no limit to the extent to which women will be exploited and swayed. Medical women in the public health service have often been faced with the danger of a rise for male employees only, which could only be resisted by appealing to an inviolable rule.

7 That a woman who has betrayed her professional brethren, past, present, and to come, cannot expect the support of her colleagues or of professional organizations at any time in her career.

## National Insurance

### LONDON PANEL COMMITTEE

#### Dinner Dance and Presentation

THE London insurance practitioners' eighth annual dinner and dance will be held at the New Prince's Galleries, Piccadilly, on Thursday, December 1st, at 8 p.m., reception at 7.30. The dinner and dance are open to all practitioners and their friends. Tickets, 17s 6d each (exclusive of wines, but including light refreshments during dance), or dance tickets only (7s 6d each, inclusive of light refreshments during dance) may be obtained from any member of the London Panel Committee or from Dr C. L. Batteson (17, Russell Square, W.C.1). An added attraction to practitioners attending the dinner will be the presentation which will take place immediately afterwards to Dr H. J. Cudde, chairman of the London Panel Committee, as a recognition of his sterling services on behalf of members of the medical profession working under the Insurance Acts.

## Correspondence

### The Panel Conference

SIR,—We are indebted to Dr Lukin for his criticism of the Panel Conference (SUPPLEMENT, October 29th, p. 178). I, however, differ somewhat with him as to the place where the speakers should stand. All should seek from the platform, facing then audience, even though much time is lost while they walk to the platform. Much of this can, however, be saved by a little forethought. Enclose with the final agenda a form containing spaces for the name and address of the representative and as many numbered blank spaces as there are motions. Each representative to fill the spaces referring to the motions on which he wishes to speak with one word—for, against, or "amend"—returning it at once to the secretary. A clerk can readily tabulate all forms as received, giving the name of each intending speaker under the appropriate heading—for, "against," "amend"—of each motion. With such a list the chairman can call a speaker from each lot in turn. The intending speakers, on their part, should move up to the space at the ends of the platform ready to step forward when called directly a particular motion is reached. There is ample standing room for a considerable number of speakers. When those who sent up their names have spoken then the chairman could call for any others who wished to speak. The meeting could at that time, as it present, with the approval of the chairman call for an immediate vote.

The Conference dinner is a pleasant function and I should be sorry to see it dropped, but as it is at present arranged

it detracts very much from the efficiency of the Conference. It causes the latter part of the business to be rushed through in a most unseemly manner, so that the meeting can be finished at the time fixed for the dinner. The result is that many motions are adopted or rejected without due discussion or consideration. The dinner ought to be held on the preceding night. This arrangement would cause little or no inconvenience to most representatives. So convinced am I about this evil that I purpose impressing on the Bury Panel Committee not to support the dinner unless it is so held. Personally I have determined, should the Bury Panel Committee again favour me with their confidence, not to attend the dinner if it be on the night of the Conference. The panel representatives do not go to London for the dinner, but for the Conference, and it ought to be the first consideration—I am, etc.,

Bury, Lancs, Nov. 5th

JAMES HOLMES

### Change of Doctor

SIR,—It interests me to see at last in the columns of your esteemed JOURNAL (SUPPLEMENT, October 29th, p. 178) some little protest against the new scheme of change of doctor under the National Health Insurance Act.

From a practical point of view the complex and involved new method of procedure renders it next to impossible for the average panel patient with his limited time, to change his doctor, with the trouble involved in writing letters and repeatedly visiting insurance committee offices, and other delay. Further, I wonder whether in these new schemes which involve any consideration is given to the younger medical practitioner who launches out on his own and attempts to build up some form of panel practice. Do the more senior members of the profession realize that in the creation of such a scheme they have more or less completely closed the gate to their younger colleagues, beset as they are with numerous other difficulties in making headway in their profession?

I think this aspect of the question calls for urgent consideration on the part of those responsible for the initiation of the scheme, and I feel sure that in bringing these points forward I am expressing the views of several of my young colleagues—I am, etc.,

November 4th

ALUN LLS

SIR,—In the SUPPLEMENT of October 29th there is a letter from Dr H. S. Griffith mentioning the existence of a large practice near him employing several doctors so that a patient rarely saw the same doctor twice.

In such a case, no doubt, it would be better for the patient to be under the continuous observation of one doctor who had time to take an interest in him. But such large practices form only a small percentage. The majority of practices are but medium sized. In such cases the frequent changing of doctors at any moment destroys continuity of observation, which in many cases is essential for diagnosis and also, therefore, tends to make the doctor lose interest in his work, as he cannot feel that a patient is really his patient.

In the majority of cases I have found that the transfers are effected for what is purely a side issue (that is, when they are not virtually contrived). In some cases the patient may misunderstand the doctor, or his certain doubts in his mind which at the moment the doctor does not appreciate. In most, if not all cases these doubts are cleared up when the patient attends next time, and the patient then appreciates that the doctor understood the case. The effect of this being, able to transfer at any moment is that the public get an unnecessarily lowered opinion of the profession, being virtually encouraged to believe that many doctors do not understand their work.

Many of us younger medical men if given a chance will make good. I noticed this when I first started in practice. This was towards the end of the "transfer in block" period. I was of a youthful appearance, and many patients obviously thought it rather incredible at first that I could know anything about it. But they were on my list, and they soon found, after attending a few times that there was no reason to suppose any difference in competence, and they became very loyal patients. I think we are entitled to a fair chance.

In many cases transfers are effected because of a small debt on account of the family. We are very lenient to poor people, and do not dream of pressing them for a small debt of 2s. But it is rather unfair to us to lose the panel patient the only one, perhaps for whom we are paid, because of having attended (without fee) a member of the family. This should not be encouraged by the profession.

It is not necessary to insist on the value or continuity of observation in medicine. Sir James Mackenzie stressed it enough. The free transfer took this away from us—and probably in the clinically most serious and important cases. We do not take too much responsibility on ourselves, and in cases of doubt we send them to hospital with a letter as to the clinical history. In many cases we get a letter from

### British Medical Association

#### CURRENT NOTES

##### Some Work of the Week.

##### Hospital Policy and Contributory Schemes

THE Hospitals Committee met on November 16th under the chairmanship of Mr W MeAdam Eccles (London) who has succeeded Mr H S Souttar, on the appointment of the latter to the chairmanship of the Science Committee. Dr Astley Clarke (Leicester) is now deputy chairman of the Hospitals Committee. The committee was chiefly occupied in a discussion of the probable effects upon the medical profession of the contributory schemes which are now springing up in all parts of the country. A comprehensive inquiry into this development has been set on foot and it is clear that in many of these schemes there are points which conflict with the accepted policy of the British Medical Association. At a later stage the Association will probably be recommended to prosecute an active campaign among the hospital staffs in the hope that the principle already enunciated may be actively enforced before irretrievable harm has been done. The committee is seriously concerned at the apathy shown in many quarters in this connexion. The committee has enlarged the personnel of the subcommittee which is dealing with the general co-ordination of hospital provision and the subcommittee now includes the chairman (Mr MeAdam Eccles), the deputy chairman (Dr Astley Clarke), Sir Richard Luce, Mr L W G Masterman, Dr B Sangster, Sir Edmund Mr Souttar, Dr H M Stewart, and Dr W A West Watson.

##### First Meeting of Insurance Acts Committee

The Insurance Acts Committee met on November 17th, appointed Dr H C Dym (Birmingham) as its chairman and discussed the action to be taken on the resolutions of the Panel Conference. The committee appointed a Scottish Subcommittee, a Rural Practitioners Subcommittee, an Emergency Subcommittee, and a Prescribing Subcommittee and made the following nominations to the Distribution Committee for England and Wales: Dr H C Dym (Birmingham), Dr E Lewis-Lloyd (Mentoneth), a nominee of the London Panel Committee, and the Deputy Medical Secretary together with Dr W Baigent (Northallerton), Dr H T Jones (Barnstaple), and Dr J Stead (Stranmillis, Co Wick) when questions concerning mileage are under discussion. The importance of the last-named body is indicated by its reference.

To determine the basis on which the proportion in the fund available for the remuneration of an insurance practitioner for the treatment of insured persons and for mileage should

be distributed among the Insurance Committee areas in England and Wales.

On the corresponding committee for Scotland the Scottish Subcommittee of the Insurance Acts Committee has nominated Dr D Elliot Dickson (Lochgelly), Dr J G McCulloch (Glasgow), Dr J Wilson (Irvine) and the Scottish Medical Secretary.

##### Lunacy Law and the Protection of the Practitioner

It will be remembered that the Representative Body at Edinburgh on consideration of a memorandum submitted by the Special Committee on Lunacy Law and Mental Disorder, thanked the committee for its memorandum, and referred it to the Council, with a request that the committee should be reappointed with instructions to take whatever steps are possible to secure that the Report of the Royal Commission declares to be fair—namely that the medical profession should not be asked to perform their essential part under the menace of litigation which even if unsuccessful, may spell financial or professional ruin. The Lunacy Law Committee at a meeting on November 18th under the chairmanship of Dr R Langdon-Down (Hampton Wick) discussed this reference and made certain recommendations which will be considered by the Council at its meeting on December 14th.

##### Standard of Treatment under National Insurance Acts

The following extract from the eighth Annual Report of the Ministry of Health for 1926-27 affords an interesting commentary upon the efficiency of the medical service under the National Insurance Acts.

During the year (1926-27) there were only 77 cases in which money was withheld from doctors, the total amount being £1,000 as compared with 100 cases in 1925 when the total amount withheld was £1,509. The corresponding figures for 1924 are 134 cases and £2,053 withheld. This progressive reduction is as remarkable as it is reassuring. Out of the 77 disciplinary cases which resulted in the withholding of money, only 16 were cases of neglect (i.e. failure or refusal to visit or unsatisfactory treatment etc.) as compared with 32 in the previous year. The fact that out of 13,000 doctors on the Medical List there were only 16 cases in which a charge of negligence sufficiently serious to justify the withholding of money was established indicates that a high standard of treatment has been secured. Of the remaining 61 cases 15 were cases of irregular certification, 5 were cases of overcharging, and 21 were cases of failure to keep proper records. There were 14 cases of failure to make necessary reports or to return record cards to Insurance Committees and the 6 miscellaneous cases included irregularities in prescribing and unsatisfactory surgery accommodation.

The largest amount withheld from a doctor was £80 for failure to keep medical records. This does not represent a penalty in the strict sense, but the withholding of remuneration in respect of work which had not been done. The remainder of the total amount withheld was made up of sums ranging from 10 guineas to £50.

## Association Notices

## BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH COVENTRY DIVISION**—A meeting of the Coventry Division will take place at the Coventry and Warwickshire Hospital on Tuesday, December 6th at 8.30 p.m. Mr M Anderson will read a paper on carcinoma of the rectum.

**BIRMINGHAM BRANCH DUDLEY DIVISION**—A meeting of the Dudley Division will be held at the Corbett Hospital, Stourbridge, on Thursday, December 1st, at 8.30 p.m. Dr B H St Clair Roberts will read a paper on ophthalmic benefit under the National Health Insurance Act.

**BORDER COUNTIES BRANCH ENGLISH DIVISION**—The annual dinner of the English Division will take place at Cockermouth on Friday, December 9th.

**DUNDEE BRANCH**—A meeting of the Dundee Branch will be held in the Medical School, Dundee, at 8.30 p.m., on Tuesday, November 29th. Business: (1) Lecture with lantern slides, by Dr A A Mackinnon on 'A polar expedition, with special reference to the medical aspects'—non-members of the Association and senior medical students are invited; (2) election of officers for 1928.

**EAST YORK AND NORTH LINCOLN BRANCH EAST YORKSHIRE DIVISION**—The committee of the Scarborough Division have invited the members of the East Yorkshire Division to their second annual dinner at the Crown Hotel on Thursday, December 8th. Tickets (10s. 6d. each) to be obtained from Dr Parker, 19 York Place or Dr Feigson, 56, Gladstone Street, Scarborough. Applications for tickets with remittances, should be sent not later than November 30th.

**GLASGOW AND WEST OF SCOTLAND BRANCH**—A clinical meeting of the Glasgow and West of Scotland Branch will be held, by the courtesy of the Glasgow Parish Council and the medical superintendent, at Stobhill Hospital, Springburn, Glasgow, on Tuesday, November 29th, at 3 p.m. Tea will be served from 2.15 p.m. to 3 p.m. Cases will be demonstrated by members of the staff. The annual dinner of the Branch will be held the same evening at 6.30 at Feigson and Lister's Restaurant, 36, Buchanan Street, Glasgow.

**KENT BRANCH DARTFORD DIVISION**—A general meeting of the Dartford Division will be held at the King Edward Avenue Hospital, Dartford, on Tuesday, November 29th, at 3 p.m., when Dr Malcolm Donaldson will give his second lecture.

**LANCASHIRE AND CHESHIRE BRANCH HYDE DIVISION**—A meeting of the Hyde Division will be held at the Stalybridge Town Hall on Thursday, December 8th, at 8.30 p.m., when Sir William Milligan will give an address.

**LANCASHIRE AND CHESHIRE BRANCH WARRINGTON DIVISION**—A meeting of the Warrington Division will be held at the Infirmary, Kendrick Street, on Friday, December 2nd, at 8.30 p.m. Agenda: Mr W R Douglas (Manchester) will read a paper on chronic inflammation of the caecum.

**METROPOLITAN COUNTIES BRANCH CITY DIVISION**—The annual dinner of the City Division will take place at the Trocadero Restaurant on Thursday, December 1st at 7.45 p.m., when several eminent guests will be present, and there will be a good musical entertainment. Tickets (12s. 6d.) from the secretary.

**METROPOLITAN COUNTIES BRANCH FINCHLEY DIVISION**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, December 6th, at 8.45 p.m. Mr Trevor Davis will read a paper on some points in gynaecological diagnosis.

**METROPOLITAN COUNTIES BRANCH HAMPSHIRE DIVISION**—A meeting of the Hampstead Division will be held at the Hampstead General Hospital on Thursday, December 8th, at 8.30 p.m. Mr A E Hayward Pinch will read a paper on radium therapy.

**METROPOLITAN COUNTIES BRANCH HENDON DIVISION**—The next clinical meeting of the Hendon Division will take place at the Hendon Cottage Hospital to-day (Friday, November 25th) at 8.30 p.m. when Dr Eric Pritchard, medical director, Infants Hospital, Vincent Square, will deliver an address on infant feeding.

**METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION**—A clinical meeting of the Lambeth and Southwark Division will be held at the Belgrave Hospital for Children, Clapham Road S.W., on Wednesday, December 14th. It will be conducted by Dr M S Thomson. Tea at 4 p.m.

**METROPOLITAN COUNTIES BRANCH LEWISHAM DIVISION**—The following programme of meetings has been arranged by the Lewisham Division:

Dec 20th	The Differential Diagnosis of Pulmonary Tuberculosis by Dr Ro e Jordan
Jan 17th	Clinical Evening at South Eastern Children's Hospital, Sidcup
Feb 21st	Some Recent Aspects of Biological Therapy by Dr J Stanley White with lantern slides and a film. How Biological Products are Made
Mar 20th	Birth Control by Dr Jane L Hawthorne
April 17th	Ignatation of the Skin by Dr William A Goldsmith
May 1st	Clinical Evening at St John's Hospital Lewisham arranged by Dr E Okunheim
May 15th	Annual Meeting
Jun 15th	Some Points in the F.R.C.S. Examination of the Alimentary Tract by Mr J M Redding

Meetings to be held at 8.15 p.m. at the Town Hall, Catford S.F.6, unless otherwise stated.

**METROPOLITAN COUNTIES BRANCH NORTH MIDDLESEX DIVISION**—The following programme of the meetings of the North Middlesex Division has been arranged:

Nov 30th	Dr F W Price	Some Recent Advances in the Diagnosis, Prognosis and Treatment of Heart Disease
Jan 25th	Mr F H C Benians	Local Immunization and Antitoxin Therapy
Feb 23rd	Ten minute Papers	
Mar 23rd	Dr I R Verrilland	Dyspnoea in Nervous Disease
April 25th	Dr G Grant Mcdonald	Insulin
May 30th	Annual Meeting	
June 28th	Visit to Oxo Factory	

**METROPOLITAN COUNTIES BRANCH ST PANCRAS DIVISION**—A meeting of the St Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, December 13th at 9 p.m. Dr Eric Gordon Fleming will read a paper on chiropractic and common sense.

**METROPOLITAN COUNTIES BRANCH SOUTH WEST ESSEX DIVISION**—A meeting of the South West Essex Division will be held at Livingstone College, Knott's Green, Lenton, on Tuesday, December 6th, at 3.30 p.m. Dr Dan McKenzie will read a paper on untolden ways in medical history.

**MIDLAND BRANCH CHESTERFIELD DIVISION**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield on Friday, December 9th, at 8.15 p.m. Mr G O'Rourke, LL.D., will speak on medicine and the law.

**MIDLAND BRANCH HOLLAND DIVISION**—A meeting of the Holland Division will be held at Spalding on Friday, January 6th 1928, at 3 p.m. Sir Humphry Rolleston Bt, Regius Professor of Physics in the University of Cambridge, will give a British Medical Association Lecture on the medical aspects of idiocy and imbecilities.

**NORFOLK BRANCH**—A meeting of the Norfolk Branch will be held at the Norfolk and Norwich Hospital, on Wednesday, November 30th, at 3.15 p.m. when Dr H J Starling will read a paper on the diagnosis and treatment of hyperthyroidism (illustrated by lantern slides).

**NORTH OF ENGLAND BRANCH SUNDERLAND DIVISION**—The following programme of meetings has been arranged by the Sunderland Division:

Feb 2nd	Annual Dance in aid of B.M.A. Charities. Further particulars to be issued later
" 15th	Dr Alfred Parkin. The Medical Legal Aspect of the Workmen's Compensation Act
Mar 21st	Dr Harvey Evans. The Place of the Uterine Carcinoma
April 18th	Dr A F Bernard Shaw. The Present Status of the Jaundice Problem
May 16th	Dr J C Spence. Hypertrophic Pyloric Stenosis—its importance as an example of the method of diagnosis, treatment, and study of disease in childhood

The meetings will be held on the third Wednesdays in the month at the Royal Infirmary, Sunderland, at 8.15 p.m.

**SOUTHERN BRANCH JERSEY DIVISION**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, December 15th, at 8.30 p.m. Mr C T Cuthbert will read a paper entitled "From Old to New."

**SOUTHERN BRANCH PORTSMOUTH DIVISION**—A meeting of the Portsmouth Division will be held at the Queen's Hotel, Portsmouth, on Thursday, December 8th. Dr F M R Walsho will lecture on faith healing. The meeting will be preceded by a supper at 9 p.m., price 3s. 6d., including gratuities.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH CARDIFF DIVISION**—A meeting of the Cardiff Division will be held in the Engineers' Institute, Park Place, Cardiff, on Thursday, December 15th, at 8.30 p.m. Professor W E Dixon, M.D., F.R.S., will give a British Medical Association Lecture on the trend of thought in modern therapy. After the lecture Professor Dixon will be entertained at a Divisional supper at the Park Hotel, Cardiff.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH SWANSEA DIVISION**—At the meeting of the Swansea Division to be held at the General Hospital Swansea, on Thursday, December 8th at 8.15 p.m. Dr S A Hunter Wilson will deliver a British Medical Association Lecture.

**SURREY BRANCH CROYDON DIVISION**—At the meeting of the Croydon Division to be held at the Croydon General Hospital on Wednesday, December 14th, preceded by tea at 4 p.m., Mr A H Todd will give a lantern demonstration on selected orthopaedic cases of general interest.

**SURREY BRANCH GUILDFORD DIVISION**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Friday, December 2nd, at 4 p.m. Dr J M Wyatt will read a paper on purpural sepsis. Tea at 3.45.

**SUSSEX BRANCH HASTINGS DIVISION**—The annual dinner arranged by the Hastings Division will take place on Friday, December 2nd, at the Albany Hotel, Hastings. Tickets 7s. 6d. (including buffet supper). Members are requested to notify the honorary secretary, Dr T Reed, Hawkswood, London Road, St Leonards-on-Sea as early as possible how many tickets they will require.

**YORKSHIRE BRANCH DUNSWORTH DIVISION**—A meeting of the Dunsworthy Division will be held at the Dunsworthy and District Hospital on Friday, December 2nd.

**YORKSHIRE BRANCH HUDDERSFIELD DIVISION**—The medical dinner of the Huddersfield Division will be held in the Royal Infirmary on Wednesday, December 7th from 9 p.m. to 1 a.m. For those who do not wish to dance a bridge or a concert at 9.15 p.m., will be arranged. As the dance will only be held if a sufficient number of tickets are sold it will greatly assist the committee if members will notify the honorary secretary, Mr A

Lanier Walker 4 New North Road Huddersfield before November 25th the number of tickets required. The price of tickets is 6d each.

**YORKSHIRE BRANCH SHEFFIELD DIVISION**—A general meeting of the Sheffield Division will be held on Friday December 9th at the University Sheffield at 8.30 p.m. when a British Medical Association Lecture will be delivered by Professor H. Beckwith Whitehouse on practical applications of recent views on the menstrual functions.

**YORKSHIRE BRANCH WAKEFIELD PONTEFRAC AND CASTLEFORD DIVISIONS**—A meeting of the Wakefield Pontefract and Castleford Division will be held at the Great Bull Restaurant, Westgate Wakefield on Thursday December 8th. Mr E. R. Flint Assistant Surgeon General Infirmary Leeds, will lecture on fracture. Supper at 7.30 p.m. (2s. 6d.) will precede the lecture.

## Meetings of Branches and Divisions

**BORDER COUNTIES BRANCH DUMFRIES AND GALLOWAY DIVISION**  
A most interesting meeting was held by the Dumfries and Galloway Division at the Lochmahon Sanatorium on November 1st. The members were welcomed by Sir William Younger M.C. of Auchin Castle on behalf of the committee of management.

Dr J. RITCHIE introduced a discussion on the new legislation in Scotland on midwives and maternity homes, emphasizing the importance of practitioners taking care to avoid breaches of law. Questions were asked and answered.

Dr STEVENSON in a clear and instructive address detailed the history of the sanatorium and its extension and gave graphic demonstrations of the apparatus used by himself and his staff both in the diagnosis and treatment of residual and visiting patients.

Following the demonstration visits were paid to the various buildings and extension, after which tea was provided and votes of thanks were accorded to Sir William Younger and his committee and to Dr Steven and his staff.

**DORSET AND WEST HANTS BRANCH WEST DORSET DIVISION**  
A meeting of the West Dorset Division was held at the County Hospital Dorchester on November 17th.

Dr MORRIS showed a case of a child of 7 with rheumatic nodules on the hands and fingers.

Dr VASU VERTMAN showed a man of 57 suffering from a neoplasm of the descending colon who was admitted with marked ascites and massive oedema of the legs. His heart was dilated. He was treated with injections of 12 c.c. of a 10% urotel twice weekly for a fortnight. There was profuse diarrhoea and the urine increased from 30 to 70 oz per diem. The ascites and oedema had now disappeared.

Dr ADAM BOWEN demonstrated a man of 67 suffering from a peculiar fibrillation with ascites. The liver and spleen were enlarged and the feet were oedematous. He had also been treated with urotel. The urine excretion increased but there was no effect on the ascites or oedema. He showed also a girl of 18 who had had an attack of supposed influenza four years ago. Since then she had suffered from attacks of epilepsy. Lately she had developed an upper motor neuron lesion on the right side. She was now suffering also from a habit spasm consisting of a jerk of her head. Her optic discs were normal and there were no signs of Parkinsonism. There was a recent history of a transient diplopia. The suggested diagnosis was that the attack of influenza was really encephalitis lethargica.

Dr PRITCHARD showed the spleen removed from a man of 63 who had had enlarged spleen and liver and enlarged glands in the axillae and groins. The spleen was cirrhotic. The diagnosis was Banti's disease.

In the absence of Mr Smerdon Dr FLEMING read a note on the case of a child admitted suffering from ileocolic intussusception. Mr Smerdon operated and found besides the intussusception a ganglionic appendix. The child made an uninterrupted recovery.

Dr STURGE showed radiograms of a man suffering from fracture calcification of the elbow on whom he had operated with good functional result. He also exhibited a specimen of an ovarian cyst that had contained 16 pints of fluid and read notes of three recent cases of ovarian cyst.

After refreshments had been served Dr STURGE read a most interesting and thought provoking paper on the subconscious mind in everyday life. He covered a very wide field. Owing to the lateness of the hour there was very little discussion.

**EDINBURGH BRANCH SOUTH EASTERN COUNTIES DIVISION**  
A special meeting of the South Eastern Division was held in the Royal Hotel Glasgow on October 28th to meet Sir David Wallace and Professor John Frazer of Edinburgh to consider a scheme for a hospital for cripple children with major and minor amputations for the south-eastern area of Scotland.

Sir David Wallace who was the first called on by the chairman said that the proposal was the result of the urgent need for that had been shown for such a hospital and laid special emphasis on the fact that the scheme was in the nature of a policy which included preventive treatment surgical treatment and after-care.

Professor FRASER referred chiefly to figures stating that in the area there were about 750 cripples of school age alone.

Dr AGNES MACDONALD TYRRELL OLIVER McLAY and DAVIDSON (Hawick) contributed to the discussion in which the visitors made it clear that the proposal was not only not antagonistic to the present hospitals such as the Royal Infirmary and Sick Children's Hospital Edinburgh but was actually advocated by these institutions. Orthopaedic surgery was very much a specialism and required long periods of after-care which could not be given in infirmaries whose accommodation was insufficient for present demands. It was further made clear that the intention was to work in conjunction with the general practitioner and the cottage hospital of the area.

Dr FAIRFAX the chairman afterwards expressed the meeting's appreciation of the trouble to which Sir David Wallace and Professor Frazer had gone and proposed a warm vote of thanks which was seconded by Dr TYRRELL. Dr JOHN S. MITCHELL (Selkirk) moved that as the result of what the Division had heard from Mr Murray and their visitors that day the Division give its hearty approval to the scheme. Dr AGNES MACDONALD seconded and the motion was unanimously carried. Sir David Wallace himself thanked the members for their reception.

### Annual Dinner

The annual dinner of the Division was held in the Royal Hotel Glasgow on November 2nd when Dr NORMAN P. FAIRFAX (Innerleithen) chairman of the Division presided. The guests of the Division were the Earl of Home Mr M. G. Thorburn (Lord Lieutenant of the County of Peebles) and Dr John Stevens (chairman of the Edinburgh Branch). Private guests included Messrs Beely Mercer and Crichton Smith (town clerk of Kelso). The Earl of Home proposed the toast of the evening. The British Medical Association which was replied to by Dr STEVENSON. During the evening a musical entertainment was given by the chairman Dr FAIRFAX and Dr GORDON and Dr PACE while Dr MITCHELL (Selkirk) contributed in his usual manner the modern version of Young Love. The dinner was a very great success and was enjoyed by all. It concluded about 11 o'clock by the company singing Auld Lang Syne.

### METROPOLITAN COUNTIES BRANCH CAMBERWELL DIVISION

A meeting of the Camberwell Division was held at St Giles's Hospital Camberwell on November 15th when Dr Cox chairman of the Division presided and thirty-one members and visitors were present.

Dr ROBERT HUTCHINSON gave a most interesting and instructive address on dyspepsia. He defined the condition as any discomfort felt during digestion and due to organic disease of the stomach or to primary disorder of its functions. For practical purposes the duodenum could be regarded as part of the stomach. Having stressed the importance of diagnosis the lecturer reminded his audience of the numerous other disorders of the body which simulate dyspepsia in their symptoms. Organic disease of the stomach was more common than formerly realised and should always be suspected in the presence of real pain vomiting and wasting. Regarding functional cases Dr Hutchinson considered that undue importance was attributed to the part played by physical causes such as oral sepsis defective teeth etc. and too little attention given to the nervous causes. Dealing with treatment the speaker was of the opinion that surgery was indicated in all chronic cases except gastritis. Functional disorders should have their nervous cause investigated and remedied if possible. Symptomatic treatment should be supplementary.

Dr HUTCHINSON addressed was much appreciated by the meeting and in the subsequent discussion the President Dr BUTTER Dr CLARKE and Dr HEND and Mr MATTHEWS took part.

On the motion of Dr HEND seconded by Dr COX a vote of thanks was enthusiastically accorded to Dr HUTCHINSON for his address.

### METROPOLITAN COUNTIES BRANCH CITY DIVISION

A very well attended clinical meeting of the City Division was held at the Metropolitan Hospital on November 11th when Dr T. H. G. SHORE presided and demonstrated the following cases:

A man aged 50 with leukaemia both in the spleen and the axillary lymphatic glands.

A boy aged 14 with haemophilia who suffered from epistaxis and haemorrhages into joints. He was treated with haemophilin.

A woman aged 32 who suffered from pleurisy and pneumonia. Her spleen which was large had been removed without harm resulting.

Two women one aged 27 the other 29 with pernicious anaemia both patients improved under treatment with large doses of dilute hydrochloric acid.

A man aged 58 with subacute combined degeneration of the spinal cord. He had tingling of the hands and feet and loss of knee-jerks.

A man aged 53 with gastric ulcer who developed pneumonia and a parapneumonic abscess.

A girl aged 15 with aortic stenosis (rheumatic).

A man aged 67 suffering from vulvar cancer at caries due to extension of the external table of the skull.

A man aged 50 with combined diabetes and jaundice.

The meeting terminated with a hearty vote of thanks to Dr Shore.

### METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION

A clinical meeting of the Lambeth and Southwark Division was held at the Belgrave Hospital Clapham Road on November 9th.

It was conducted by Mr SYDNEY BORD who showed many interesting cases the outstanding ones being:

Tom, 11, in a girl aged 3½ operation on September 14th 1927 now doing well at home.

Two cases of bilateral undescended testicle. The first patient, aged 5½ is awaiting operation. The second patient aged 7½ years, has undergone two operations—the first on October 6th 1927 (one side), and the second on October 31st.

Syndactylism, in a boy aged 2 operation on October 6th 1927.  
Hypoplasia in a child aged 4 years second stage operation on October 13th, 1927.

Tuberculous abscess (fourth right costal cartilage) in a boy aged 2 years.  
Naevus of the right breast, cavernous type, in a boy aged 6 months.  
Sarcoma of right kidney, in a girl aged 6½ operation June 7th, 1927.  
Tumour removed weighing 5 lb 6 oz. The patient now has a cyst, probably due to extensive recurrence in the omentum.

#### METROPOLITAN COUNTIES BRANCH LEWISHAM DIVISION

A MEETING of the Lewisham Division was held at the Town Hall, Catford, on November 15th, when Dr W. HALLINAN took the chair, and Mr CHARLES BENNY delivered an address on the urgency of the discharging ear. Mr BENNY advocated the conservative mastoid operation, which improved or saved the hearing, was not dangerous, and stopped the discharge. He read extracts from a papyrus of the time of Moses, showing that drops were then used. The mastoid antrum was affected in all cases of chronic discharge and no drops could reach the antrum. Early operation was required if the discharge continued after three or four weeks. He had abandoned the radical and Schwanitz operation. The advantages of the conservative operation were that the hearing was improved, the dressings were painless, there was no scarring, the patients remained only a short time in the hospital, and the after treatment was simple. The antrum was entered from before backwards, the tympanic membrane was always in view, and the whole of the diseased mucosa was destroyed by pure carbolic acid. The meatus was enlarged. The danger signs of aurial suppuration were: (1) rapid decrease of hearing, (2) headaches on affected side, (3) vertigo, (4) profuse discharge, often with blood, (5) tinnitus. Paralysis was inconstant. Six clinical cases were shown and the operation was demonstrated on a large model ear. Drs FANNON, BUCHAN, HALLINAN, and JONES joined in the subsequent discussion. A vote of thanks was accorded to the lecturer.

Members of the Lewisham Division and their wives inspected the United Danies (London), Ltd premises at 57, Perry Vale, Forest Hill, on November 9th, when they were received by two of the directors Messrs Tustin and Edwards. Following an explanation of the premises, the plant was viewed, after which tea was served. On the motion of Dr BUCHAN, seconded by Dr G. JONES, a vote of thanks was accorded to the United Danies (London), Ltd, for the opportunity of visiting their premises.

#### METROPOLITAN COUNTIES BRANCH TOWER HAMLETS DIVISION

A CLINICAL meeting of the Tower Hamlets Division was held on November 16th at the British Red Cross Society's Clinic Poplar. About thirty members were present. Dr J. SAINSBURY demonstrated various types of electrotherapeutic apparatus, indicating how they were used in different cases. Dr OXLEY the chairman of the Poplar Division of the British Red Cross Society gave a brief account of the history of the clinic, and hoped that the local doctors would continue to support it. The chairman, Dr HASTINGS, proposed a vote of thanks to the lecturer, who briefly responded.

#### MIDLAND BRANCH HOLLAND DIVISION

THE first meeting of the winter session of the Holland Division was held at the Y.M.C.A. Institute, Spring Gardens, Spalding, on November 18th. Mr H. BELL TAYNE gave an interesting and instructive address on some difficulties of the general practitioner in ear, nose and throat cases, illustrated by lantern slides and specimens. The meeting was a very great success, and a cordial vote of thanks was accorded to the lecturer.

#### NORTH-EAST COUNTIES OF SCOTLAND BRANCH BANFF, MORAY, AND NAIRN DIVISION

A MEETING of the Banff, Moray, and Nairn Division was held in the Gordon Arms Hotel, Elgin, on November 18th to hear the British Medical Association Lecture by Professor D. MURRAY LEON, of the chair of clinical therapeutics in the University of Edinburgh, who chose as his subject, 'Asthma—with special reference to its etiology and treatment'. The subject was one which was calculated to appeal to all general practitioners, and was listened to with great attention and appreciation by a large audience. At the close a very cordial vote of thanks was accorded on the motion of Dr JOHN TAYLOR (Elgin), who voiced the gratitude of the members of the Division to the lecturer for having given up so much of his valuable time to come so far to lecture on such an interesting subject. Professor MURRAY LEON, in reply, said he was very gratified at the size of the gathering and the attention with which his remarks had been received.

Later in the evening a dinner was held under the chairmanship of the Division chairman, Dr JAMES TAYLOR (Keith). In addition to the lecturer Lord Provost Wittet was a guest of the evening. In proposing the toast of the British Medical Association Dr H. G. COWIE (Banff) urged the members to throw off a large measure of the apathy at present existing, as no one knew when severe struggle to maintain its dignity and status. The Scottish Medical Secretary Dr DREVER replied in replying to the toast of his health, which had been proposed by Dr TAYLOR (Elgin), the

DIVISION SECRETARY thanked the members for the loyal support they had given him in the past and appealed to them to help him to make the Division, which was considered one of the five Scottish Divisions, the highest. The singing of "Auld Lang Syne" terminated another very successful gathering.

#### NORTH OF ENGLAND BRANCH DARLINGTON DIVISION

A CLINICAL meeting of the Darlington Division was held at the Greenbank Hospital, Darlington, on November 17th, when Dr F. C. PRIDHAM presided. There was a large attendance, not only of members of the Darlington Division, but also of neighbouring Divisions, so that the seating capacity of the hall was overtaxed. The speaker was Professor HUGH MACLEAN who gave an address on the treatment of gastric and duodenal ulcers. He was followed with rapt attention, his matter being so interesting, his subject so thoroughly practical to general practitioners, and his way plates so clear and convincing. A discussion followed and a vote of thanks to Professor Maclean was carried with acclamation.

#### NORTH OF ENGLAND BRANCH SUNDERLAND DIVISION

##### Annual Dinner

THE annual dinner of the Sunderland Division was held at the Palatine Hotel, Sunderland, on November 10th, when Dr HAMILTON ROSS, chairman of the Division, presided. Sir Norman Walker was the guest of the evening.

After the loyal toast had been honoured, Dr W. GRANT WATSON, in proposing that of "Our Guest," referred to the distinction which Sir Norman Walker had attained in the profession as a dermatologist, and as the author of the well known *Introduction to the Study of Dermatology*. Sir NORMAN WALKER, in reply, expressed his gratification at learning that his book found a place upon the shelves of the general practitioners. After referring to the great changes which had taken place in medical and surgical practice during the last forty years he was pleased to note the friendly relations which existed between the medical profession in all districts at the present time. He appealed for the co-operation of all branches and sections of the profession to assist in every possible way in the research work of medicine and surgery. He considered that the medical graduate of the present was better qualified than his fore-runner of forty years ago, the medical profession was without doubt making a great advance in its educational standard.

Mr ALFRED PARKIN (Newcastle on Tyne) proposed the toast of "The Sunderland Division of the British Medical Association," associating with it the name of the chairman. He said that the Division was a flourishing body, and formed a part of the North of England organization, which was almost the backbone of the British Medical Association. Sunderland had he said, provided many prominent secretaries, not only for the Division but for the North of England Branch. They were impressed in Newcastle by the progress being made at the Sunderland Royal Infirmary, a work for which the local Division might fully claim some credit.

The CHAIRMAN replied to the toast. He said that the North of England Branch of the Association was the strongest numerically in England, with a membership of 80 per cent of those practising in the area, while Sunderland was the second strongest Division, with about 83 per cent of those practising in the area as members. He hoped the public and the profession would give early serious attention to the urgent matter of the co-ordination of hospitals.

Dr STANLEY PAW proposed the toast of "The Other Profession," which was acknowledged by Prebendary A. B. WATKINS WILSON and His Honour Judge RICHARDSON. Dr W. MILBANK, in proposing the toast of "Our Honorary Secretary," paid a cordial compliment to the work of Dr R. H. DIX for the Association, and the large amount of time he sacrificed to its interests.

#### SURREY BRANCH GUILDFORD DIVISION

A WELL attended meeting of the Guildford Division was held at the Royal Surrey County Hospital on November 3rd, when Mr H. BRANSON BUTLER, chairman of the Division, presided. After the routine business had been transacted Dr W. L. R. ILLING took the chair, and Mr BUTLER gave a very interesting account of his experiences both surgical and other on a tour through Canada and the United States of America in September last, organized by the Royal Society of Medicine.

Mr E. W. SHEAF gave his impressions of the work of the Mayo Clinic where operations took place daily from 8 a.m. till 11.30 p.m. He said that the vastness of the work could be gauged by the fact that over 20,000 operations were performed there annually. The party were shown over the experimental institute and a number of short lectures were given on recent research there. The whole of the work was, he said, of a universally high standard, actuated by high scientific ideals. During his six days' stay, at Cleveland, spent mostly with Dr Crile, many quite technical things were seen. Dr Crile was a surgeon of great technical skill and originality, he was an indefatigable worker who found time for the most profound researches as well as for an unusual amount of practical surgery. At Baltimore Dr Bloodgood had described some of the results of a cancer campaign. He said that the results had been that before the campaign the bulk of breast tumours seen were malignant, now the innocent variety predominated and Dr Bloodgood considered that dealing with these in their early stages prevented the development of many cases of cancer. Boston they saw much interesting work, and had an opportunity of a very brief view of Dr Harvey Cushing's technique in brain

salary. At every entrance into it both the party as a whole and the individual were shown the utmost hospitality and kindness.

A vote of thanks to Mr Butler and Mr Scait proposed by Dr F. E. Lewis (Pipri) brought a very pleasant meeting to a close.

# SOUTH BRANCH CHICHESTER AND WORTHING DIVISION Annual Dinner

The annual dinner of the Chichester and Worthing Division was held at Warner's Hotel, Worthing, on November 16th. In the absence through ill health of Dr Frank Hind, chairman of the Division, Dr H. J. Milbank-Smith, the vice-chairman, presided. The large company, 111 in all, included three mayors (Worthing, Chichester, and Arundel).

Dr SIMON MATTHEW, in proposing the Mayor and Corporation of Worthing, expressed his difficulty in saying anything about the town, because it was already so well known and he fore-shadowed the time when it would have a population of 75,000 and be a county borough. The Mayor of Worthing, Alderman Fotheringham, in responding, expressed his regret that Dr Hind was absent, and referred to his zealous devotion to duty on the Health Sub-committee of the town council. He expressed pride in the town's health record and mentioned that since 1891 the population had risen from 6,000 to 33,500 while the death rate had fallen from 20 per thousand to 10 per thousand, and the infant mortality from 150 per thousand to 20 per thousand. In this connexion he gave great credit to Dr Willshaw, the medical officer of health.

Dr C. O. HAWTHORNE, Chairman of the Representative Body of the British Medical Association, in proposing The Common Health, said that the health of the community must have a wide appeal and must commend itself to a profession the members of which were doing their individual best to create a nation of sound men and sound bodies. He suggested that dining as a new art was an important contribution to the mental, moral, and social health and happiness, and uttered a warning against the bad practices of the personal health for most people, the best advice was "Practise moderation, cultivate common sense, and think of your health the better."

Dr GRAHAM LITTLE, M.P., who replied to the toast, said that he felt he had done at Worthing. Referring to the present day, he said that he was giving too much thought to food and drink. He thought that the great fault of the new paper medicine was its undue emphasis and rigidity on questions of diet. He suggested that in the first and most important steps to be taken to promote the public health was to induce more doctors to Parliament. This in itself was in the House of Commons did not bear the weight it should.

In proposing Propriety to the British Medical Association, Dr LOCALIA STURGES, spoke of its value in covering as it did the whole of the British Empire, and he commended it to every young member of the profession as the most desirable meeting ground and most profitable communion in the world. Dr L. A. LARSEN, respondent to the toast, in the absence of Dr Alfred Cox, Medical Secretary of the Association, said that the Association had 33,000 members in all parts of the world, and emphasized that it was a democratic body. He gave particulars of the part played by the South Branch and the Chichester and Worthing Division in the affairs of the Association. He said that the profession was doing its best to solve the terrible problem of maternity mortality. The main object of the Association was the common health and the majority of their deliberations had that object in view.

The Mayor of Chichester, Dr ARTHUR BODD, proposed the health of the chairman and honorary secretary of the Chichester and Worthing Division, and Dr D. D. MACINTOSH, in acknowledging the toast, expressed his immense enjoyment of his task. The health of the chairman was proposed in very warm terms by Dr BODD, who described Dr Milbank-Smith as a man of keen energy and enthusiasm.

## WILTSHIRE BRANCH

A GENERAL meeting of the Wiltshire Branch was held at the County Hotel, Haverhill, on November 16th, when the president, Dr C. E. TANG, was in the chair and twenty members of the Branch were present. The president referred to the loss of the Branch and welcomed the death of Dr J. E. Gordon (Salisbury) and a letter from Mrs. Gordon was read, thanking the members of the Branch for their sympathy and for the wreath sent in their name.

The question of the treatment of persons injured in motor accidents referred to the Branch by the Wiltshire Panel Committee was considered, and it was resolved to refer the matter to a committee representing a number of the hospitals in the county, who would draw up a report on the problem with recommendations for the future consideration of the Branch.

Dr D. A. BURCHELL (Bath) read a paper entitled "Antenatal work in general practice," in which he laid stress on the necessity for this work to be carried out by medical men and not by midwives. A general discussion followed, and on the motion of Dr Ede, seconded by Dr HAYDON, it was decided to appoint a subcommittee to consider a scheme for carrying out the work and to report at the next meeting of the Branch. Dr TANG said that he could give an assurance that any scheme put forward by the Branch would be sympathetically received and considered by the County Public Health Committee. It was resolved that the committee be proposed to be set up should be the Medical Advisory Committee, with power to co-opt. A hearty vote of thanks was accorded to Mr Mitchell for his paper. A vote was provided after the meeting by the kindness of Dr Cole and the committee of the institution.

## GENERAL COUNCIL

OF

## MEDICAL EDUCATION AND REGISTRATION

### WINTER SESSION, 1927

THE one hundred and twenty-sixth session of the General Medical Council opened on Tuesday, November 22nd, at its house in Hallam Street, London. Sir DONALD MACALISTER, Bt., K.C.B., presided.

PROFESSOR R. J. JOHNSTONE of Belfast, Professor J. S. B. STOPFORD of Manchester, and Mr. H. W. MONTSARRAT of Liverpool took their seats as members of the Council, the two former for three years as representatives of their universities, and Mr. Montsarrat as successor to the late Mr. Thelwall Thomas as representative of the University of Liverpool until 1930. The appointment was also announced of Professor J. LORRAIN SMITH as representative of the University of Edinburgh for the ensuing five years.

### PRESIDENT'S ADDRESS

The President then spoke as follows:

GENTLEMEN,—Twice during the past summer the Council has had to mourn the death of a distinguished member. In August Professor Harvey Littlejohn of Edinburgh died after a long period of ill health, but full of his wonted intellectual vigour. For twelve years he had served the Council with conspicuous ability and zest, and his loss will be deeply felt in many fields of professional activity. In September Mr. Thelwall Thomas of Liverpool was called away suddenly. He had joined the Council only at the beginning of last year, but already he had approved himself a cheerful and sagacious colleague, and had amply justified the welcome we accorded him on his appointment. Professor R. B. Wild of Manchester has resigned his membership on retiring from his professional chair. For five years he has held office, and the Pharmacopoeia Committee in particular has greatly benefited by his special knowledge and experience in pharmacology and therapeutics.

In the place of Dr. Littlejohn the University of Edinburgh has appointed Professor J. LORRAIN SMITH, the Dean of its Medical Faculty. He is not a stranger to the Council, for in 1912 and 1913 he represented with much acceptance the University of Manchester. We are glad to see him again among us. Liverpool has appointed another eminent colleague to succeed Mr. Thelwall Thomas—namely, Mr. H. W. MONTSARRAT. His reputation for energy and administrative ability has preceded him, and enhances the warmth of our welcome. Dr. Wild is succeeded by Dr. J. S. B. STOPFORD, M.B.L., professor of anatomy in the University of Manchester, and formerly Dean of its Medical Faculty. His contributions to neurological surgery are familiar to many of us. The Queen's University of Belfast has sent us Dr. R. J. JOHNSTONE, professor of gynaecology and member of Parliament in succession to Colonel Sinclair, M.P., who so happily still sits with us in another capacity. To all the new members and to Sir Hilton Young and Sir FARGUHAR BUZZARD who return to us with new and well-earned honours—Sir Farguhar Buzzard announced only to-day—the Council offers its cordial welcome and congratulations.

### The Irish Free State

FOUR members of our body have been appointed to the Irish Free State Medical Registration Council established under the Free State Act, passed in accordance with the recent agreement to which I made reference in my last address. The election of our colleague Dr. COFFEY as President of the Irish Council goes far to ensure its smooth and effective working in co-operation with our own body. The British bill for the ratification of the Irish agreement has passed through the House of Lords. It is expected to come before the House of Commons during the present session of Parliament.

### The British Pharmacopoeia

THE committee considering the question of the method of preparing the next British Pharmacopoeia has practically completed the taking of evidence, and will, I learn,

proceed forthwith to the drafting of its report. But I shall have no fresh information on the subject to communicate to the Council at the present session. We are still waiting the conclusions of the Privy Council Committee on the Poisons and Pharmacy Acts. These conclusions may have bearings on medicine which will call for your consideration at a later date.

#### *Practice in the Dominions*

The Executive Committee has had communications, through the Privy Council, from Quebec, Ontario, and New Zealand, which indicate a disposition in these parts of the empire to withdraw from practitioners registered in the *Medical Register* the privileges of practising within their respective territories which have hitherto been accorded them, in virtue of reciprocal agreements made by Order in Council. The ground for the withdrawal seems, generally speaking, to be a desire to "protect" certain local professional interests. If no modification of the views held by the provincial authorities on this subject can be brought about, the Privy Council will have to consider whether the privileges granted by this country to practitioners from these British possessions now registrable on the Colonial List of the *Register* can justly be continued.

#### *India*

The reports of the Executive Committee, based on the results of the visitations and inspections of Sir Norman Walker and Colonel Needham, have been duly forwarded to the Secretary of State for India, the Indian Government, and the Indian universities. There has as yet been time for little more than formal acknowledgements of their receipt, but from numerous unofficial communications we may gather that the desire of the Council to assist the Indian authorities in their efforts to improve the methods and standards of medical education in India has been gratefully recognized. We further learn that definite steps have been taken to bring before the Central Legislature the question of establishing, by the agency of an all-India Council, some form of control of Indian standards of professional qualification.

It is of interest in this connexion to record that both Sir Norman Walker and Colonel Needham have been severally invited to visit the United States, within the next few months, for the purpose of giving to certain medical authorities in that country the benefit of their special experience in matters of medical education and examination.

#### *The Medical Curriculum*

The Education Committee will probably be able to present to you at this session a final report, setting forth the progress made by the several teaching and examining bodies in this country towards giving legislative effect to the Council's resolutions on the medical curriculum, which came into force in January, 1923. It is satisfactory to observe that, almost without exception, the regulations of the licensing bodies are now in practical conformity with the principles laid down by the Council. The circulation of the final report among the bodies concerned will without question be of service to the cause of professional training and testing. Each body will find something of value for its own use in the experience and practice of the others.

#### *Visitations of Examinations*

The Examination Committee, in like manner, will have a report to submit on the visitations of professional examinations other than the final or qualifying examination. From this report also much may be learned regarding the merits of diverse examination methods and arrangements.

#### *Registration of Students*

The regulations for the registration of medical and dental students have been carefully revised by the Education Committee, with a view to greater clearness and consistency in their statement. The amended form will be submitted for your approval.

#### *Registration of Opticians*

In pursuance of your instructions Mr. Eison and I appeared before the Departmental Committee on the Registration of Opticians Bill, and gave evidence in support of

the memorandum on the subject which appears in the Council's minutes. So far as I am aware the decision of the committee has not yet been published.

#### *Business of the Session*

As is customary at this November session, most of your time will be occupied in judicial inquiries into the conduct of medical and dental practitioners. It is therefore difficult to forecast the length of our sittings, but I see no reason to doubt that they will be completed within the present week.

### National Insurance.

#### LONDON PANEL COMMITTEE

##### *Dinner Dance and Presentation*

THE London insurance practitioners' eighth annual dinner and dance will be held at the New Princes Galleries, Piccadilly, on Thursday, December 1st, at 8 p.m., reception at 7.30. The dinner and dance are open to all practitioners and their friends. Tickets, 17s. 6d. each (exclusive of wines, but including light refreshments during dance), or dance tickets only (7s. 6d. each, inclusive of light refreshments during dance) may be obtained from any member of the London Panel Committee or from Dr. C. L. Bitteson (17, Russell Square, W.C.1). An added attraction to practitioners attending the dinner will be the presentation which will take place immediately afterwards to Dr. H. J. Cardale, chairman of the London Panel Committee, as a recognition of his sterling services on behalf of members of the medical profession working under the Insurance Acts.

### Correspondence

#### *Ophthalmic Clinics for Insured Persons*

SIR,—In the SUPPLEMENT for November 12th (p. 194) "Ophthalmic Surgeon" expressed surprise that the question of establishing ophthalmic clinics had been allowed to pass unchallenged by ophthalmic surgeons. It has not. In view, however, that I have written several letters on the subject, but the Ophthalmic Committee of the British Medical Association seem determined to have clinics.

From what I can gather it is proposed that ophthalmic specialists are to see patients in a building provided by the approved societies, and they will also do the clerical work, the rate of remuneration being 8s. 4d. per head.

In order to bring the cost of ophthalmic benefit within the means of the societies I have suggested, as a compromise, that the cost be reduced to 15s. 6d., of which the societies find 10s. 6d., the balance of 5s. is provided by the member to the society on application for ophthalmic benefit, as absence from work attending a clinic would probably cost him that amount. But I agree with your correspondent that if it is a question of a clinic or the present system, let us have the present one.

Should the clinic system be adopted it would mean the abolition of free choice of specialists, and the doctor would once again be a servant of the societies. If adopted for specialists it might be tried on panel practitioners, the visiting could be done by district surgeons. In fact, no sooner do general practitioners escape from the societies than our own heads are suggested that ophthalmic surgeons should become club doctors.

I cannot do better than conclude with the words of your correspondent. Let us by every means in our power preserve the principle of private practice—I am, etc.,

Southease Nov 15th

I. C. D. CHITING

#### *Insurance Practice Limitation of Lists*

SIR,—I read with surprise Dr. Brackenbury's address to the Incorporated Association of Approved Society Secretaries reported in the BRITISH MEDICAL JOURNAL SUPPLEMENT of November 12th (p. 189). There are two points which I would like to criticize: (1) the comparison of insurance work with that of a hospital out-patient department, (2) the remarks on the limitation of panel lists.

I practise in an industrial town in Scotland, where the great bulk of the work is national health insurance. My panel is at present about 2,250. I consult at my house five evenings a week for an average of two and a quarter hours each evening. My average number of patients per evening is 28. The panel visiting list is about 12 per day at present for six days a week. In summer the evening consulting drops to 20 and the visiting to 6. Each patient, when shown into my consulting room, brings his record card with him, this has been handed to him on entering. The card is kept up to date by entries made,

#### CURRENT NOTES

##### Annual Meeting Cardiff 1923

The ninety-sixth Annual Meeting of the British Medical Association will be held in the latter part of July 1928 - Cardiff under the presidency of Sir Ewen Mackinn, M.D., F.R.C.P., Professor of Obstetrics and Gynaecology in the Welsh National School of Medicine and senior gynaecologist to King Edward VII's Hospital, Cardiff. The President-Elect, it will be recalled, was Chairman of the Representative Body of the Association in 1911-12. The Annual Representative Meeting will open on Friday, July 20th, Sir Ewen Mackinn will give his Presidential address to the Association at the adjourned Annual General Meeting on Tuesday, July 24th and the Sections will meet on the three following days. The scientific and clinical work of the Cardiff meeting will be divided among eighteen Sections, and we publish below the names of the Sections and their President. The Honorary General Secretary of the meeting is Dr Gilbert Strachan. The full list of officers of Sections and further information about the meeting generally, will appear in later issues.

THE BRITISH MEDICAL ASSOCIATION'S HOUSE, TAVISTOCK SQUARE, LONDON

#### Sections and their Presidents

Medicine.—Sir THOMAS LEWIS CBE MD FRS FRCP (London)  
Surgery.—Professor A. W. GREEN CBE MS FRCS (Cardiff)  
Obstetrics and Gynaecology.—T. WATTS EDE MD FRCP (London)  
Pathology and Bacteriology.—Professor E. H. KENTLE MD FRCP (Cardiff)  
Mental Diseases and Neurology.—EDITH GOODALL CBE MD FRCP (Cardiff)  
Orthopaedics.—Sir JOHN L. THOMAS KBE CB CMG FRCS (Edinburgh)  
Diseases of Children.—ALFRED HOWELL MD (Cardiff)  
Opthalmology.—P. S. CHESTNUT MB FRCS (Cardiff)  
Laryngology and Otology.—DONALD R. PATTERSON MD FRCP (Cardiff)  
Tuberculosis.—H. MORRISON DAVIES M.D. M.Ch. FRCS (Glasgow)

Radiology and Physiotherapeutics.—OWEN LEWELLEN BAJS D (Cardiff)

Therapeutics and Pharmacology.—W. LANGDON BROWN MD FRCS (London)  
Dermatology.—Sir ROBERT BOLLIE MD LL.D. FRCP (Cardiff)

#### Some Work of the Week

Under this heading we continue to publish short notes on some of the main items or current business dealt with at headquarters by the various committees or the

British Medical Association. All the committees report periodically to the Council. A good deal of their work, in the nature of things, is confidential or preparatory and does not lend itself to publication at any rate during the earlier stages or discussion but it is thought that members will be glad to have, from time to time, a few indications of what is being done at the centre.

#### Puerperal Morbidity and Mortality

The Committee on the Causation of Puerperal Morbidity and Mortality has reached a point in its labours at which it can profitably discuss the subject of its reference with other bodies. It was accordingly decided, at the meeting of the committee on November 20th, to call a representative conference on January 11th 1928 and to arrange for a discussion embracing the general position in regard to puerperal morbidity and mortality in this and other countries. It is proposed to secure short papers by a suitable research worker on the present state or research in the subject by a representative of the Ministry of Health from the point of view of the Ministry, by a general practitioner a medical officer of health and a representative of the Central Midwives Board. A précis of the papers to be read before the conference will be circulated in advance in order to facilitate a really useful discussion. An account of the conference will be before the committee then.

it comes to consider the preparation of its final report to the Council, and it is hoped that the final report will be available for circulation to the Divisions and for discussion by the Annual Representative Meeting in 1928. The committee has appointed a subcommittee, consisting of the chairman and deputy-chairman of the committee (Sir E. Macleod and Dr T. Watts Eden), Lady Burnett, Dr J. W. Bone, Dr C. E. S. Flemming, and Dr Everard Williams, which will endeavour to obtain some figures as to the comparative results secured where ante-natal supervision has been exercised and where it has been omitted. It is to be hoped that the inquiries of this subcommittee will meet with a better response than those hitherto sent out by the committee, the answers to which have so far been somewhat disappointing. While individuals can always be found to present reports of considerable interest, it seems far more difficult to secure the comprehensive series of figures essential as the basis for any sound conclusions.

#### *In International Medical Sea Code*

At its October meeting the Council of the Association appointed an *ad hoc* committee to consider the possibility of the formulation of an international medical sea code. The committee was to include, in addition to the *ex officio* officers, representatives of the Admiralty, the Board of Trade, the Postmaster-General, the Ministry of Health, the Cunard, White Star, Canadian Pacific, and P. and O. Steamship Companies, Commander Loring (Inspector of Wireless Telegraphy), Dr T. J. O'Donnell (Secretary of the Marine Section of the Association of Wireless Telegraphists), Dr D. F. Macintyre (editor of the *Ship Captain's Medical Guide*), Dr J. W. Bone, and Dr W. Piterson, with power to add not more than two additional members. The committee held its first meeting on November 24th, and elected Dr J. W. Bone (Luton) chairman. The representatives appointed by the several authorities named in the reference to the committee are as follows: Admiralty, Surgeon Captain T. B. Shaw, Board of Trade, Mr A. S. Hoskin, Postmaster-General, Commander Loring (deputy), Colonel C. G. & Crawley, R.M., Ministry of Health, Sir George S. Buchanan, Cunard Steamship Company, Dr T. Gwynne Maitland, White Star Line, Dr W. H. Broad, Canadian Pacific Steamships, Dr J. J. Hummel, P. and O. Steam Navigation Company, Dr Arnold Chaplin. The vacancies for co-opted members have not yet been filled. The session was occupied by a general discussion of the whole subject from the widely differing points of view of the several bodies represented, as a result of which it was decided that, in the opinion of the committee, there is a *prima facie* case for further consideration of the question of formulating an international medical sea code. The committee will resume its discussion in January.

#### *Meeting of the Dominions Committee*

The Dominions Committee, on November 25th, elected Dr W. Piterson (Willesden) chairman for the ensuing session. The committee had before it matters referred from the East African, Ceylon, Indian, and Malayan Branches, and from Palestine. It would seem that, for the time at least, a position of stable equilibrium has been reached in the East African and Malayan Medical Services, and that the Branches concerned consider that, in the main, conditions in these services may be considered reasonably satisfactory. The Ceylon Branch is at present facing a very serious threat to the progress of scientific medicine in the island. A committee was appointed by the Government to report

whether it is practicable for the Government to assist, financially or otherwise, in the training or those seeking to qualify themselves as practitioners of indigenous systems of medicine, and in the investigation of the medicinal value of the drugs used by those practising such systems, and, if practicable, to prepare a defined scheme of such training and investigation for the consideration of the Government.

This Committee reported in October, 1926, in favour of the constitution of a board of indigenous medicine to deal with all matters connected with the education of those seeking to qualify themselves as practitioners of the indigenous systems of medicine, the establishment of a college, with a hospital and outdoor dispensary attached, for training practitioners of these indigenous systems, the creation of a research institute in connexion with the Government

analyst's department, and the establishment of schools of pupils for the study of the Ayurvedic, Unani, and Siddi systems. A strong minority report, signed by the three qualified medical practitioners who were members of the committee of eleven, supplies an able criticism of the conclusions and proposals in the majority report, and this minority report the Ceylon Branch of the British Medical Association strongly supports. The Association has already made representations to the Colonial Office centrally in this connexion, and has received the assurance that when the matter is referred to the Colonial Office by the Government of Ceylon its representations will be considered. In view of the gravity of the situation as now reported from Ceylon additional representations are being made to the Colonial Office.

#### **Help to Individual Members**

The Association is in possession of a very large amount of information on all matters affecting medical practitioners in their professional lives. It is thus often able to help members individually in difficulties of a professional nature, and doing so constitutes a considerable part of its daily work. The Medical Department alone has some 5,000 files, dealing with all branches of medical activity. The Intelligence Department, besides assisting in the collecting and recording of information, has a supply of press cuttings on matters concerning the profession, and this information, together with that arising in the course of correspondence, is so far as possible filed in such a way as to be readily available for the help of members through the medium of the Editorial and Medical Departments. Inquiries by members, whether through the honorary secretaries of Divisions or Branches, or otherwise, on any matter of doubt or difficulty affecting them in their professional capacity are welcome, such inquiries should be addressed to the Medical Secretary. Expert opinion on medico-legal questions is affecting the profession is published in the *BRITISH MEDICAL JOURNAL*. The Solicitor of the Association is consulted when legal matters arise which affect the general interests of the profession.

### **Association Notices**

#### **BRANCH AND DIVISION MEETINGS TO BE HELD**

**BIRMINGHAM BRANCH.** COVENTRY DIVISION.—A meeting of the Coventry Division will take place at the Coventry and Warwickshire Hospital on Tuesday, December 6th at 8.30 p.m. Mr M. Anderson will read a paper on carelessness of the return.

**CAMBRIDGE AND HUNTINGDON BRANCH.**—A meeting of the Cambridge and Huntingdon Branch will be held at Addenbrook Hospital, today (Friday, December 2nd) at 2.30 p.m. Agenda: (1) "Convulsions in childhood," Dr L. B. Cole, (2) "Headache due to nasal diseases," Mr A. S. H. Walford.

**DORSET AND WEST HANTS BRANCH.** WEST DORSET DIVISION.—A meeting of the West Dorset Division will be held on Wednesday, December 14th at 2.45 p.m., at the Yeastown Hospital, Sherborne. Cases will be shown and discussed. Dr J. Girard Pearce will read a paper entitled "The problem of the neurotic abdominal test." Tea will be served at the close of the meeting. Members in North Dorset are particularly requested to note this date and to attend the meeting.

**EAST YORK AND NORTH L. Y. BRANCH.** EAST YORKSHIRE DIVISION.—The committee of the Scarborough Division have invited the members of the East Yorkshire Division to their second annual dance at the Crown Hotel on Thursday, December 8th.

**FIFE BRANCH.**—A clinical meeting of the Fife Branch will be held in the Maternity Home, Townsend Crescent, Kirkcaldy, on Thursday, December 15th at 3.30 p.m. Mr J. W. Struthers (Fifeburgh) will address the meeting on the surgical treatment of duodenal ulcer.

**GLOUCESTERSHIRE BRANCH.**—A meeting of the Gloucestershire Branch will be held on Thursday, December 8th at the Police Infirmary, Gloucester, at 6 p.m. Agenda: Report of representatives to Annual Representative Meeting, discussion "New growth of the breast." Supper at the Spread Eagle Hotel after the meeting (5s. each, exclusive of wine).

**KENT BRANCH.** ASHFORD DIVISION.—A meeting of the Ashford Division will be held in the North Street Club on Wednesday, December 7th, at 4 p.m. Dr W. J. Adie, physician to the National Hospital and to Charing Cross Hospital, will address on some sudden attacks of nervous origin.

**KENT BRANCH.** ISLE OF THANET DIVISION.—The annual dinner of the Isle of Thanet Division will be held on Thursday, December 15th, at the Albion Hotel, Broadstairs, at 7.15 for 7.30 p.m. Tickets 6s. (exclusive of wine). Members are asked to notify the honorary secretary of their intention to be present not later than Monday, December 12th. It is hoped that members will make a special effort to attend and bring guests.

Dr LE FLEMING said that this was a most opportune moment for such a discussion to be held as the very next day a bill was to be presented to Parliament a king for privilege for doctors in certain cases which came into the courts this was to protect patients attending venereal diseases clinics He said that the policy of the British Medical Association which represented over thirty thousand doctors was that there were occasions when a doctor should absolutely refuse to divulge professional secrets and that if a doctor was committed for contempt of court for so doing he would be backed by the full power and resources of the Association There were three great arguments for doctors being given privilege In the first place he was in honour bound not to betray confidence and in this connexion Dr Le Fleming mentioned three cases where a judge ruled that if a doctor answered questions put to him he would be betraying confidence imposed in him by a patient and that he need not therefore answer them Secondly there was no question but that the public demanded a limited privilege this was exemplified by a recent leading article in the *Times* and it was obvious that a nation would not confide a complete civil in a doctor as a central factor in the treatment of a doctor did not have a certain privilege it was therefore in the interests of the public that this should be recognized in the court He would like to mention one case where the court asked for some notes on a certificate from the Ministry of Pensions and this request was not granted—amongst the too as they were confidential He thought it a curious anomaly that a doctor practising in the venereal diseases clinic though under an obligation to the Ministry of Health to divulge any information derived from the clinic should be made to back his word by the court. Lastly he

wished to point out that in almost all the European countries, and in some of the States of America, doctors were privileged in the courts.

Mr MARSHALL HARVEY (Legal Society) said that whether or not a doctor should act as an informer was left to the conscience of the doctor. He stated that, as a general principle, there was no rule which did not occasionally work a hardship, but laws were made for the good of the public as a whole, and not for the individual. He suggested that where a doctor did not want to answer a question he should appeal to the judge, who would not press the question if it were not vital to the issue. Often medical evidence was the most important in the case, and if this was shut out justice could not be done on half a story, and surely this was not in the best interest of the public.

Dr L. A. WEATHERLY said that he had been asked at very short notice to speak for Dr Moise, who was ill. He referred to the address by Lord Riddell to the Medico-Legal Society of London a short while ago on this subject. Dr Weatherly then pointed out that in Scotland medical privilege was recognized, and that a doctor could be sued for slander if he broke confidence in court. He then made the suggestion that if a doctor was not granted privilege he should be allowed to give his evidence *in camera*. [A letter by Dr Weatherly, amplifying his remarks, is printed in the JOURNAL at page 1055.]

Mr D'ANGIBAU (Legal Society) said that ever since 1776 it had been recognized that doctors were not privileged persons, and a law which had been in force for so long would be difficult to change. He explained that a solicitor or barrister was acting on behalf of a client, and was his mouthpiece, whereas a doctor was only a witness, and it was therefore impossible to compare the position of a doctor with that of a lawyer. Out of the very large number of professional secrets confided in a doctor, what very small number was he asked to divulge under compulsion?

Mr STANBURY (Legal Society) said that the function of a court was to get at the truth, and this could not be arrived at, in a great many cases, if the doctor did not give evidence.

Dr SIMMONS said that the question was, What was for the good of the public? and the answer to this was that the doctor should not be compelled to divulge secrets, or patients would not come for treatment or confide in him as they should.

Mr MAUD (Legal Society) expressed the opinion that both doctors and priests should be privileged persons in courts of law.

Mr POWELL (Legal Society) said that if a doctor practising in a venereal diseases clinic was privileged, and he claimed the privilege in court not to answer a question, it would be patent to all from what source he got the information which was asked of him.

Dr RAMSAY thought that Dr Lo Fleming was too modest in his demands in his opening speech. The doctor was on his honour not to betray professional secrets, and therefore he should not do so. He for one would refuse to do so, and would risk the penalty.

Dr LE FLEMING, in his reply, said that he was very disappointed with what he had heard from the members of the Legal Society, they had not tried to refute his arguments or state their supporting medical privilege, but he supposed that that was because they were not able to do so.

Dr HOW WHITE (chairman of the Division) then thanked the Legal Society for their invitation to the joint meeting and for their hospitality.

#### METROPOLITAN COUNTIES BRANCH MARYLEBONE DIVISION

A MEETING of the Marylebone Division was held at the House of the British Medical Association on November 25th, when the chairman, Dr JONSON HORNE, presided. In the absence of Dr Masterman through illness, his paper was read by the HONORARY SECRETARY. The paper pointed out that the beds available in the London teaching schools numbered 5,025, and in the municipal hospitals 21,753. It drew attention to the excellence of the buildings of many of the municipal hospitals and to the work they were already doing in the way of surgical operations, the treatment of the ordinary sick, of accidents, emergencies, maternity cases, tuberculosis, paying patients and all varieties of acute and chronic illnesses, and the important part they were taking in the training of general and maternity nurses. Cooperation between the two hospital services was advocated as the alternative to (1) all hospitals becoming State hospitals, or (2) the municipal hospitals organizing a full service of their own, with consultant and visiting staffs independent of the voluntary hospitals.

The chief points emphasized during the ensuing discussion were: (1) the inadequacy of hospital accommodation in London the long waiting lists and the difficulty of getting patients admitted; (2) the scarcity in the teaching hospitals or resident posts for newly qualified men and women; and (3) the understaffing of the municipal hospitals. Cooperation between the two services was advocated with an interchange of staffs, students, nurses, and patients.

The following members took part in the discussion: Mr BISHOP, Mr DR HOLLIS, Dr POGGIE HUTCHINSON, Mr MCINTOSH, Dr FOLLES, Dr GRAHAM LITTLE, Dr STUBBS, Dr ROXBURGH, Dr SEWELL, Dr BATES, Mr DODDERVILLE HASTINGS, Mr SALGATELL SILLMONDS, and Dr TEMPLE GREE.

#### METROPOLITAN COUNTIES BRANCH WILLESDEN DIVISION

A MEETING of the Willesden Division was held at the Willesden General Hospital on November 16th.

Mr H. S. SOUTTAR read a short paper on minor malades of the rectum, showing how many of them could be cured by simple means. Discussing hemorrhoids, he pointed out the essential distinction between internal and external hemorrhoids, the former being varicosities of the anal canal, whilst the latter were probably due to the rupture of subcutaneous veins at the margin of the anus. Internal hemorrhoids produced symptoms either by bleeding or prolapse. The bleeding was sometimes very profuse, but was more often small in amount, although even in this case it might lead to quite severe anaemia. Prolapse might only occur when the bowels were opened, but in some cases it might occur at any time and cause severe discomfort. Should a prolapse become strangulated the pain was at once very severe. External hemorrhoids usually appeared quite suddenly and were acutely painful. A small firm swelling was found at the margin of the anus, so tender that the patient would not allow it to be touched. The pain could, however, be immediately relieved by making a small incision under local anaesthesia and turning out the clot. In the treatment of hemorrhoids Mr Souttar laid great stress on the use of carbolic injections, with which he had obtained excellent results. Through a rectal speculum each pile was injected with a few minims of 20 per cent carbolic acid in equal parts of glycerine and water. The result was immediate swelling of the pile, which afterwards shrank from interstitial fibrosis. It was essential never to insert the needle below the white line where the skin surface met the rectal mucosa, and to avoid the front of the anal canal, as injection in that region produced irritation of the trigone of the bladder. The method was almost entirely painless, and was as successful in stopping bleeding as in curing prolapse. The pathological anatomy of fistulae was described and a method of treatment was advised by which they could in many cases be got to heal without the usual long period of disability. Under local anaesthesia a short section of the fistula was slit up and allowed to heal by granulation. A week later the operation was repeated, and the procedure was repeated until the fistula was entirely cured or reduced to such small dimensions that its treatment by the usual methods was easy. In most cases, however, cure was rapid and complete. The patient led his ordinary life and the inconvenience was trivial.

After numerous questions had been asked and answered, a cordial vote of thanks to the lecturer for an exceptionally interesting and practical address was moved by Dr W. WOOLLEY STOKER, seconded by Dr C. WHITEHALL COOKE, and passed unanimously.

#### Annual Dinner

SOME three years ago the Division decided to extend the scope of its activities on the social side by the inauguration of an annual dinner, to be attended by members and their guests. The third of these annual events was held at the Criterion Restaurant on November 20th. The increasing popularity of the occasion was attested by the enlarged attendance over previous years. The guests of honour were Mr DUNCAN C. L. FITZWILLIAMS, Dr CHRISTOPHER M. MURRIEL and Dr REGINALD MILLER.

The toast to the Willesden Division was proposed in a witty speech by Mr FITZWILLIAMS. In his reply Dr J. WALKER BROWN, the chairman of the Division, spoke in hearty terms of the spirit of co-operation in which the many past chairmen, still members of the Division had assisted in the work of the Division. He also paid a well deserved tribute to the honorary secretary, Dr WILLIAM PATTERSON, whose unremitting zeal backed by his intimate knowledge of the organization and administration of the Association rendered him the Division's most indispensable member.

Dr CHRISTINE MURRIEL and Dr REGINALD MILLER both responded with graceful speeches to the toast of "The Guests" proposed by Dr C. F. T. SCOTT and the toast of "The Chairman" was proposed with characteristic Irish levity by Dr KATHLEEN O'BRIEN.

The success of the evening was largely due to the delightful entertainment provided by Miss Mignon Trevor, the Australian contralto from the Guildhall School of Music. Miss Jose Malone of the British National Opera Company, and Dr C. de B. THOMSON, Miss Trevor and Miss Malone rendered a number of charming solos and duets, and Dr THOMSON sang two very pleasing baritone solos.

#### SOUTHERN BRANCH PORTSMOUTH DIVISION

A CLINICAL meeting of the Portsmouth Division was held at the Royal Portsmouth Hospital on November 21st. Cases and special men were shown by Messrs BLACKBURN, LARCOM, PARSONS, ROBERTSON, ORD, MARTIN, DAVIS, TAYLOR, MULVAY, JONES, LITTLE, HILLMAN, LUNN, PIPROU and LOANE. The out-lying case was shown by Dr J. A. McVIE, a case of a lady, suffering from secondary carcinoma of the lung treated by lead with apparently complete cure. There were forty-two members present at the discussion and tea was given by the staff of the Royal Portsmouth Hospital.

#### YORKSHIRE BRANCH BRADFORD DIVISION

THE annual dinner of the Bradford Division was held at the Great Northern Victoria Hotel Bradford on November 24th. The chairman of the Division, Dr W. WILKINSON, O.B.E., presided. The Lord Mayor in proposing the toast of "The Bradford Division" spoke of the close co-operation which existed between the health and education authorities and the municipal authorities in the city. Dr WILKINSON replied to the toast of "The Guests" which was proposed by Mr JAMES PURVIS. The dinner was presided over by Dr JAMES PURVIS and the performance of vocal music and an exhibit of conjuring.

# The British Medical Association.

PATRON HIS MAJESTY THE KING

President Sir ROBERT PHILIP M.D., LL.D., F.R.C.P.E.D.,  
Honorary Physician to the King in Scotland Consulting Physician Royal Infirmary, Edinburgh.

## AN OPEN LETTER TO NON-MEMBERS

DEAR SIR OR MADAM

The close of the year affords an opportunity to draw your attention to the chief aims of the British Medical Association and to give you some information as to its work and organization

### OBJECTS

The BRITISH MEDICAL ASSOCIATION the largest oldest and most powerful of British medical organizations was founded in 1832 to promote the medical and allied sciences to maintain the honour and interests of the medical profession and to foster a feeling of friendship among the members of the profession The work of the Association is thus fourfold (i) It acts for the profession collectively throughout the Empire in medical matters affecting the common weal (ii) it guards the profession against unfair attack whether legislative or other (iii) by its work in promoting medical science and the spirit of comradeship it helps the individual practitioner to be more efficient and of greater use to the community and (iv) it helps its members individually

With these aims in view the Association and its local groups—namely the Divisions and Branches mentioned below—hold many thousands of meetings yearly at which medical medico-sociological and allied subjects are dealt with nor is the social side forgotten It publishes the BRITISH MEDICAL JOURNAL the *Archives of Disease in Childhood* the *Journal of Neurology and Psychopathology* an Annual Handbook a Handbook for Recently Qualified Medical Practitioners and other publications gives scholarships grants and prizes for clinical and research work owns a commodious building for the housing of its central activities is in possession of very considerable funds and resources and spares no effort in assisting its members individually in all aspects of their professional lives

### ASSOCIATION PREMISES

The new House of the Association at Tavistock Square London opened in the summer of 1925 by His Majesty the King is a popular meeting place for its members when visiting London There are also Houses or Offices of the Association at Adelaide Brisbane Capo Town Dublin Edinburgh, Melbourne, Perth (W.A.) Sydney Wellington (N.Z.) and elsewhere

### CONSTITUTION AND ADMINISTRATION

The Association is practically a federation of local medical societies called Divisions A Branch is a Division or (more frequently) group of Divisions A member of the Association is *ipso facto* a member of the Division and Branch in the area of which he or she lives The Divisions and Branches and the Association of which they form part are democratic bodies the government of which is in the hands of their members

The funds and resources of the Association are commensurate with a membership of over 33 500

The general control and direction of the policy and affairs of the Association are vested in the Representative Body, which is elected by the Divisions throughout the Empire and meets annually The Council or executive of the Association is elected partly by the Branches throughout the Empire and partly by the Representative Body and also includes representatives of the Royal Naval Royal Air Force Army and Indian Medical Services Among the Committees of the Association are Ethical Finance Hospitals Insurance Acts Journal, Medico-Political and Parliamentary Naval and Military Organization Public Health Science Scottish Irish Welsh, and Dominions Committees The Insurance Acts Committee is the executive of the Annual Conference of Representatives of Local Medical and Panel Committees which are the statutory local professional committees under the National Health Insurance Acts

### PRIVILEGES OF MEMBERSHIP

The privileges of a Member of the Association include —

1. Participation in the clinical, scientific, medico-political, ethical, and social activities of the Association local and central
2. Receipt weekly, free by post of the BRITISH MEDICAL JOURNAL and its SUPPLEMENT one of the leading medical journals of the world and one of the most widely read
3. Participation in the government of the Association, local and central and in the formulation of its policy
4. Use of the Headquarters Houses of the Association At the London House the facilities include Reference and Lending Libraries club room accommodation with facilities for refreshments garage and telephone facilities. From the Lending Library Members (British Isles) can borrow books free of charge
5. The advice and help of the Central Staff in matters affecting him or her individually

### SOME RECENT ACTIVITIES

Some of the activities of the Association during 1927 are summarized in page 1040 of this issue of the JOURNAL. Of special practical interest is the inauguration of the British Medical Bureau incorporating the old-established Scholastic Clerical, and Medical Association Ltd All kinds of medical agency work will be undertaken by the Bureau including transfers and partnerships at home and abroad introduction of assistants and locum tenens valuations accountancy and introduction of resident patients Members of the British Medical Association have the advantage of a reduced scale of charges The question of the protection of medical

practitioners in connexion with the working of the Lunacy Acts has been receiving the special attention of the Association in view of the prospect of early legislation. Collective investigations of varicose ulceration and its after-history of gastro-enterostomy are being instituted throughout the country. The question of the procedure for dealing with complaints against National Health Insurance practitioners was raised with the Ministry of Health, with the result that important alterations have been made in the Medical Benefit Regulations, and an entirely new and purely professional committee is to be set up within the Ministry, for the purpose of advising the Minister in every case involving questions of professional conduct before he promulgates his decision. Progress is being made with regard to securing a more general support throughout the Association for the medical charities.

The Association's work benefits every member of the profession, and as this work can be made more and more effective as it includes more and more practitioners, the Association unhesitatingly claims the support of every medical man and woman who is registered in the British Empire.

#### APPLICATION FOR MEMBERSHIP

You are most cordially invited, if not already a member of the Association, to apply for membership, and I would especially direct the attention of practitioners resident outside the British Isles, and of those recently qualified, to the liberal concessions made to them as regards subscription. Members of the Medical Services of the Navy, Army, Air Force, and India, on whose behalf the work of the Association is unceasing and invaluable, also enjoy a substantial concession in this respect.

The form of application for membership, printed at page 11 of this SUPPLEMENT, should be signed and sent to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

Inquiries as to the work of the Association are welcomed.

*Alfred Cox*

Medical Secretary.

## GROWTH OF THE ASSOCIATION.

### FIFTY YEARS' PROGRESS

THE British Medical Association had its origin in a meeting of fifty medical men held in the Board Room of Worcester General Infirmary in July, 1832, with the Founder, Sir Charles Hastings, in the chair. The Association is thus in its ninety-sixth year. Our diagram shows the membership figures for the last fifty years.

From 1832 to 1854 the growth was slow, but in the latter year the figure of 2,000 was reached. Three years later, in 1857, the weekly Journal of the Association was issued for the first time under the title of the *BRITISH MEDICAL JOURNAL*. The *SUPPLEMENT* began to be published in 1904. The average issue of the Journal is now 36,850 copies a week.

From 1866 to 1912 the membership rose in staircase fashion from 2,462 to 26,568. In some of those forty-six years the step was comparatively small in others large, but the ascent was continuous.

The rapid rise in 1911 and 1912 was due to the professional upheaval that followed the introduction of the National Insurance scheme. Many practitioners who joined the Association solely on that account resigned soon afterwards and the fall from 1913 to 1918 was due to that and to the dispersal of a large part of the profession during the war. Since 1918 the ground lost has been far more than regained.

In 1914 the annual subscription was raised to 2 guineas, and this may have contributed in some degree to the fall in membership. Nevertheless, though the subscription was again raised, in January, 1921, to 3 guineas, no decrease of membership followed. On the contrary, the total number of members has grown year by year, and during the past twelve months there has been a further net gain of 1,300. The membership is now 33,600, representing an increase of 13,500 since the war, and of 9,000 during the past five years.

# BRITISH MEDICAL ASSOCIATION.

FOUNDED 1832

Patron HIS MAJESTY THE KING

THE BRITISH MEDICAL ASSOCIATION is established for the promotion of the Medical and allied Sciences, and the maintenance of the honour and interests of the Medical Profession. It has Divisions and Branches throughout the British Empire. There are 3 Branches, with 217 Divisions, in the United Kingdom, and 50 Branches, with 63 Divisions, in the British Empire Overseas.

Any Medical Practitioner registered in the United Kingdom under the Medical Acts, any Medical Practitioner who does not reside within the area of any Branch of the Association and who, though not so registered, is possessed of any qualification entitling him or her to be so registered, and any Medical Practitioner residing within the area of any Branch of the Association not in the United Kingdom who is so registered or possesses such medical qualification as shall (subject to the By-laws) be prescribed by the Rules of the said Branch, is eligible as a Member of the Association. Members of the Association are *ipso facto*, Members of the Division and Branch in the areas or which they reside.

The liability of Members is limited.

The annual subscription, which is due in advance on January 1st in each year, and entitles the Member to all the ordinary privileges of Membership of the Association, including Membership of the Division and Branch in which he or she resides, and the weekly supply of the *British Medical Journal*, post free, is as follows—

**(A) Members resident in the British Isles**

Ordinary Subscription	£3 0s
Member of not less than 40 years standing	£2 2s
Member of not less than 10 years standing retired from practice	£2 2s
Member engaged whole time in medical instruction or research and not in practice	£2 2s
Newly qualified practitioner elected within 2 years of registration	£1 11s 6d.
(up to end of 1st year after registration)	
Two Members being husband and wife residing together	£4 14s 6d.

**(B) Members resident outside the British Isles**

Member resident within the area of a Branch	£1 11s 6d.
Member resident where no Branch is organized	(or more according to Rules of Branch) £1 11s 6d.

**(C) Wherever resident**

Officer on the Active List of the Royal and Royal Air Force Regular Army or Indian Medical Service	£2 2s
----------------------------------------------------------------------------------------------------	-------

In the case of a Member elected after June 30th in any year, the subscription for that year is one-half the current annual subscription.

If you desire to become a Member of the Association, please fill in and post this form to the Association, British Medical Association House, Tavistock Square, London, W.C.1 with a cheque or postal order for your first subscription. Cheques or postal orders should be crossed and made payable to "The British Medical Association." Payment is ordinarily by the Council or the Branch in the area of which the Candidate resides, but in the case of Candidates resident in any area outside the United Kingdom where no Branch is organized is by the Council of the Association. In the case of most Branches no signature other than that of the Candidate is required (for Branches which require approving signatures see overleaf). For election by the Council (as above) two approving signatures are ordinarily required. Under no circumstances are approving signatures necessary in the case of Officers of the Royal Naval, Royal Air Force, Army, Indian, or Colonial Medical Service, on the Active List.

## APPLICATION FOR ELECTION

TO THE BRITISH MEDICAL ASSOCIATION,  
BRITISH MEDICAL ASSOCIATION HOUSE, TAVISTOCK SQUARE, LONDON, W.C.1

I, \_\_\_\_\_  
a Registered Medical Practitioner, am desirous of being and hereby apply to be elected a Member of the BRITISH MEDICAL ASSOCIATION, and I agree if elected to pay the subscription and to abide by the Articles and By-laws of the Association for the time being in force, and the Rules of the Division and Branch to which I may at any time be assigned.

## GENERAL COUNCIL

OF

## MEDICAL EDUCATION AND REGISTRATION

## WINTER SESSION, 1927

## ELECTIONS

The following were appointed to fill vacancies on the various Committees of the Council: Sir Farquhar Buzzard and Dr Lorrain Smith on the Education Committee, Dr Stopford on the Examination Committee, Dr Lorrain Smith on the Public Health Committee, and Sir Farquhar Buzzard on the Pharmacopoeia Committee.

## COMMITTEE REPORTS

The report of the Pharmacopoeia Committee dealt merely with the number of copies of the *British Pharmacopoeia* which had been sold, and that of the Dental Education and Examination Committee with the action taken in regard to applicants with various foreign qualifications. The Public Health Committee's report contained statistics furnished by the Ministry of Health and the Welsh and Scottish Boards of Health as to the total number of public health appointments available in the United Kingdom.

ENGLAND	Medical Officers	Diagnostic
Whole-time	351	620
Part-time	833	1,039
Totals	1,234	1,659
WALLES		
Whole-time	35	53
Part-time	122	142
Totals	157	200
SCOTLAND		
Whole-time	5	20
Part-time	70	92
Totals	121	332
Whole-time medical officers in Great Britain	431	
Part-time medical officers in Great Britain	1,651	

It was stated that, in addition to the above, many local authorities gave preference to medical men holding the Diploma of Public Health when appointing their specialist officers—maternity and child welfare, school medical work, tuberculosis, venereal disease, etc. All medical officers or health in Scotland were required to be holders of the diploma, whereas in England such officers must either hold the diploma or have had three years' experience as medical officers, or health.

## RESTORATIONS

After private deliberation by the Council the President announced that the following names had been restored to the *Medical Register* after erasure under Section 29 of the Medical Act 1853: William Lloyd (of Brook Street, London, W.), Sydney Edgar Price, and George Joseph Mary Fraser.

## REMOVAL OF NAME AT PRACTITIONER'S REQUEST

Henry Bown, registered M.R.C.S. Eng. L.R.C.P. Lond. 1926 applied for the removal of his name from the *Medical Register* on the ground that he had ceased to practise. The Royal College of Physicians and Surgeons were asked whether they had any valid objection to make, and stated that they had none. The Council acceded to the request.

## DISCIPLINARY CASES

*Adultery during Professional Relationship*

The Council on November 23rd, 24th and 25th considered two cases against practitioners who had recently been respondents in divorce proceedings.

The first was the case of Vernon Raymond Joseph de Boissiere registered as of Wellington Street, Verdun, Montreal, M.P.C.S. Eng. L.R.C.P. Lond. who was summoned on the charge that he had committed adultery with Mrs. Annie Dee during his professional relationship with her. He had been found guilty by the Decree of Divorce Division January 12th, 1927, made absolute July 25th in the case of Dee v. Dee and de Boissiere.

Dr. de Boissiere was not present at the hearing and it was ordered that following on the divorce proceeding he had gone to Canada. He was represented by Mr. G. O. Slade. There was no complaint and the facts of the case were stated by the Council's solicitor Mr. Harper who asked permission to amend the charge by the insertion of the following paragraph:

"And/or that being a registered medical practitioner you absconded with the patient by committing adultery with Annie Dee (a married woman) subsequent to the date of the service of the petition presented

in the said divorce proceedings following and arising out of the friendship which you had formed with her and Annie Dee during the period of such professional relationship.

Mr. Harper explained that in Dr. de Boissiere's affidavit received from Montreal he denied merely that he had committed adultery with Annie Dee on the dates alleged, but he did not deny—or admit—adultery on other occasions. Mrs. Dee however had alleged that adultery did take place but only subsequent to the date of the service of the divorce petition.

The Council gave permission for the amendment of the charge. Mr. Dee called by the Council's solicitor and examined said that she first met Dr. de Boissiere in 1918 on war service when she was a Nurse. Meeting later by accident their old acquaintanceship revived. Adultery never took place until after the divorce proceedings began. She denied strongly the statements made on behalf of Dr. de Boissiere that she had followed him about and threatened suicide if he broke off all relations with her. When, following the divorce proceeding, Dr. de Boissiere went to Canada he reserved a berth for her on the same ship but on reaching Quebec some difficulty arose about her passport and he had to return.

A legal argument arose over certain letters from Dr. de Boissiere to Mr. Dee written subsequently to his settlement in Canada. Mr. Slade on behalf of Dr. de Boissiere strongly protested against these letters being put in at the last moment against his absent client.

The President said that the Council could not take responsibility for Dr. de Boissiere being absent but counsel was entitled to make comments on the fact that these letters had not been included in the affidavit. The Council had before it on the one hand the decree of the divorce court and on the other certain evidence which might be elicited in the course of the inquiry and it would decide on the evidence as a whole at the conclusion of the case. He thought the opening words of the letters might be read but not the substance. The opening words or the letters were accordingly read they contained endearing expressions.

For the defence the first witness was Mrs. de Boissiere who in reply to counsel said that she had journeyed 3,000 miles to defend her husband with whom she was living happily in Montreal where he was commencing practice. She described a visit paid by Mrs. Dee to her house when in England. She alleged that her husband was followed about by Mrs. Dee who had on several occasions threatened—and on one or more occasions even attempted—suicide on his refusal to see her. Mrs. de Boissiere emphatically protested her husband's innocence. He did not defend the divorce suit partly because of his fear that Mrs. Dee might commit suicide and partly because of his desire to escape publicity. Mrs. Dee insisted on following him to Canada. The witness had preceded her husband to Canada in order to make a home and Dr. de Boissiere on finding that Mrs. Dee was intent on accompanying him got her (the witness's) sister to take steps to ensure that she did not land in Canada.

Mrs. Wallace Mrs. de Boissiere's sister gave evidence to the effect that on the instructions of Dr. de Boissiere he went to the Canadian Pacific offices in order that action might be taken against Mrs. Dee who was sailing under another name when the ship touched at Cherbourg but this being impossible action was taken by the immigration authorities at Quebec. The witness maintained in spite of some close questioning by the Legal Assessor that this action was due to her intervention on her brother-in-law's instruction.

After private deliberation the decision of the Council was conveyed to Mr. Slade by the President as follows:

I have to inform you on behalf of your client Mr. de Boissiere that the Council have found that the facts alleged both in the first part and in the second part of the charge set out in the Notice of Inquiry have been proved to their full satisfaction and that they have pronounced judgment on the facts as proved. Their judgment is that Mr. de Boissiere has been found guilty of infamous conduct in a professional respect and they have directed the Registrar to erase from the *Register* the name of Vernon Raymond Joseph de Boissiere.

The other case was that of Bernard Wilfred Goldstone registered as of Menck Road, Cricklewood, M.P.C.S. Eng. L.R.C.P. Lond. who was summoned on the charge that he had absconded with the patient by committing adultery with Mr. Therea Doris Froemberg with whom he stood in professional relationship of which adultery he had been found guilty by the decree of the Divorce Division July 25th, 1927 in the case of Froemberg v. Froemberg and Goldstone in which he was the respondent.

Dr. Goldstone was defended by Mr. Oswald Hempsion. The complainant Mr. Froemberg was represented by Mr. E. L. D. Zeffertt.

Mr. Zeffertt in opening the case said that he understood that Dr. Goldstone strongly denied that he ever stood in professional relationship to Mrs. Froemberg. The case therefore resolved itself into whether professional relationship existed or not. Mr. Froemberg was a young business man married in 1922 and living happily with his wife until 1926. He was away from home on business one week a month. The parties met while on holiday at Le Touquet in August 1926. During that visit the lady had a headache and Dr. Goldstone who had not then been registered, was called for her. Later in London on a social occasion when members of both families were present, Mrs. Froemberg had a fainting fit and Dr. Goldstone attended her. On March 20th, 1927 Mrs. Froemberg had an attack of influenza and Dr. Goldstone was summoned and attended her one of her maids. On subsequent days Dr. Goldstone attended her and was found that April 4th Mrs. Froemberg had a passport for her and they had gone together to Paris.

Mr. Froemberg gave evidence and said that he was a great deal of Dr. Goldstone's capabilities but he himself preferred a practical one of greater experience and at the same time had Dr.

Goldstone was attending his family a Dr. Morton was attending also. Dr. Goldstone's attendance began in November, 1926, he attended at first once every three or four weeks and later more frequently. He never sent in any account, although requested to do so. After his wife had disappeared the witness found several prescriptions in Dr. Goldstone's handwriting. In cross-examination, he admitted that he had never told Dr. Morton of Dr. Goldstone's attendances. He was aware that the treatment of the one doctor might handicap that of the other, but he did not have his own way in that matter. A point was made of the fact that in his affidavit witness had stated only that Dr. Goldstone had attended his wife in February and March, whereas in his evidence he now stated that the professional relationship began earlier, but he replied that the dates, February and March, coincided with the prescriptions which he found after his wife had left, and it was with these facts before him that he made his affidavit.

The evidence of two of Mrs. Froemberg's maids was given as to Dr. Goldstone's visits to the house. One of them said that he came sometimes professionally and sometimes socially, she knew when he came as a doctor because he brought his bag with him.

Dr. Goldstone, in evidence said that his age was 24. He met Mrs. Froemberg and her husband on several occasions socially. He never regarded himself as her medical attendant. He was told, when asked to go round, that the ordinary medical attendant was not available. He knew that she was under the permanent care of Dr. Morton. Under cross-examination, he said that adultery began in December, 1926.

Mrs. Froemberg gave confirmatory evidence. Dr. Goldstone had asked her why she did not send for her ordinary doctor, and she said that when he (Dr. Goldstone) was visiting the house socially she did not see why she should not give her some prescription. In cross-examination her diary was produced, in which, under March 20th and immediately subsequent dates, were such entries as "left rotten this morning, so ring Bernhard up" and "Bernhard came in to see me early this evening, I can go downstairs to-morrow."

Mr. Hempsion, for Dr. Goldstone, said that the Council was not a tribunal of morals. This was solely a question whether a professional offence had been committed. Did Dr. Goldstone abuse his position and make use of the confidence reposed in him as a medical man to steal Mrs. Froemberg from her husband? He claimed that such attendances as had been given were purely of an emergency character. If he, as a lawyer, were asked for his opinion on some social occasion, did the person so asking thereby become his client? There had never been the ordinary relationship of doctor and patient in this case. He adduced other cases, very similar in character in which there had been emergency attendances when the Council had found for the doctor.

Mr. Zeffert said that he made nothing of the "attendance at Le Touquet, but he submitted to the Council that some short time after that attendance Dr. Goldstone formed the design not only to commit adultery with Mrs. Froemberg, but to carry her away from her husband and the only way in which he, a young unestablished practitioner, could accomplish his plan she being in a well-to-do home, was to gain entry as a medical man. Mrs. Froemberg's diaries showed that the relationship of doctor and patient, at any rate in his view, existed.

After a long private deliberation the Council's decision was announced as follows:

Mr. Goldstone. I have to announce that the Council have found the fact alleged against you to have been proved to their satisfaction. They have found you to have been guilty of infamous conduct in a professional respect and have directed the Registrar to erase your name from the Medical Register.

#### Convictions

The case next considered was that of Victor Thomas William Eagles, M.C., registered as of Linwood Road, Bournemouth, L.R.C.P.Ed., L.R.C.S.D., L.R.F.P.S.Glasg. who appeared on the charge that in August last he was convicted at the Witham Petty Sessions of being drunk in charge of a motor car and fined £30, ordered to pay £3 10s costs, and disqualified from holding a driving licence for two years.

Mr. Hump in laying the facts before the Council said that it was not usual to bring a practitioner up on a single conviction of this kind, but this appeared rather a scandalous case. It was reported in the press under the headings, "Doctor drunk in charge of a car—young girl's remarkable story." Dr. Eagles first pleaded guilty to the charge, but on learning that the girl with whom he was driving at the time was to be called as a police witness he amended the plea to "Not guilty." The girl's evidence was that on August 4th the defendant came along in his car, smiled at her and invited her to have a lift. During the journey six public houses were visited. On returning after the last visit Dr. Eagles drove the car at an angle which caused it to turn over. The bench found that the doctor was drunk and quite unfit to drive a car, and only their consideration for his professional position prevented them from sending him to prison.

Dr. Eagles declined that he was a victim of police methods. He had never pleaded guilty to the charge and never would but in the way he sustained an injury to his leg and this accounted for the way in which he was standing over the car immediately after the accident which led to the inference on the part of one of the witnesses that he was drunk. The summons was taken out four days after the accident. Had the charge been made at the time he would have gone straight to the police station and submitted himself to examination. He also complained that the chairman of the bench or magistrates was a doctor who, he thought should have withdrawn in a case in which another man at the same profession was concerned for it left him out it would be said that he was showing favouritism. He agreed that he called at certain public houses on the journey and had some

drink, but he was not drunk. He knew exactly how much he could take. The girl to whom he gave a lift was in hysterical subject who continued to shriek after the car had turned over, and this brought out a crowd, who concluding that it was drunk, became menacing.

Dr. Brackenbury asked whether there was any medical evidence as to respondent's condition at the time.

Dr. Eagles said that no examination was made and no medical evidence was tendered. The evidence of the police constable was corroborated only by that of the hysterical girl and by the aggressive of the village crowd who had collected. He drove his car back home that same evening.

The decision of the Council was as follows:

Mr. Eagles. I have to inform you that the Council have found the conviction alleged against you in the Notice of Inquiry to be proved. Such a conviction against a medical man is dishonourable to him and to his profession. The Council however is inclined to believe that you will regard this appearance as a warning, aim at the course of conduct which has led to this conviction. Accordingly they have not seen fit to direct the Registrar to erase your name from the Medical Register.

The next case was that of John Joseph McBride, registered as of Brunswick Street, Chorlton on Medlock, Manchester, M.B., B.Ch., N.U.Irol. who was summoned on the charge that he had been convicted on four occasions in 1925 and 1926 of being drunk or drunk and disorderly.

Dr. McBride gave an explanation of the occurrences, admitting the convictions but stating that he had now been a total abstainer for some months, and he produced testimonials from several medical men.

The Council found the convictions proved, but postponed judgment until the November session of next year, when the respondent would be required to appear and produce professional testimonials as to his habits and conduct in the interval.

A similar case was taken with John McGhee registered as of Station Road, Gillingham, Kent, M.B., Ch.B., B.Glasg., who had been convicted in 1926 of driving a motor car to the danger of the public and of failing to stop after an accident, and in 1927 of being drunk whilst in charge of a motor car and of driving a car to the danger of the public.

Dr. McGhee admitted the two convictions, but denied that he was drunk on either occasion, or incapable of driving a car. He had now become a total abstainer and the Insurance Committee, with whom he was under contract, had accepted his assurances.

The Council found the convictions proved, but postponed judgment until the November session of next year.

The last case of this kind was that of Robert Moore registered as of Mawney Road, Romford, M.B., B.Ch., M.D. U.Dubl. who had been convicted in 1917 of being drunk and riotous and in 1927 of being drunk whilst in charge of a motor car.

Dr. Moore denied that he was drunk on either occasion, and he complained of one of the tests which he was required by the police surgeon to undergo on the second occasion. He gave assurances to the Council, however, as to his future conduct and stated in writing that "the human weakness of occasional inebriety will never occur again."

The Council again found the convictions proved but postponed judgement until May, 1928, on the usual conditions.

(To be continued)

## POST GRADUATE COURSES AND LECTURES

FELLOWSHIP OF MEDICINE AND POST GRADUATE MEDICAL ASSOCIATION—Lecture at Medical Society, 11 Chandos Street, W.1. Mon. 5 p.m. Practical Hints in Medicine. Hospital for Diseases of the Skin, Blackfriars Road, S.E. Special Course afternoons only, fee 11s (for two weeks). Infants Hospital, Vincent Square, S.W.1. Afternoon Course, fee 23s (two weeks course). West End Hospital for Nervous Diseases, 75 Welbeck Street, W.1. Postgraduate Course in Neurology every afternoon at 4 p.m. until December 17th. All information, syllabus and tickets from the Secretary, Fellowship of Medicine, 1 Wimpole Street, W.1.

CLINICAL LONDON THROAT NOSE AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Fri. 4 p.m. Foreign Bodies in the Food and Air Passages.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs. 4 p.m., Complications of Pneumonia.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Tues. and Thurs. 5 p.m. Eczema.

NORTH WEST LONDON POST GRADUATE COLLEGE, Prince of Wales General Hospital, Tottenham, N.15.—Mon. 2.30 to 5 p.m. Medical Surgical and Gynaecological Clinics. Operations. Tues. 2.0 to 5 p.m. Medical Surgical, Throat, Nose and Ear Clinics. Operations. Wed. 2.30 to 5 p.m. Medical Skin and Eye Clinics. Operations. Thurs. 11.30 a.m. Dental Clinics. 2 p.m. Special Demonstration of Surgical Cases. 2.30 to 5 p.m. Medical Surgical and Ear, Nose and Throat Clinics. Operations. Fri. 10.30 a.m. Throat, Nose and Ear Clinics. 2.0 to 5 p.m. Surgical Medical and Children's Diseases Clinics. Operations.

ROYAL SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11 Chandos Street, W.1.—Wed. 4 p.m. The Health of the Schoolboy.

ROYAL NORTH WEST LONDON HOSPITAL, Holloway Road, N.7.—Tues. 3.15 p.m. Disorders of Nutrition and their Clinical Significance.

SOUTH WEST LONDON HOSPITAL, Lambeth, S.W.12.—Thurs. 4 p.m. Clinical Demos. in relation to the

WEST LONDON HOSPITAL POST GRADUATE COLLEGE, Hammermith, N.6.—Mon. 10 a.m. to 1 p.m. Genito-urinary Operations. Skin Department. Surgical Wards. 2 p.m. Surgical Wards. Gynaecological and Eye Departments. Tues. 10 a.m. to 1 p.m. Medical Ward Visit. Demonstrations in General Diseases. 2 p.m. Medical Wards. Throat, Nose, and Ear Department. 4.30 p.m. Special Lectures. Diabetes Mellitus. Wed. 10 a.m. to 1 p.m. Medical Wards. Demonstrations in Surgical Wards. Eye Department. 4.0 p.m. Thurs. 10 a.m. to 1 p.m. Neurological of Fractures. 2 p.m. Eye and Gynaecological Ward. Fri. 10 a.m. to 1 p.m. 2 p.m. Throat, Nose, and Ear Department. Sat. 10 a.m. to 1 p.m. Bacterial Therapy. Medical Department. Daily Operations. Medical. 2 p.m. at 2 p.m.

GLASGOW POST GRADUATE MEDICAL ASSOCIATION—At Victoria Infirmary, W.2, 4.15 p.m. Skin Cases.

JAMES WICKES INSTITUTE FOR CLINICAL RESEARCH, St. Andrews—Tues. 4 p.m. Some Recent Views upon Carcinoma as applied to the Colon.

MANCHESTER ROYAL INFIRMARY—Thurs. 4.15 p.m. Pulmonary Hernia. Fri. 4.15 p.m. Gastric Analysis in Clinical Medicine and Research. Tea at 3.45 p.m.

SHEFFIELD UNIVERSITY POST GRADUATE CLINICS—At Royal Hospital, Fri. 3.30 p.m. Brachial Neuritis.

## PRIVATE PRACTICE AND THE PUBLIC MEDICAL SERVICES

BY

CHARLES E. S. FLEMING M.R.C.S., L.R.C.P.,  
B. Med. Off. Army

According to the report of the last meeting of the Council a committee has been appointed to consider resolutions passed at the Annual Representative Meeting the object of which was to safeguard private practice from the inroads of the public health services. The personnel of the committee is such that it must command the respect of the whole profession but I wish that the reference had been worded differently, so as to make it appear that the object of the Council was not "How can we prevent the public medical services encroaching on private practice?" but "How can the private practitioner best take part in the work of the public medical services?"

The Medical Secretary in one of his circular letters stated that

"We have an opportunity of convincing the public that all our talk about preventive medicine and desire for the welfare of the public is not mere common form but that we are really anxious to do our bit in educating the community in individual and collective hygiene. A man need not be a very acute observer of public affairs to see that the public expects more and more in this direction and if we do not give it other persons or bodies will and I venture to say they will not do it as well as we could do it."

A statement with which no doubt all will agree

"We all now realize the advance in and the necessity for the practice of preventive medicine. We also realize the dangers and disadvantages contingent to this service as conducted by the State but obvious as they are it is not easy to avert them. We realize that a new order is coming that it is as impossible to fight against the spread of preventive medicine as it was a century ago to stop the medical revolution of which every old the displacement of many artisans and craftsmen. But even so there is still a demand for artisans and craftsmen so there must still be general practitioners, and so far as one can see for a long while to come the greater part of the ordinary daily practice of medicine will be curative

Some seem to think that preventive medicine is going to displace curative that can never be but it will surely in time come to take an equal place in the outlook of most general practitioners. The general practitioner cannot hope always to continue to be entirely individualistic in his practice any more than the hospital surgeon who finds it necessary to work as one or a team. Remarks made by some of the speakers at the Annual Representative Meeting when this subject was under discussion reminded me of King Canute's courtiers who would have been more useful to the monarch if they had advised him to get into a boat and make the tide take him where he wanted. We cannot possibly stop the progress of preventive medicine but we can by sympathetic co-operation do much to direct its course and make it a part of our daily work.

There can really be no question of the repression of the general practitioner. We all desire the maintenance of the independence of the medical practitioner because we know what it means and we naturally dread the prospect of the loss of this independence which would result from his absorption into whole-time State service. Yet at the same time we realize that his co-operation in the work of preventive medicine would add enormously to its efficiency and if the committee recently appointed can suggest means by which he can so assist they will be doing an invaluable service to medicine and the State. The remedy is not to displace the general practitioner, but to find him the opportunity to give of his best for preventive medicine, yet at the same time to save all his old work.

The origin and growth of bureaucracy are probably due to the desire of the State to have authority and responsibility for the conduct of the affairs of the State to get things done efficiently promptly and completely. No Government would wish to undertake the work of any department if it was assured that it could otherwise be satisfactorily carried out, and if public health could be maintained by voluntary agencies it is no likely that the Ministry of Health would want to interfere but we know—experience has shown—that much of the work necessary for the proper conduct of preventive medicine could not be done without the control and authority and organization that can only be provided by the State.

Further reason for the interference of the State is partly economic partly the non-appreciation by the patient of his need, and partly the difficulty of the general

practitioner in finding and following up and, when found, in providing and enforcing proper treatment. This does not involve the efficiency of the medical man, who has not retrogressed in skill or knowledge in the laws of health and the science and art of medicine—quite the reverse, but the lay public has progressed in scientific knowledge and demands better treatment and better means for the maintenance of its health.

The region where there is most fear of interference with private practice is the communal clinic. In objecting to this work being undertaken by officials, we must remember that much of it is new work that we have never done before, so that we cannot say it is work that has been taken from us. We must also remember that the specialist clinics, tuberculous, venereal, orthopaedic, eye, throat and ear, have created a demand for a number of specialists, who, though part-time officials, certainly should be and frequently are private practitioners, and may be general practitioners, and all these clinics, to which the family doctor should have free access, bring to him the greatest advantage of in crisis available consultant service, of value both to himself and his patient.

But the general practitioner should be closely associated with the work of these clinics, in following up the treatment when possible in the home of the patient—and he might, under altered conditions, undertake the greater part, if not all, of the work of the other clinics—maternity, infant, school.

The clinic owes its success to opportunities it has that the general practitioner has not. Patients are searched for, then attendance is urged if not actually compulsory, and treatment is followed up, the clinic is advertised and the results of the work done there are collated and published, and the public has now become obsessed with the fetish of the clinic, endowing it with powers that are not cutely peculiar to it.

The drawbacks of the clinic include the method of staffing. (a) The medical officer in charge has not that direct personal knowledge of the patient's previous history, the patient's family, his home and surroundings, and his economic position and the conduct of the treatment prescribed, that he could have if he were the family doctor. (b) The whole-time medical officer requires a very large experience of a small number of diseased conditions. He has not the opportunity to attain a wide experience of general medicine, and when he has gathered much useful experience in this narrow field, if he is promoted, his work is probably changed and the value of his previous work is lost. The staffing of clinics by whole-time men is really a loss of good agents, and the absorption of men who would otherwise be useful general practitioners or part-time specialists.

The family doctor is under serious disadvantages. He only comes into contact with his patients when they have become diseased, and then only when asked to, and he has no means by which he can get at them during health or during the earlier stage of their illness, before they would in the ordinary course have sought medical advice. Also owing to the present conditions he suffers from a lack of method in applying his knowledge.

Attempts have been made to put some of this work into the hands of the private practitioner, but they have generally failed, partly and chiefly because he has found it impossible to adapt his practice to the methods and routine of the public official, and the attempt has sometimes given rise to interprofessional jealousy, also there has been a disinclination on the part of the practitioner to undertake this work under the conditions required.

Although we have perhaps failed to realize that the function of the medical practitioner is not only to treat disease, but to prevent it—to maintain health, although in the past he has to some extent failed to do this because he has not tried, although both his training and his practice have been it might be said that his failure has been as complete as many are apt to assume. He may fairly claim that much of the improvement in the health of the people—the lengthening of life, the decrease in infant mortality, the disappearance of whole or in part of many diseases—is due as much to his work as it is to the work of the medical officer or health.

The private practitioner and the medical officer of the clinic are members of the same profession with the same training but with ever-widening divergence in the character of their experience, and, given the opportunity, the private general practitioner should do, and do better, but for want of opportunity has not done, what is now being done in the clinic.

He has in his practice, and through his experience, great advantages. He has knowledge of the history of a large number of diseases under all sorts of conditions, and of their relation to one another. He becomes an expert diagnostician of the early stages of disease, the most difficult to recognize. He has a vast store-house of facts, not in end indexes, but in his brain, and as years go on he must have accumulated experience of the personal history of disease, its effect and its treatment, of the value of treatment under different conditions, which might be at the service of the public to a greater extent than it is at present. In following up a patient himself into his home and there examining the other members of his family, and noting his surroundings and the possibility of carrying out effective treatment, and its results, the proper agent should be the family doctor.

He can, and does, educate the public in the most valuable of clinics, the home. His value as a health missionary is too obvious to need emphasizing. The work of preventive medicine is done in the home or the consulting room should be far more valuable than that done at any clinic or lecture. His work is to listen on and to encourage, not to hinder preventive medicine, and his qualifications and opportunities for doing that are already great, but could and should be made much greater.

The work of the general practitioner should consist not only in treating existing disease, but in preventing by his advice and influence the recurrence of that disease or the damaging of the patient's constitution which may lead to other disease, or his falling a victim to those organisms which applied medical science has not been able to keep away or get under complete control.

There must be means by which his practice, with its wonted freedom of thought and method, can be combined with that required by the public health authorities, so that an intimate and hearty co-operation between both departments of medicine should together provide a complete and efficient service. Surely, too, there must be some means by which all this supply of valuable information, all these advantages of private practice, could be used in the interests of the community more effectively than they are at present.

A medical officer of health, in a letter about domiciliary work undertaken by his staff, says: "It is our duty to seek out and keep records of defective children and others, and to insist on treatment in its widest sense, in spite of parental neglect, obstinacy, or poverty. No such responsibility, as things are, can rest on the practitioner unless called in by the parent." This, of course, is a state of affairs that the extension of the national health insurance to wives and dependents could remedy.

A really efficient scheme would enable most of this work to be done by the general practitioner. Every home, every consulting room, would become in effect a clinic. It would give the medical man the opportunity of seeing everyone that required his services, whether for prevention or cure of disease, without any question of expense arising, so that cases seen by the school inspector, for instance, could be, and probably would be, referred to him. This would mean that all the work done at clinics that came within the competence of the general practitioner would have to be undertaken by him. Whether under these conditions the clinics would be looked upon by some medical men with the same jealous eye as they are at present is a moot point.

It would enable the practice of medicine to be rather and more effective in cure, more energetic in the reduction of morbid sequelae, and every day saved in illness, every recurrence saved, would be for our own benefit as well as for that of the community. It would, of course, be essential that the co-operation of the general practitioner should be something more than perfunctory. It would, I doubt until the keeping of certain records, and this is a

matter that would require very careful consideration by all concerned.

The first condition to come within the orbit of the clinic is the internal. This is work that certainly should be kept in the hands of the family doctor and while the extension of the national health insurance would make this easier, something more would be necessary, and no doubt practicable, to make this possible.

It is most important that we do not wait for work that we cannot or are not willing and competent to undertake. We did so, for instance, in the case of tonsils and adenoids and venereal disease and the results were not satisfactory.

With an increasing knowledge of the causes of disease the scope of preventive medicine is naturally ever widening, and many illnesses are now considered preventable that were not so considered thirty years ago, but this prevention is often complex in its requirements. For instance, anaemia, and all that it means and entails, its prevention, which has made enormous strides involved better housing and with it more fresh air—more sunshine, it required more exercise, more rest, less undue fatigue, better clothing, better food, better teeth, absence of diseased tonsils, and freedom from constipation. Nothing could show better the need for the co-operation of the medical officer of health, the specialist, the statistician and, most of all, the general medical practitioner.

This extension of insurance work would mean that every general practitioner would become in fact a medical officer of health. It would be both his duty and his interest to maintain health and to cure disease at the earliest possible moment.

This is a conception of private practice as an intimate and central part of a great national medical service. A change in our practice such as suggested would naturally require the utmost caution in its adoption, there would be difficulties to be overcome and dangers to be avoided but black opposition to the progress of public health medical services will be worse than useless and some means must be found by which the general practitioner who is no doubt the best suited for the work, can take an active part in it.

## RHEUMATISM IN CHILDHOOD

### A YEAR'S WORK OF A SUPERVISORY CENTRE

The following report on the first year's work at the Rheumatism Supervisory Centre, Paddington Green Children's Hospital, has been presented to the Science Committee of the British Medical Association by Dr. Reginald Miller, physician in charge, and Dr. Maud Sauderson, medical assistant.

The Centre was opened on October 9th 1926 and the following report deals with the period from October 9th 1926, to October 1st, 1927. During this time the Centre has been available every Saturday afternoon except on four occasions when the hospital was closed to out-patients. Since March 1st, 1927, acute rheumatism in children under 16 years of age has been a notifiable disease in Paddington. Up to the end of the period under review notifications of 24 cases resident in Paddington were received. As legally only cases in acute stages can be notified, it is clear that some years must elapse before the whole rheumatic juvenile population will be embraced in the scheme. The fact that the Kensington Borough Council has now followed suit (as from October 1st 1927) will probably be an aid to the work in Paddington. The homes of all cases notified are visited from the Centre but in this report only such children as have actually been examined at the Centre have been included.

### I MATERIAL INVESTIGATED

The number of children admitted to the Centre during its first year was 175. Of these, 6 were judged to be definitely non-rheumatic and are excluded from the remainder of this report.

Reports to the Science Committee on Rheumatic Heart Disease in Children published in the SUPPLEMENT of July 3rd 1928 and April 1st 1927.

### Admission of Cases

As far as the public health services are concerned, the Centre works directly only with those of the borough of Paddington, but children resident in any district are admissible, provided that they are already patients of the hospital. Tables I and II show respectively the areas from which the cases have been drawn, and through what agencies the Paddington cases have been sent to the Centre.

TABLE I—Sources of Cases

Paddington	71
St. Marylebone	11
Kenington	27
Willesden	25
Other areas	32

Following the opening of a similar centre at the Prince of Wales Hospital, additional cases from Kensington have been admitted to a temporary special department for Kenington of the Paddington Green Centre during the period May 13th to October 1st 1927.

TABLE II—Sources of Paddington Cases

Through the hospital	47
Through the school medical service	15
Through notification	7
Through practitioner as advised by medical officer of health	2
	71

### II CLASSIFICATION OF CASES

Table III shows the classification of all cases (169) based upon the condition present at their first examination at the Centre.

TABLE III—Classification of Rheumatic Condition at First Attendance

	Paddington Cases	All Cases
Potential and mild rheumatism	19	51
Active rheumatic infection	7	13
Quiescent rheumatic infection	45	106
	71	169

The large proportion of cases falling in the "potential and mild" group is ample evidence that the Centre is no mere "cardiac clinic." The observation, supervision, and treatment of children in the earliest stages of rheumatic infection with a view to studying the first appearance of serious disease and the prevention of heart disease are regarded as the most important functions of the Centre. The group labelled "potential and mild" includes three main types in which a positive diagnosis of rheumatic infection is not always possible at a first examination.

- Those with tonal and muscular pains only.
- Those with nervousness and fidgetiness, not amounting to definite chorea with or without sore throat and pains (potential choreic type).
- Those with hearts conforming to the types of suspected rheumatic heart disease (see below) but without other evidence of rheumatic infection.

Erythema nodosum (which will undoubtedly figure in notifications) is not regarded as rheumatic, and is excluded from this report.

### Condition of Heart

Table IV shows the classification of all cases (169) according to the condition of the heart as judged at the first examination.

TABLE IV—Showing Condition of Heart in All Cases at their First Attendance

	Paddington Cases	All Cases
Congenital abnormality	2	2
Rheumatic heart disease—		
Absent	37	99
Suspected	6	18
Present { acute	1	2
{ sclerotic	20	9
{ quiescent	22	39
	71	163

The cases classified as "suspected" heart disease include the following types:

- Those showing a systolic apical murmur in which we were not entirely satisfied that it was one of the common functional type occurring in a normal heart.
- Those showing as their only abnormality the presence of a third apical sound not amounting to a mid-diastolic bruit.
- Those showing nothing abnormal except persistent tachycardia.

Of the 18 cases at first classified as "suspected" heart disease, 10 have been re-examined after a varying number of months during the year under review, of these, 7 have remained unaltered, 2 have become normal, and 1 has developed mitral stenosis.

### III TREATMENT

#### *Co-operation with the Public Health Services*

The School Medical Service has been informed of every case. For the Paddington cases special cards, provided by the school medical authorities, have been used.

Housing conditions have been investigated in every case. In the Paddington cases all homes have been visited and the parents' statements verified, in the cases outside Paddington the statements have been noted. It is interesting to find that the particulars given by the parents on the subject of damp in their homes were found in the great majority of cases to be accurate on closer investigation by visiting. Several cases in the Paddington group were found to come from houses in an exceptionally bad state of repair, and through the action of the medical officer of health improvement in them has been effected. In a few instances families have been moved or offered alternative accommodation.

#### *Personal Treatment*

Table V shows the various forms of treatment which have been adopted in different cases. Full use has been made of the facilities for in-patient and out-patient treatment at the hospital.

TABLE V—Treatment

	Paddington Cases	All Cases
Treatment for active infection		
In hospital as in-patient	6	13
In hospital as out-patient	10	23
Referred to private doctor	3	3
Tonsillectomy		
As in-patient	6	8
As out-patient	16	25
Referred elsewhere	1	8
Recommended to heart home	0	2
Recommended to P.D. school	1	6*
Kept under supervision	29	78
Discharged	9	17
Lost sight of	2	5

\* Not including cases already attending special school before admitted to the Centre.

The patients discharged after their first attendance, numbering 17, were either too old for the Centre or lived at too great a distance. 5 patients failed to attend again after their first examination, although "remainder" cards were sent to their parents. It is perhaps gratifying that the number of such cases is so low.

### IV RESEARCH

1 *Relationship of Juvenile Rheumatism to Poverty, Overcrowding, and Dental Caries*—A series of 150 cases has been analysed on these points. The results confirm those of the first report of the British Medical Association Committee on Rheumatic Heart Disease in Children and those of other investigators.

(a) Juvenile rheumatism although markedly a disease of hospital as opposed to private consulting practice, does not vary directly in incidence with the degree of poverty. It is commoner in the upper than in the lower strata of the working class population.

(b) Overcrowding does not appear directly to predispose towards juvenile rheumatism.

(c) Dental caries although it is said to show the same peculiar class incidence as juvenile rheumatism does not seem to have any definite effect in predisposing towards the infection. Rheumatic children, taken as a class, have on the whole good teeth.

In these particulars similar results have now been obtained by so many investigators that it is unlikely that further study will upset these conclusions.

2 *Study of Earliest Stages of Rheumatic Infection*—We have now under observation 51 cases of rheumatism in

its very early stages. It is expected that by watching them over a period of years we shall be able (a) to reach more accurate conclusions on the earliest and doubtful phenomena of the disease, and (b) to study the factors responsible for the onset of the severer aspects of the infection.

3 *Study of Earliest Stages of Rheumatic Heart Disease*—Similarly we have a series of 18 rheumatic children in whom the heart shows slight departures from the normal as detailed above. It is hoped that further study of such cases over a long time will help to make clear the value of such cardiac signs as at present of doubtful significance.

4 *Relationship of Tonsillitis to Juvenile Rheumatism*—The present series of cases fully confirms this well known association. Out of 169 cases, 98 had undergone the operation of tonsillectomy, of the remainder, 19 were regarded as having normal tonsils.

5 *Value of Tonsillectomy in Rheumatic Children*—We have now under observation a number of rheumatic children whose tonsils have been completely removed, as well as a series showing tonsillar remnants after incomplete operation. We have already had some instances of rheumatism arising in tonsillectomized children, but these are too few as yet to be of much value. A point which we are investigating in this connection concerns the housing and other environmental influences in this series of cases.

6 *Relapsing Cases*—We are studying carefully such cases as show relapses and recurrences, but neither their number nor the time yet elapsed has been sufficient to enable us to reach any conclusions on this difficult type of case. It seems probable that in the earlier cases the child's environment may be so heavily against it as to predispose towards relapses, while in the later and more severe types the disease has such a hold on the patient that resistance is worn out. As yet we put forward this view as a mere speculation.

#### *7 Relationship of Damp Homes to Juvenile Rheumatism*

—In the present series damp has been found in 57.5 per cent of the homes of the Paddington rheumatic children, a proportion practically the same as that found in the cases investigated for the British Medical Association Report I. A small series of non-rheumatic families has been investigated by us on similar lines, and it has been found that the proportion of damp homes here sinks to 30 per cent. The value of such "control families" in checking results is probably not great, owing to the presence in them of a large number of children with diseased tonsils, an unknown proportion of which will probably develop rheumatism at some time. At present we are inclined to think that the best method of estimating and checking the influence of damp dwellings on the production of juvenile rheumatism is by a study of the geographical distribution of the disease in cities and districts.

8 *Rheumatic Map of Paddington*—In the period under review we were able to study the distribution of 71 cases of juvenile rheumatism in the borough of Paddington. This district contains rich and poor areas of every variety, and is traversed by a canal and submerged river. The number of cases is as yet insufficient for any assured conclusions, but it is interesting to us to find that there is one area of the borough which bears a disproportionately heavy incidence of the disease. As this corresponds to the district which we have for many years suspected is the richest in rheumatism, we think it is more than likely that further research will confirm our preliminary results. This area alluded to is far from being the poorest or the most overcrowded in the borough, and lies at some distance from the hospital. It lies, however, between the canal and a submerged river.

We beg gratefully to acknowledge the receipt of a report from the British Medical Association in aid of the research work undertaken in connexion with the Rheumatic Supervisory Centre at the Paddington Green Children's Hospital. Our thanks are also due to the Paddington Branch of the Invalid Children's Aid Association for the invaluable help that they have given us.

# GENERAL COUNCIL OF MEDICAL EDUCATION AND REGISTRATION

WINTER SESSION, 1927

(Continued from page 215)

## REVISION OF THE MEDICAL CURRICULUM

SIR HENRY ROLESTON brought forward a final report of the Education Committee on the progress made throughout the country towards the readjustment of the medical curriculum in accordance with the resolutions of the Council adopted in May, 1922 which came into force on January 1st 1923. He said that although he himself was now in the chair of the committee, the brunt of this work had fallen upon his predecessor, Professor Mackay. The report showed that the resolutions of the Council had been generally adopted. It might be said that all the bodies accepting the University of St. Andrew's had modified their curricula as a result of the suggestions of the Council.

With regard to the pre-registration examination which was made with the object of lightening the preliminary part of the course the report stated that there could be no doubt that the Council intended that the medical apprentices of physics, chemistry, biology, anatomy and physiology should be studied throughout the distinctive practical part of the course, and that the student should know the applications should be tested in the final examination. In most cases teaching for it was provided in the medical school, either in special classes or in the ordinary classes of the faculties of science. The Council did not mean that the requirements of the examination should be satisfied by a pass in theoretical physics and chemistry of the preliminary or matriculation examination in general education. It was deemed a better plan in addition to an approved examination in general education such as the student passed at the close of his school career and before entering the university. One of the bodies apparently accepted a pass in the matriculation examination in physics and chemistry in place of the pre-registration examination. The Council also intended that the teaching work to be used by the theoretical and practical examination before registration should not be any part of the five years' medical course. Many bodies which gave pre-registration on courses of study had the same time lengthened their courses as a whole to five and a half or six years' study—this seemed to be the case in the Universities of London, Manchester, Oxford, Bristol and Wales. It would also seem (and the committee in its minority of the report) as though there were in the minds of the teachers in the medical schools a distrust of the physical science which was fitting in the secondary school and the great majority of the bodies had provided pre-registration teaching carried on within the medical school itself. It might be argued that if the old first professional examination in chemistry, physics and biology was still to occupy its position in the earlier part of the curriculum there was much to be said for making the instruction on which it was based a continuation of a pre-registration course provided at the same time that the professional course was not allowed to suffer in length.

As to the length of the course the Council recommended that the period of certified study should be not less than five academic years in the first three years of which chemical subjects should be studied. The great majority of the bodies had accepted and adopted the recommendation that three years should be devoted to chemical work after the completion of the examinations in anatomy and physiology at the close of the second year.

The additional subjects suggested for inclusion in the curriculum were about sixty in all. By the great majority of the bodies most of these had been expressly included. Many bodies had not definitely mentioned that out-patient work should be included at hospital was required, this was particularly noted in connexion with the Irish schools which as a whole did not seem to do full justice in their rules and regulations to actual hospital work though it was very

probable that in all the Irish schools out-patient attendance was either compulsory or general. Among the various subjects specially recommended for study by the Council, tuberculosis, venereal diseases, and ante-natal conditions appeared to the Education Committee of great importance in modern circumstances, the opportunities afforded to the student for their study had been inadequate. Sir George Newman had prepared a personal report on the whole subject, which had been circulated to the licensing bodies, and another report on the administration of anaesthetics by the late Professor Littlejohn had also been circulated.

Professor ASHLEY MCKINTOSH took exception on behalf of the University of Aberdeen to a statement in the report that except as regards the duration of the curriculum after the passing of the pre-registration examination, the regulations (in Aberdeen) were in general accordance with the resolutions of the Council. He pointed out that it was said of Edinburgh that by combining the pre-registration and the first professional examination the University seemed to have solved the apparently somewhat difficult problem of completing the second examination professional work in anatomy and physiology in the first two years of the curriculum. That was exactly what Aberdeen had done and yet Aberdeen was mentioned as if it was a time-grosser.

Professor LORRYN SMITH pointed out that in Aberdeen a candidate who commenced his course in the summer term and had been regularly successful in his examinations, would complete the fifth term at the close of a spring term and might graduate then. He would be unable to do that in Edinburgh where there was no graduation at the end of the spring term so that there the student beginning in the summer term had five years and three months.

Dr BRACKENBURY received an assurance from the President that the report would be available for general discussion later.

It was then noted that the report be received and entered on the minutes that the attention of all the licensing corporations be drawn to the conclusions of the committee on its regulation and that they be asked to forward their observations to the Council as soon as possible.

## CONDITIONS OF PROFESSIONAL EXAMINATIONS

SIR NORMAN WALKER, Chairman of the Examination Committee presented a report of that committee containing the conditions laid down by the various licensing bodies for the final examination and for the examinations in anatomy and physiology also the Council's recommendations adopted in 1922 to govern professional examinations. He said that the examinations in anatomy and physiology were combined in eighteen out of twenty-three licensing bodies, the other five might actually consider following the same course. With regard to the re-examination of certain examinations of the licensing bodies he found that in 1887 it was agreed on the motion of Mr. John Marshall that the principle on which the Council's visitations and inspections of examinations ought to be founded is that they should systematically cover within stated periods of time the professional examinations in all branches of knowledge which the Council deems essential to qualifications for licence. He thought however, that the other examinations had not been visited until the Examination Committee recently suggested that procedure to the Council. The visitors had been received not only with courtesy but with cordiality by all the bodies which had many times expressed their gratification that members of the Council should see the work in progress. In the United States the Association of American Colleges systematically visited and inspected examinations and class study and nine out of ten of the bodies concerned stated that such visitations did nothing but good. Sir Norman went on to say that it had proved extremely difficult to formulate the recommendations of the Council in such plain English as to give rise to no misunderstanding. One of the rules, for example was

Two examiners should always participate in the oral examination of a candidate except in subordinate parts or practical examinations.

The word "participate" appeared not altogether well chosen. The Council did not mean that such an examination might take place with a student and one examiner in one corner of the room, and another student and a second examiner in another corner, and yet in some quarters that was held to be "participating." He wished somebody would suggest a word other than "participate," which meant that the one candidate and the two examiners should be present at the same time. Another rule read

"Whatever may be the system of marking, the percentage of a pass in each subject should be not less than 50."

It was not enough if the total marks gave an average of over 50 for each subject, in no subject must they be below 50. He also drew attention to other rules, especially the one requiring as an essential to a pass 50 per cent of the marks assigned to the clinical examination, also that all candidates should be required to complete the three portions of the final examination within a period of nineteen months.

Professor R. J. JOHNSTONE said that a man who came up for the final examination might be so exceptionally ill prepared for it as to make it evident to the examiners that even in three months' time he would not be able to get up the subject sufficiently. The speaker thought it would be well if the Council definitely recommended that in such cases the examiners should have the discretion to refer the candidate back for six months.

Mr. NORMAN WALKER noted the suggestion, but thought that in this matter the tender-heartedness of the examiners came in.

Professor ARTHUR THOMSON expressed the fear that the regulations were being made too inflexible. Education was in some danger of being converted into a cruet-system, with every institution governed and controlled by the same set of regulations, which would apply as well to the minimum qualifications as to the higher. In the best interests of medical education a certain degree of licence ought to be allowed to the responsible bodies, he had sufficient faith in all of them to be sure that they would do their best to work to a common end.

The PRESIDENT pointed out that the aim of the Council had been to require each licensing body with what the others were doing.

The report was approved.

#### REGULATIONS FOR REGISTRATION OF STUDENTS

Mr. HUMPHRY ROLLESTON, Chairman of the Education Committee, brought forward a report on the revision of the regulations for the registration of students. These revisions have been before the Council on previous occasions. Recommendation IV has now been amended by the insertion of the words "theoretical and practical," so that it reads as follows:

"Before registration as a medical student every applicant should be required to have passed a recognized examination in general education and, in addition thereto, an examination (theoretical and practical) in elementary physics and elementary chemistry conducted or recognized by one of the licensing bodies."

This amendment has been made in order to draw attention to the fact that the ordinary matriculation standard is not regarded as sufficient for pre-registration purposes unless it includes a practical test. It has also been made more clear that, in order to fulfil the Council's requirements, the theoretical and practical examinations in these subjects must be in addition to the examination in the subjects of general education. A matriculation examination admitting to the faculties of arts and pure science is *ipso facto* recognized, but in other faculties the certificate must bear evidence of passes on the matriculation standard in four specified subjects.

The report was approved.

#### DISCIPLINARY INQUIRIES

##### Miscellaneous

At the outset of its disciplinary proceedings the Council dealt with a number of cases in which judgment had been postponed from previous sessions.

The first was that of Percy Bateman, registered as of New Cross Road, London, against whom certain convictions for drunkenness

had been proved (SUPPLEMENT, December 4th, 1926, p. 233). Dr. Bateman did not attend at the resumed hearing, and he was represented by Mrs. Bateman, who stated that her husband was too unwell to appear.

The Council's Solicitor, Mr. Harper, reported that Dr. Bateman had sent in three testimonials, one by Dr. J. P. Conway, another by Mr. W. Macmillan, L.D.S., and a third by Mrs. L. I. Clarke, a superintendent of child welfare under the London County Council. Miss Clarke also gave evidence on Dr. Bateman's behalf, stating that he had attended some of the children of whom she had charge, and his conduct in every respect had been that which was expected in a medical man. Mrs. Bateman said that her husband was suffering from a breakdown in health. Since the list of the convictions, in July, 1926, he had been an abstemious man.

After the Council had deliberated in private the President, addressing the Council's Solicitor, said:

In the absence of Mr. Bateman, the Council have had some difficulty in coming to the conclusion that the evidence asked for at the original hearing has been fully supplied and, in order to give Mr. Bateman the opportunity of supplying that evidence in satisfactory amount and character, they have adjourned the hearing until the meeting of the Council in May 1928, when Mr. Bateman will have a further opportunity of producing satisfactory evidence on his own behalf from his fellow practitioners and others.

The next case was that of Thomas Blaney, registered as of London Road, Norbury, against whom a conviction for drunkenness had been proved, and also the fact that he had been drunk or under the influence of drink when certain patients (named) were under, or were seeking, his professional care (SUPPLEMENT, December 4th, 1926, p. 237). Dr. Blaney attended, and was also represented by Mr. G. A. Davis, a solicitor. He put in letters from Dr. J. Sinclair, Dr. W. Edwards and Dr. W. A. MacWilliam, testifying to his exemplary conduct during the last twelve months, and stated that he had entirely given up the use of intoxicating liquor. The President, addressing Dr. Blaney, said:

I have to inform you that the Council have considered carefully the evidence as to your character and conduct since you were laid here, and they are satisfied that the evidence in your favour is sufficient. They have, therefore, decided not to direct the Registrar to erase your name from the Register.

##### Misleading Certification

The same result was reached in the adjourned case of Jogesh Chandra Bose, registered as of Cherrywood Road, Bunningham, against whom it had been found that he had issued a certificate in a lax and careless manner (SUPPLEMENT, June 11th, 1927, p. 235). Dr. Bose was represented by Mr. Oswald Hempton, who put in testimonials on his behalf by Drs. B. A. Lloyd, E. Bulmer, L. E. Samyraseen, K. M. Parthy, and B. S. Jun. The City of Birmingham Education Authority, which had brought forward the charge, offered no further evidence. The Council decided not to direct the Registrar to erase Dr. Bose's name from the Register.

##### Sale of Scheduled Poisons by Unqualified Assistant

The Council next took the case of the three Glasgow practitioners—Dr. Lawrence Crombie, Dr. Elmer Gelfer, and Dr. William Mason Hamilton—against whom it had been found at the previous hearing that they had kept an open shop or other place where scheduled poisons, or preparations containing such, had been sold to the public by an assistant not legally qualified to sell poisons, under the cover of their own qualifications (SUPPLEMENT, June 11th, 1927, p. 230).

All three respondents were present at the resumed hearing, and Mr. Oswald Hempton, on the instructions of the Medical Defence Union of Scotland, represented Dr. Crombie and Dr. Hamilton. Dr. Gelfer appeared on his own behalf. The Pharmaceutical Society, which had brought the complaint, was represented by Mr. W. H. Quinell, solicitor.

The case of Dr. Hamilton was first taken. No additional evidence was offered against Dr. Hamilton by the complainant, and Mr. Hempton put in letters testifying to Dr. Hamilton's excellent professional and personal character from Dr. D. Duff, Dr. A. Watt and Dr. I. Murray. It was also stated on behalf of Dr. Hamilton that since the previous hearing he had converted what had previously been an open shop into a place used solely as a dispensary for the use of his own practice, there was no longer any sale to the public.

The Council, after private deliberation, did not see fit to direct the Registrar to erase Dr. Hamilton's name.

On the case of Dr. Crombie Mr. Quinell said that the Pharmaceutical Society had proceeded at the end of October to make a further inquiry into the conduct of the premises occupied by Dr. Crombie as a medical hall or open shop. An inspector of the Society, in company with another person, visited the place and found a young lady assistant in charge. On asking for a box of Rankin's ointment it was supplied, though on a further request for lysol the assistant stated that she did not keep in things of that kind in the shop. The ointment, which was used for destroying vermin in the head, was clearly marked "Poison." In reply to questions after the inspector had revealed his identity the assistant stated that she was not legally qualified to dispense poisons, that she had been employed for three years by Dr. Crombie and dispensed his prescriptions, except those containing poisons.

Mr. Hempton, on behalf of Dr. Crombie, said that he could not admit the facts, and he proceeded to call the assistant in question, Miss Douglas, who in evidence, stated that immediately after the previous hearing of the case all preparations containing poisons were sent to a chemist at some distance. Mr. Armstrong, who was called by the Pharmaceutical Society, stated that he had seen Dr. Crombie wanted to use in his own practice at which he kept under lock and key. Strict instructions were given

[illegible]

The Court said it did not believe Dr. Giller was in the shop at the time of the shooting. The Court said it

[illegible][illegible]

*Dental Cases*  
Two cases were sent to the Council by the Dental Board. The first was a case of a dentist who had been convicted of a crime. The second was a case of a dentist who had been convicted of a crime. The Council decided to direct the Board to make an inquiry into the matter. The Board reported that the dentist had been convicted of a crime. The Council decided to direct the Board to make an inquiry into the matter. The Board reported that the dentist had been convicted of a crime. The Council decided to direct the Board to make an inquiry into the matter.

It is the case that of Frank Ernest Coe registered as a  
Dentist in Peabody, Maine, 1921 the charge was that he  
was a part member of an approved society to sign a  
Government dental letter that a denture had been com-  
pleted and had received from the approved society money for the  
denture when in fact the work had not been completed. Mr Coe,

who did not appear before the Dental Board, answered before the Council and explained the entire matter. The conduct of the patient made it seem unwise to him to proceed to compel the workman to hatch, but he did in fact complete it later and the patient had expressed himself entirely satisfied with the result. He had had no intention of doing anything wrong in receiving his payment and this was the first time in forty years that he had been in trouble. His conduct had been called in question and he had been told that the next inquiry into the case would be a severe one and he had been told that the Dental Board would be called upon to remove him and remit him back to the Dental Board advising Mr. Cow to be present on the next occasion.

### EXECUTIVE COMMITTEE

THE Executive Committee of the General Medical Council met under the chairmanship of Sir DONALD MACALISTER on November 21st. Several of the more important matters considered, such as the position with regard to practice in the Dominions, were touched upon by the President in his address to the Council on the following day (SUPPLEMENT, November 26th p. 210).

*Fascism and British Practitioners in Italy*—Correspondent was read with regard to a request made to a British practitioner in Italy to join the Fascist Medical Syndicate. On inquiries being made through the British Embassy in Rome it was stated by the Italian authorities that inscription to the syndicate is not a political act and is not intended to be in connexion in any way with Italian politics on the contrary it signifies the joining of the individual to a new economical organization of the State and obedience to its law. The practitioner was in consequence informed by the British Government that it had no objection to his joining the syndicate. The term of membership however, was said to be unsuitable in some respects for persons not Italian subject, but the Italian authorities suggested that probably no objection would be raised if certain questions were answered, and that if any local difficulty arose it should be referred to the Ministry for Foreign Affairs.

*Practice in Spain*.—Further correspondence has taken place through the Foreign Office with the Spanish authorities with regard to the application of a British practitioner to be allowed to take the examination of *Peritida* in order to obtain permission to practice in Spain. It was now stated that the Spanish authorities were willing to move in the matter of establishing a treaty of reciprocity with regard to medical practice. The committee decided to inform the Privy Council that the correspondence in relation to the practitioner's application had been received and recorded but that in the circumstances the committee did not propose at present to take active steps towards a formal agreement for medical reciprocity with Spain.

*Optometry in a British Colony.*—An ordinance recently passed in British Honduras for the registration of persons practising optometry was forwarded for the committee's observations. It provides that registration is necessary in order to practice optometry and the qualifications for registration are an optical diploma in Great Britain or a diploma granted by a body recognized by the Committee on Medical Registration. There is no direct reference in the provisions to medical practitioners, but the penalties exempt medical practitioners who assume the title of oculist and administer drugs for optical purposes. The Executive Committee decided to request the Colonial Office to forward to the authorities of British Honduras a copy of the memorandum by the president relating to the official recognition of opticians (SUPPLEMENT, June 11th 1927 p. 235).

The Society of Actinology and Actinotherapy" - a communication was read from the Board of Trade requesting an application from the Society of Actinology and Actinotherapy for a licence to enable it to be registered without the use of the word 'limited'. The committee decided to offer no observations except to suggest that it should be made clear that the diplomas and certificates proposed to be granted by the society did not confer any qualification recognized by law for the diagnosis and treatment of disease otherwise than under the personal supervision of a qualified medical practitioner.

### BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH** NUNEATON AND TAMWORTH DIVISION—An ordinary meeting of the Nuneaton and Tamworth Division will be held at the Nuneaton General Hospital on Wednesday, December 14th, at 3.30 p.m. Agenda—Business arising out of minutes the last meeting, a joint honorary secretary paper by Dr Brunsford. The dinner of the English Division will be held in the Globe Hotel, Birmingham, on Friday, December 9th, at 7.30 p.m. The dinner will be preceded by a meeting at 7 o'clock when Mr. Curd will read a paper on surgical practice at the Cumberland Infirmary eight years ago. The Executive Committee will meet at 6.30 p.m. Tickets for the dinner (10s. 6d., exclusive of wine) will be obtainable at the hotel from the secretary.

**BONNER COUNTIES BRANCH** ENGLISH DIVISION—The annual meeting of the West Hants Branch will be held on Wednesday, December 14th, at 2.45 p.m., at the Yeastown Hospital, Sherborne. Cases will be shown and discussed. Dr. J. Gerald Pearce will read a paper entitled "The problem of the neurotic abdominal cavity." Dorset are particularly requested to note this date and to attend the meeting.

**DORSET AND WEST HANTS BRANCH** WEST DORSET DIVISION—A meeting of the West Dorset Division will be held on Thursday, December 14th, at 2.45 p.m., at the Yeastown Hospital, Sherborne. Cases will be shown and discussed. Dr. J. Gerald Pearce will read a paper entitled "The problem of the neurotic abdominal cavity." Dorset are particularly requested to note this date and to attend the meeting.

**FIFE BRANCH**—A clinical meeting of the Fife Branch will be held in the Maternity Home, Townsend Crescent, Kirkcaldy, on Thursday, December 15th, at 3.30 p.m. Mr. J. W. Struthers (Dunburgh) will address the meeting on the surgical treatment of duodenal ulcer.

**KENT BRANCH** ISLE OF THANET DIVISION—The annual dinner of the Isle of Thanet Division will be held on Tuesday, December 13th, at 8.15 p.m., at the Albion Hotel, Broadstairs. Members are asked to notify the honorary secretary of their intention to be present not later than Monday, December 12th. It is hoped that members will make a special effort to attend and bring guests.

**LINCOLN AND CHESHIRE BRANCH** MANCHESTER DIVISION—A meeting of the Manchester Division will be held at the Skin Hospital, Quay Street, Manchester, on Tuesday, December 13th, at 9 p.m. Light refreshments will be served at 8.30. The following programme has been arranged: a short lecture, with case Dr. Savatard. Precocious conditions of the skin. Dr. Dyson. Persistent urticaria. Dr. Gibson. Injection treatment of varicose veins—lichen planus. Dr. Mumford. Routine physical examination in skin diseases. Drs. Reed and Higgins. Demonstration of lamps in the light department at 10 p.m. It is hoped that every member will try to attend, and medical friends introduced by members, will be welcome.

**METROPOLITAN COUNTIES BRANCH** CAMBERWELL DIVISION—A clinical meeting of the Camberwell Division will be held at St. George's Hospital, Camberwell, on Tuesday, December 13th, at 3.30 p.m. Cases will be shown by members of the hospital staff.

**METROPOLITAN COUNTIES BRANCH** KENSINGTON DIVISION—A general meeting of the Kensington Division will be held at the Kensington Palace Mansions Hotel (Meirick Rooms), De Vere Gardens, W.8, on Wednesday, December 14th, at 8.45 p.m. An address will be given by Sir William Willcox entitled "Diabetes its etiology and treatment." A cordial invitation to attend is extended to all medical non-members of the Association in the Division and light refreshments can be obtained at moderate charges during the meeting. Smoking. Members who intend to enter this year for the Treasurer's Cup golf competition are requested to notify the honorary secretary as soon as possible, enclosing entrance fee of 2s. 6d.

**METROPOLITAN COUNTIES BRANCH** LAMBETH AND SOUTHWARK DIVISION—The clinical meeting which was to have been held at the Belgrave Hospital, Clapham Road, on Wednesday, December 14th, has been cancelled. There will be a meeting at the Lambeth Club, Coldharbour Lane, S.W.9, on Wednesday, December 14th, at 9 p.m. instead, when a paper on menopausal haemorrhage will be read by Mr. R. Christie Brown of the obstetric department, Lambeth Hospital. At a meeting of the Division to be held on day January 25th 1928, Dr. A. G. G. Thompson the newly appointed medical officer of health for Lambeth will read a paper on the Schick test.

**METROPOLITAN COUNTIES BRANCH** LEWISHAM DIVISION—A meeting of the Lewisham Division will be held at the Town Hall, Catford, S.E.6, on Tuesday, December 20th, at 8.45 p.m. Dr. Ross Jordan will read a paper on the differential diagnosis of pulmonary tuberculosis.

**METROPOLITAN COUNTIES BRANCH** ST. PANCRAS DIVISION—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, December 13th, at 9 p.m. Dr. Eric Gordon Fleming will read a paper on chiropractic and common sense.

**METROPOLITAN COUNTIES BRANCH** WILLESDE DIVISION—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, N.W.10, on Wednesday, December 21st, at 9 p.m. A paper on public education in health will be read by Dr. G. F. Buchanan, medical officer of health, Willesden Urban District, and Dr. A. R. Battie, a student of health.

**MIDLAND BRANCH** CHESTERFIELD DIVISION—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, to-day (Friday, December 9th) at 8.15 p.m. Mr. G. O'Rourke, LL.D., will speak on medicine and the law.

### Some Work of the Week

**Naval and Military Committee.** The Naval and Military Committee, at a meeting on November 29th, elected Dr. F. W. Goodbody (London) chairman in succession to Sir Richard Luce, M.P., who acted as chairman from 1921 to 1927. This period, covering the general reorganization of the medical services following upon the dislocation of war and demobilization, has been one of exceptional activity on the part of the Naval and Military Committee, and the committee placed on record its cordial appreciation of the great services of the retiring chairman, notably in the dispute over the position of retired surgeon commanders R.N. and the general improvement secured in conditions of service in the R.A.M.C. The committee also recorded its appreciation of the special services rendered by the late Major-General Sir William Mepheison, who was a member of the committee from 1920 to 1927 and an unfailing source of strength to the Association in dealing with those technical matters with which he was so familiar. The committee had before it representations made by the Portsmouth Division as to certain conditions of service in the Naval Medical Service considered by the Division to be unsatisfactory. Representatives of the Division attended the meeting and took part in a full discussion of the matter, after which it was decided to make representations to the Admiralty in respect of some of the points put forward. In connexion with an invitation from the secretary of the International Congress of Military Medicine and Pharmacy, which is to be held in London from May 6th to 11th, 1929, the committee is reporting to the Council in favour of the British Medical Association's participation in the Congress and the appointment of a representative of the Association on its organizing committee. The committee has under consideration the question of the concession of free passages between this country and India for Indian officers of the I.M.S. who entered the Service by competitive examination in London. It appears that whereas passage concessions are granted to Indian members of the I.C.S. who have entered the Service under similar conditions, these are not granted to members of the I.M.S., and the committee is taking the matter up with the India Office.

### Spa Practitioners' Group

In October the Council of the Association sanctioned the formation of a group of spa practitioners within the constitution of the British Medical Association, to consist of members who "regularly prescribe the mineral waters or baths of the spas in which they reside, or who are on the staff of a hospital or clinic where the use of local mineral waters is part of the routine treatment," and permission was given for the first meeting of the Spa Practitioners' Group to take place in London at an early date. Accordingly, on November 23rd, a conference composed of representative practitioners from the following spas met at the B.M.A. House, Bath, Buxton, Droitwich, Harrogate, Leamington, and Llandudnod Wells. The conference elected as its chairman Dr. F. G. Thomson (pre-President of the Association), and the following group committee for the session 1927-28: Dr. R. Acherley (Llandudnod Wells), Dr. J. B. Burt (Buxton), Dr. F. Clayton (Leamington), Dr. Hugh Powell (Cheltenham), Dr. G. L. K. Pringle (Harrogate), and Dr. F. G. Thomson (Bath). The committee is holding its first meeting on Thursday of this week at the Association's House.

### Medical Appointments Abroad

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas, which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

**HOLLAND DIVISION**—A meeting of the Holland Division will be held at Spalding on Friday, January 6th 1928 at 5 p.m. Sir Humphry Rolles, of Blk. Regius Professor of Physics in the University of Cambridge, will give a British Medical Association Lecture on the medical aspects of idiopathic rashes.

**NORTH OF ENGLAND BRANCH LUTON DIVISION**—The Luton Division is planning to have a singing concert in the Buffalo Hotel, Luton, on December 14th at 8 p.m. A short programme of music and songs will be provided and Professor Hume (Newcastle) will deliver an address on diabetes.

**NORTH BRANCH NORTH DIVISION**—A general meeting of the North Division will be held on Wednesday, December 14th at 8.30 p.m. in the Medical Library.

**SOUTHERN BRANCH JERSEY DIVISION**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, December 15th, at 8.30 p.m. Mr C. F. Cuthbert will read a paper entitled "From Old to New".

**SOUTH WALES AND MONTGOMERYSHIRE BRANCH CARDIFF DIVISION**—A meeting of the Cardiff Division will be held in the Engineers Institute Park Place, Cardiff, on Thursday, December 15th, at 8.30 p.m. Professor W. E. Dixon, M.D. F.R.C.S., will give a British Medical Association Lecture on the trend of thought in modern therapy. After the lecture Professor Dixon will be entertained at a dinner at the Park Hotel, Cardiff (tickets 5 each). Members intending to be present are requested to notify the secretary as early as possible in order that catering arrangements may be made.

**SOUTH WALES BRANCH CROYDON DIVISION**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, December 14th, preceded by tea at 4 p.m. Mr A. H. Todd will give a lantern demonstration on selected orthopaedic cases of general interest.

**STREET BRANCH CROYDON DIVISION**—A meeting of the Croydon Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, January 5th 1928 at 4 p.m. Sir John Todd will give an address on "Where law and medicine meet". Tickets at 3.50 p.m.

**YORKSHIRE BRANCH BRADFORD DIVISION**—A continued clinical meeting of the Bradford Division and the Medical-Chirurgical Society will be held on Tuesday, December 15th.

**YORKSHIRE BRANCH SHEFFIELD DIVISION**—A general meeting of the Sheffield Division will be held to-day (Friday, December 9th) at the University of Sheffield at 8.30 p.m. when a British Medical Association Lecture will be delivered by Professor H. B. Smith on "Practical applications of recent researches on the renal functions".

## Meetings of Branches and Divisions

### EAST YORK AND NORTH LINCOLN BRANCH EAST YORK DIVISION

A meeting of the East York Division was held at Hammonds at 8 p.m. on November 16th. After supper there was a discussion on "Focal sepsis and its relation to diabetes". The members of the division, practising locally, were invited to take part. Dr. Macfarlane presided and attended by a number of visitors were present.

In opening the discussion Dr. Macfarlane referred to the various ways in which focal sepsis was said to act in relation to diabetes. He pointed out that an exaggerated importance was given to the work of Adams on subintention and of Fournier on chronic focalization. He suggested that an exaggerated importance was given to the work of Whipple, Minot and Murphy on the treatment of pancreatic diabetes. The results of the treatment were superior to those which depended on the treatment of the diabetes. Petering, who had been advocating the condition on which the results of the treatment of focal sepsis were given at 100 per cent, was asked to attend the condition on which the results of the treatment of focal sepsis were given at 100 per cent. He referred to the recent discussion at Edinburgh on the condition on which the results of the treatment of focal sepsis were given at 100 per cent. He claimed by rhinologists in this condition were capital in a general interpretation.

Dr. Gill mentioned the principal optic focus with which the condition dealt. The symptoms produced by chronic cholecystitis were described. For color infection temporary diabetes, with a large age was to be preferred to the more severe operation of cholecystitis except in typical cases of the colon.

Mr. Tuxton and Mr. Walsby spoke for the dental profession. The dental drew attention to the general condition of the body in its relation to the condition of the mouth. The general condition of the mouth might cure the focal sepsis.

Mr. Walsby pointed out how a vicious circle could be established as a result of focal sepsis due to organic disease aggravating the latter. In favour of oral sepsis having a general origin he mentioned the incidence of factors such as age of patient and diet. Prothrombin and carotene appeared to be antagonistic and statistics contrasting the populations of Halifax and Hull were given to show that in prothrombin an autosomal causing loss of calcium salts from the enamel had been suggested as a cause, this was perhaps due to lack of vitamins. Carotene on the other hand was possibly due to an autosomal.

Mr. J. R. Simpson pointed out that a septic focus could be present in the ear, nose or throat without producing obvious local symptoms, and careful examination of the nasal accessory sinuses was essential. The value of removal of nasal polyps and treatment of general suppuration in the ear, nose and throat and chronic sinusitis was mentioned as well as removal of adenoids in children and otitis.

Dr. Baxendale's remark which were contributed by Dr. Brewis in his speech were more concerned with the diagnosis of the focus such as root abscesses and sinuses. Attention was called to the possibility of finding bronchiectatic cavities and other foci in the chest by x-rays.

In the discussion which followed Mr. Upcott said that he did not agree with the idea of focal sepsis being a cause of general diabetes and did not find much improvement in most cases after removal of such a septic focus. Mr. R. J. Oliver pointed out the lack of complete knowledge of the paths of infection throughout the body. Dr. Lawrie considered that a septic focus must be treated and that it was the most important part of the treatment.

### KENT BRANCH DOVER DIVISION

A meeting of the Dover Division was held at the Lord Warden Hotel, Dover, on November 24th. Mr A. L. Morro of the Alexandra Orthopaedic Hospital, Swanley, opened a discussion on the treatment in general practice of some common deformities. Reference was made to the county orthopaedic scheme. Many members took part in the interesting discussion which followed. The meeting which was preceded by a dinner was a great success.

### METROPOLITAN COLTIES BRANCH LAMBETH AND SOUTHWARK DIVISION

A very interesting meeting of the Lambeth and Southwark Division was held at the Lambeth Carlton Club, Goldharbour Lane, S.W. 9, on November 22nd when Dr. P. G. W. Sebby was in the chair. Dr. E. H. Jebbs presented his report as representative at the Annual Representative Meeting held in Edinburgh, 1927. The report was detailed and many questions were asked. A vote of thanks was accorded to him for his excellent report. Mr. E. P. B. Ockman delivered a carefully prepared and instructive paper on common disabilities of the foot and ankle.

### SHEREPSHIRE AND MID-WALES BRANCH

The fifty-eighth annual general meeting of the Shropshire and Mid-Wales Branch was held at the Salop Infirmary on October 20th. Some thirty members were present. The following officers were elected:

President: Dr. W. H. Lewis. Representative in Representative E. W. Dr. Macfarlane. Honorary Secretary: Dr. F. D. Dwyer.

Dr. G. C. Asker, Deputy Medical Secretary of the Association, was present and gave valuable advice on various matters.

Dr. Lewis delivered his presidential address on "Notes on the development of English sanitary law. Starting from the thirteenth century, he described the earlier measures of public health and traced their development up to 1875 when the Public Health Act was passed. The subject of the address aroused much interest and the president was accorded a very hearty vote of thanks.

### Annual Dinner

The company subsequently adjourned in the afternoon to the Shrewsbury for the annual dinner being joined by several other members and guests. Seventy-one in all. Mr. Norton, chairman of the Montgomeryshire County Council, was one of the principal guests and proposed the toast of the British Medical Association in a very happy speech. Dr. G. C. Asker responded very ably in a speech interspersed with witty remarks which drew roars of laughter. The President, in responding to the toast of his own health, pointed out that he was the first member of Montgomeryshire to hold the office and hoped he had created a precedent thereby. There was a general consensus of opinion that the dinner was one of the most successful and enjoyable the Branch had held.

### SOUTHERN BRANCH WINCHESTER DIVISION

A meeting of the Winchester Division was held at the Royal Hants County Hospital on November 16th. There was a large attendance. It was decided that all matters in connection with the Executive Committee for 1928 be referred to the Executive Committee to carry through on similar lines in 1927. A hearty vote of thanks was accorded to Mr. Lockhart Stephens on his resignation of the post of honorary secretary to the Southern Branch for his past services and work for the Division and the congratulations of his fellow members were conveyed to Dr. C. Edwards on his election as mayor of Andover. A communication from the Executive Committee approving of the principles of the plan of the Association's pamphlet "Contributory Schemes for Hospital Benefit" was received and accepted and the Executive Committee was instructed to report further on local arrangements in Winchester.

Mr. B. H. Proctor, of the Royal Hants County Hospital, could not attend a very informative paper on the treatment of otitis media in children. Mr. Pidcock stressed the importance of prophylaxis by more careful and thorough treatment of all infections of the nasopharyngeal region and pleaded for greater insistence on public and other swimming baths. He then dealt in detail with the acute case strongly advocating early treatment when the case was seen before rupture of the paranasal sinuses. A description of the main points in connection with treatment of the chronic case and its common sequelae followed and on the conclusion of the paper the speaker was very heartily thanked for his valuable contribution.

A good dinner ensued in which many of the present took part.

## National Insurance

### LONDON PANEL COMMITTEE DINNER

#### *Presentation to Dr and Mrs Cardale*

THE eighth annual dinner and dance of the London Panel Committee, which took place at the New Princes Restaurant on December 1st, was made the occasion of a presentation to Dr H J Cardale, chairman of the committee, and Mrs Cardale.

The presentation was made by Dr E A GREGG, who spoke as the representative of all Dr Cardale's colleagues on the Panel Committee and of a very large number of practitioners outside that body. It was no mere matter of form, he said, that Dr Cardale should have been re-elected chairman of the Panel Committee year after year; it was a continuing expression of the esteem and affection of the members of the committee. The amount of work which Dr Cardale had done on behalf of the profession was such as few men could possibly undertake, for besides acting as chairman of the Panel Committee, which involved attendance at many meetings of subcommittees, he was a zealous representative of London practitioners on the Insurance Committee for the county and on the Insurance Acts Committee. Although Dr Cardale was in the habit of expressing his views with vigour, he had the grace of never being afraid to admit a mistake, and for what he was, as well as for what he had done, his colleagues held him in high honour.

Dr Gregg then presented to Dr and Mrs Cardale, on behalf of the committee, a silver tea and coffee service, and to each of them a cheque.

Dr CARDALE, with much feeling, expressed his appreciation of what he described as a most generous gift, and his pleasure that it should have been made by his old friend and colleague, the vice chairman of the committee, Dr Gregg. Another source of satisfaction to him was that his wife should be associated in the presentation, because without her co-operation it would not have been possible for him to have devoted so much time to public work on behalf of the profession. He could not feel that he deserved thanks for what he had done, but rather that he should thank his colleagues for having given him the opportunity to have so absorbing an interest. As for the Panel Committee, he believed that it might be of even yet greater influence. The more efficient the service under the National Insurance Act the greater the credit and honour to the medical profession. The Act was by no means perfect, but he looked forward to the time when under the Act there would be provided as perfect a medical service as could be found the world over.

Dr J SMITH WHITTAKER, in proposing the toast of "The London Panel Committee," said that so far as he was aware there was nothing analogous to the committee in the sickness insurance system of any other country. When he himself entered medical practice thirty-five years ago the town in which he practised, in common with many other towns, was much disturbed by what was then known as 'the battle of the clubs'. Practitioners were defeated in that fight because there was then no national professional organization capable of supporting the efforts of local bodies. The British Medical Association had been approached, however, and one of the most important questions, when reorganization took place in 1902, was with regard to contract practice. During the ensuing nine years the question was so thoroughly thrashed out, and the organization so well built up, that within one month from the introduction of the Insurance Bill the British Medical Association was able to formulate the desirable amendments, and these received the practically unanimous support of the profession, ultimately passing into law.

Dr A F HEALD, treasurer of the committee, responded to the toast, and expressed some regret that while the Panel Committee did such excellent work it should receive so little encouragement from a very large proportion of the insurance practitioners in London. A rather greater interest in its doings on the part of those for whom it worked would be very acceptable.

The dinner concluded with a dance.

### LONDON INSURANCE COMMITTEE

#### *Appeals to the Ministry by Insured Persons*

At the meeting of the London Insurance Committee on November 24th it was reported that two insured persons whose complaints against their practitioners had been dismissed by the committee, had appealed to the Ministry and that in one case the Ministry had found for the appellant and in the other for the respondent practitioner. The first case was one which had been before the committee on more than one occasion. The insured person, who was a branch secretary of an approved society, complained that his practitioner whom he went to see for bronchial trouble, made only a cursory examination in particular that he carried out a full scope examination through his clothing placing the

instrument over the lapel of his muer coat his overcoat being unbuttoned. He had offered to remove his clothing, but the practitioner said, "I have not time for that. To examine patients stripped would be the work of three doctors and I should never get done." The decision of the committee, after some amendments had been lost, was that the practitioner had not failed to comply with the terms of service. Against this decision the insured person appealed to the Ministry, and both parties were represented by counsel. The Minister's decision, after receiving the report of his officers, was that the appeal of the insured person must be allowed, the respondent to pay all the costs of the appellant. The final passage in the report made by the officers of the Ministry was as follows:

"It would be widely outside our province to attempt to formulate any general rule as to the methods which a medical practitioner should adopt in examining his patients. We are concerned only with the evidence given in this particular case, and on that evidence we feel bound to conclude:

"1 That in this case auscultation of the chest was necessary for the purpose of ascertaining the condition of the lungs the respondent stated that this was the purpose of his auscultation.

"2 That auscultation through the layers of clothing worn by the appellant when examined could not enable the respondent to ascertain the condition of the lungs.

"We therefore find the respondent did not render the proper and necessary medical services which he is required to render under Article 8 (1) of the terms of service for insurance practitioners."

In the other case the Ministry found that there had been no breach of the terms of service, and the Minister dismissed the appeal, making no order as to costs, but suggesting that, in the special circumstances of the case, the committee might reimburse the practitioner. It appeared that the accusation had arisen out of a misunderstanding due to the deafness of the insured person. It was also stated that the insured person, in an interview with the clerk of the committee, had expressed his willingness to withdraw the complaint, but the Medical Services Subcommittee proceeded with it, and found that there was no foundation for the allegation against the practitioner, whereupon the appellant refused to accept without question a finding that he had made a baseless allegation.

## Correspondence.

### *Ophthalmic Clinics for Insured Persons*

SIR,—If the approved societies have the best interests of their members at heart they will not be in favour of establishing ophthalmic clinics. What the members want is to be able to consult ophthalmic surgeons as if they were private patients, and to come at an hour which is most convenient for them. Among elderly patients this is often in the middle of the day.

Providing that all work is done by ophthalmic surgeons, I think we should be willing to accept a fee of 10s 6d per patient. If this remuneration is outside the menus of the societies—though I hardly think it is—I believe the members applying for the benefit would be willing to contribute the deficiency in order to have the services of ophthalmic surgeons.

A short time ago an optician told me that in looking over his books for the past quarter he found that all members who came to him had purchased spectacles at sums up to £1 12s 6d in excess of the amount allowed by the societies. Where members are willing to make these additional payments for optical appliances they would certainly be willing to pay say, 2s 6d, if they could be treated by ophthalmic surgeons—I am etc,

Watford, Nov. 26th

J E PRESTON

SIR,—In this matter two arguments alone will hold that of economy and that of efficiency.

(a) Applying these to the present scheme we must first have a full statement of facts before we decide either that it be restricted or be maintained at lower fees. The former—restriction—might well be tried, without any real loss of efficiency, before embarking on costly clinic equipment. I think all working the ophthalmic benefit scheme will admit that many cases are "slight." Many patients tell us they did not want to see us they only wanted reading glasses. In such a pathological condition is a rarity. But the panel doctor cannot conscientiously refer such to an optician. His choice, therefore, should be with the patient. This would, in my opinion, restrict the service by from 25 to 40 per cent. I think most ophthalmic surgeons would agree to such a policy of restriction, given assurance that the right of the patient to claim specialist service was conserved. No complaint, I understand, is made as to the efficiency of present arrangements.

(b) That of clinics is doubtful. Hospital surgeon are, in the provinces at any rate, working the scheme so that treatment in cases demanding it, is continuous. The patient is at ease

post on Tuesday morning

## CURRENT NOTES

## Some Committee Work at Headquarters

On December 8th the committee elected by the Spas Practitioners' Group held its first meeting, and appointed Dr E. C. Thomson of Bath (President of the Association in 1925) chairman for the session. The committee is submitting to the Council through the Insurance Acts Committee a series of recommendations to cover the whole question of provision of spa treatment for insured persons at the several spas in the event of this form of treatment being adopted as an additional benefit under the Act by the approved societies.

The Maternity and Child Welfare Subcommittee on December 9th discussed with a deputation from the Association of Infant Welfare and Maternity Centres the policy of the formation of infant welfare centres for the benefit of mothers who are in a position to pay for such a service. A subcommittee was appointed consisting of the chairman (Dr William Pitterson, Wilkesdon), Dr L. R. Kothergill, Dr Rose Mollon, Dr Christine Murrell and Dr W. Ranton, to draft a full report on the subject and to formulate recommendations for submission to the next meeting of the subcommittee. The subcommittee also has under consideration the effect of the adoption of contributory schemes by voluntary hospitals upon the policy of education authorities in providing for the hospital treatment of school children found on inspection to be defective. This difficult problem is receiving careful consideration from both the Hospitals Committee and the Medico-Political Committee.

## Annual Handbook of the Association 1927-28

The Annual Handbook of the British Medical Association for 1927-28 is now available. Copies can be had by members gratis and post free, on application to the Medical Secretary, British Medical Association House, Tavistock Square, W.C.1. Primarily intended as a book of reference for honorary secretaries and other workers of the Association, the Handbook should prove of interest and assistance to all members. The new edition is completely revised. It contains the decisions of the Representative Body of the Association on matters of policy, particularly about medical charities; information as to the constitution of the Association, and as to the British Medical Journal (the circulation of which is now 36,850 copies weekly) and other publications of the Association; lists of the members of the Council and central committees, officers and officials of the Association; and much other information regarding the work of the Association. To non-members the book is on sale at 3s. 6d. (post free 3s. 9d.).

## Meetings of Branches and Divisions

## DUNDEE BRANCH

A meeting of the Dundee Branch was held in the Medical School University College, Dundee on November 23rd when Dr A. H. Macklin gave a lecture on a Polar expedition with special reference to the medical aspect from his experiences in the *Endurance* and *Quest* expeditions to the Antarctic. The need for careful preparation was emphasized in the prevention of curves, the measures used were (1) dietetic, (2) elimination of toxins. Under the first heading came the use of Mediterranean sea water with the addition of 5 per cent alcohol to prevent freezing, dried and condensed milk, peas and lentils for germinating and the use of locally killed meat. The lodging quarters were described in detail. In the elimination of toxins autogenous sources were ruled out by careful medical selection of personnel and by rest on a daily movement of the bowel. With regard to frost bite local prevention consisted in placing and maintaining an air space between the skin and cold outer air by means of suitable clothing. As initial treatment gentle heat was used, this was usually applied by the patient's own body, or in the case of the feet by the body of one other person; sometimes relays were required, rubbing the affected part with snow was contraindicated. In the production of snow blindness it was found that dull day were the most dangerous; this was not entirely due to the continued accommodation necessary, but by lack of contrast in the surrounding since now goggles which did not give increased definition in diffused light prevented the onset. As to alcohol an occasional tot did no harm but the general rule was abstinence. The wanderings of the *Endurance* expedition were followed from the wreck of the ship to the eventual rescue from Elephant Island. The common fauna of the Antarctic were described. The lecture was illustrated by excellent lantern slides.

On the proposal of the president Dr George C. Burgess a vote of thanks was accorded to Dr Macklin for his very interesting and enjoyable lecture.

## NORTH OF ENGLAND BRANCH COVENT DIVISION

There was a good attendance of members of the Covent Division at the first combined general and social meeting of the winter season held in the Railway Hotel, Coventry on November 23rd.

After going through the business agenda and hearing the report of the representative on the work done at the Annual Representative Meeting which led to some discussion, the members adjourned to the dining room where they entertained Mr J. S. Arde, ophthalmic surgeon, Newcastle-on-Tyne to a complimentary supper when Dr Morrison (Catchgate) took the chair.

Afterward Mr Arde gave a most instructive and practical lecture on some commoner diseases of the eye and their treatment in which he dealt in a concise and helpful way with the external disease of the eye met with in general practice and the methods of treatment adopted in the ophthalmic department of the Newcastle-on-Tyne Royal Victoria Infirmary. The address was well received and the vote of thanks to the lecturer proposed by Dr Morrison (Blackhill) was carried with acclamation.

## NORTH OF ENGLAND BRANCH DARLINGTON DIVISION

The annual dinner of the Darlington Division was held at the Queen's Hall, Darlington on December 1st. The chair was occupied by the president Dr P. Marshall and a company of forty-two persons. The toasts were: The Protection of Medicine, The General and The Ladies and the toast of the local verger was amusing and some music was played. In the course of the evening the annual golf trophy was presented by the president to the

third time in succession to Dr Hug. The musical side of the programme was supplied by Drs Dawson, Kirk and Forsyth and it was midnight before the happy company dispersed. The bill of fare and the toast list were enhanced with a variety of apt quotations from English classics, old songs and other sources.

**OXFORD AND READING BRANCH WINDSOR DIVISION**  
A MEETING of the Windsor Division was held on December 2nd, when Dr J. J. PATERSON was in the chair. Dr ELIZABETH SLOAN CHESLER moved the following resolution:

In the opinion of this meeting the establishment of periodical medical and dental examinations of all persons insured under the national insurance laws is urgently called for as in economic position, having regard to the return so to be obtained in health and productive efficiency, every such insured person when accepted as a patient on a doctor's panel shall be by that doctor medically examined and the result of that examination placed on record. Preliminary examination should apply also to dental examination when that additional benefit is included and available under the national insurance laws.

Dr Sloan Chesler drew attention to the greatly increased expectation of life found among those insured with the Metropolitan Life Assurance Company in America who had submitted to the "annual overhaul." She pointed out that under the present panel system doctors were not able to examine their patients when they were supposed to be in normal health, so that many cases of disease were not detected until too late. She showed that any-thing that tended to lower the standard of accuracy in a doctor's work lowered his or her personal professional moral. The sum of the panel doctor must be the good health of all his patients and not merely to treat them when ill.

Dr PATERSON summed up the resolution as "school medical inspection for adults." He referred to the enormous break in medical care between the ages of 14 and 16, when both boys and girls needed it, and suggested that increased frequency of examination might well begin by requiring panel doctors to examine young people, at a special fee, when they came under the national health insurance at the age of 16. This examination would be most easily performed at some central place, such as the local general hospital. The inspection might be repeated between the ages of 21 and 25. Dr PATERSON added that the general improvement of health had falsified the calculations of the insurance societies, who were all richer than they expected to be, and the fee for special examination could be well afforded.

Dr ELIZABETH CHESLER said that for the first six months no sick benefit could be drawn by those aged 16, and the societies could well afford to pay a fee out of the money thus saved. She emphasized the great advantage of an examination which gave the panel practitioner a knowledge of each patient in normal health, it was unsatisfactory to treat persons seen for the first time only when very ill. Dr LLOYD and Mr SERRIOT also joined in the discussion.

It was unanimously decided to submit the resolution to the Representative Body of the British Medical Association.

#### PUNJAB BRANCH

The first meeting of the session of the Punjab Branch was held on November 2nd under the chairmanship of Colonel H. M. MACLEZIE when Dr PREY NATH SUR read a paper on the recent advances in the diagnosis and treatment of pulmonary tuberculosis. The lecture was illustrated by pictures shown with the aid of a lantern. Dr Suri dealing with recent work in diagnosis, and on the importance of radiograms, and especially the use of lipiodol. He also mentioned 'vital capacity' as an important aid in diagnosis. Turning to the treatment side, although best results had been obtained by controlled auto-inoculation and systematic medical supervision, individualization of treatment was an important factor in the use of tuberculin and phototherapy. These were potent aids in treatment but with lack of care in the selection of cases might do much harm. Dr Suri also, in passing, referred to Spahlinger's treatment and the use of krysolan and sanocrysin. In cases in which purely medical measures had failed, artificial pneumothorax, thoracoplasty and phrenicotomy were important aids in prolonging life. "The message of the twentieth century," he concluded, "was a message of hope, not only for the early but even for the advanced case."

At the conclusion of the paper a discussion was opened by Colonel MACLEZIE in which Colonel RAI, Major HARPER NELSON, Major MIRAJKER, Dr MAHARAJ KISHAN, and Dr V. NATH took part.

#### SOUTHERY BRANCH PORTSMOUTH DIVISION

At the Queen's Hall, Southsea, on December 8th a most successful meeting was held to which the local clergy were invited as private guests of the members. Over a hundred were present, of whom seventy-eight sat down to supper. Dr F. M. R. WALSHE, physician in charge of the neurological department University College Hospital, gave an address on some aspects of the faith cure, ancient and modern. The discussion was opened by the Bishop of Portsmouth. He was followed by many clergymen of various denominations who gave their views briefly. The debate excited so much interest that owing to the late hour the meeting had to be closed before all those interested in the subject could take part in the discussion.

The Division will be pleased to see at their meetings any members of other Divisions. A list of fixtures can be obtained from the honorary secretary, Dr F. C. B. Gittings, 15 Brading Avenue, Southsea. The annual dance in aid of medical charities is to take place on January 10th at the Savoy Café.

### Association Notices.

#### BRANCH AND DIVISION MEETINGS TO BE HELD

**PIPE BRANCH**—The Council of the Pipe Branch is arranging a complimentary dinner to Dr C. L. Douglas, to be held in the Station Hotel, Kinkaidy, on Thursday, December 22nd, at 6.15 p.m., tickets 12s 6d each. It is felt that the many services rendered by Dr Douglas to the Branch and the profession generally should be recognized on the occasion of his retirement from practice. Members of the Branch wishing to bring friends may do so on condition to the secretary. Members proposing to be present at the dinner are asked to notify Dr J. M. Johnstone, joint honorary secretary, Seaview House, Leven, by December 17th.

**METROPOLITAN COUNTIES BRANCH LEWISHAM DIVISION**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, S.E.6, on Tuesday, December 20th, at 8.45 p.m. Dr Roso Jordan will read a paper on the differential diagnosis of pulmonary tuberculosis.

**METROPOLITAN COUNTIES BRANCH STRATFORD DIVISION**—A meeting of the Stratford Division will be held in the Board Room, Educational Offices, The Grove, Stratford, on Tuesday, December 20th, at 9.15 p.m., when Mr L. Carnae Rivett, surgeon to the Chelsea Hospital for Women and Queen Charlotte's Hospital, will give a lecture on pyrexia during the puerperium.

**METROPOLITAN COUNTIES BRANCH WILLESDEN DIVISION**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, N.W., on Wednesday, December 21st, at 9 p.m. A paper on public education in health will be read by Dr G. F. Buchan, medical officer of health, Willesden Urban District, and Dr N. R. Beattie, assistant medical officer of health.

**MIDLAND BRANCH HOLLAND DIVISION**—A meeting of the Holland Division will be held at Spalding on Friday, January 6th, 1928, at 3 p.m. Sir Humphry Rolleston Bt., Regius Professor of Physics in the University of Cambridge, will give a British Medical Association Lecture on the medical aspects of idiosyncrasies.

**NORTH OF ENGLAND BRANCH BISHOP AUCLAND DIVISION**—The next meeting of the Bishop Auckland Division will be held in the Cottage Hospital, Bishop Auckland, to-day (Friday, December 16th), at 8 p.m. Agenda: Correspondence, monthly circular, arrangements for annual dinner.

**NORTH OF ENGLAND BRANCH TYNESIDE DIVISION**—The Tyneside Division has arranged to hold a dinner on January 13th, 1928. Sir Robert Bolan has promised to attend, and the members of Parliament for Tyneside, Major West Russell, has been invited.

**SURREY BRANCH GUILDFORD DIVISION**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, January 5th, 1928, at 4 p.m. Sir John Colthe will give an address on "Where law and medicine meet." Tea served at 3.45 p.m.

### THE DENTAL BOARD

At the opening of the thirteenth session of the Dental Board, on November 8th, Sir FRANCIS DYLL ACLAND, Bt., the chairman, delivered an address in which he described the work of the Board during the past year. Up to now just over fifty students, whom the Board had assisted through their curriculum had qualified, and all but six or seven of them were already in practice. He also laid stress on the popular education in dental hygiene which the Board was disseminating. An experiment made in displaying dental posters on an underground railway in London had met with very great success, and similar work was being extended both in London and the provinces. An intensive campaign had been carried out with the help of the medical authorities in the county of Durham. The Board continued to bring home to various individuals the pains and penalties of practicing dentistry without registration. He had been rather surprised to find how numerous were the cases in which the Board had to take action. He was aware that the profession was greatly interested in the question of clinics. In this, as in other matters, the Board decided on the particular questions which might be brought before it, and would be ready to give the matter very careful consideration if either a definite charge was formulated against any dentist of doing, in connexion with a clinic, anything which was undesirable, or if the Board was asked to assist in the establishment of any clinic on lines to which no exception could be taken.

The Board considered two cases in which advertising was charged against dentists. Both cases were postponed in order to give the dentists concerned an opportunity of modifying their announcements on their premises or elsewhere, so as to comply with the Board's requirements. One dentist, who at the last session of the Board was charged with canvassing, and whose name was recommended by the Board for erasure from the Register, came again before the Board. The General Medical Council, to which the Board had referred the case, had, after hearing the respondent expressed the opinion that there should be further inquiry. The Board now made further inquiry, with the respondent appearing before it—he did not appear when the case was first considered—and came to the conclusion that the facts alleged against him had not been proved, and so dismissed the case.

## TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

To be Lieutenants J D Robertson and R Rutherford

## TERRITORIAL ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Lieutenant P M Speed from the active list to be Lieutenant

### PROCEEDINGS OF COUNCIL

Wednesday, December 14th, 1927

A MEETING of the Council was held at the House of the Association, Tavistock Square London on Wednesday, December 14th. In the absence of Dr Brackenbury, Chairman of Council Dr C O Hawthorne, Chairman of the Representative Body, presided. Dr Hawthorne stated that Dr Brackenbury was making a satisfactory convalescence after his operation and hoped soon to be restored to his full work in the Association. The Council signified its desire that a message should be sent to Dr Brackenbury conveying good wishes.

In addition to Dr Hawthorne the following members were present:

Mr N Bishop Harman (Treasurer) Sir Ewen Maclean (President Elect) Dr A London (Deputy Chairman of Representative Body) Sir Robert Bolla (Immediate Past Chairman of Council) Dr J Blarney Anderson Dr J Armstrong Dr F J Baidon Dr J Perry Baile Smith Dr J W Bone Dr H C Bristowe Dr G F Buchanan Dr H Guy Dain Dr C E Douglas Mr T P Dunhill Mr W McAdam Eccles Dr D E Finlay Dr T Fraser Dr F J Gomer Dr F W Goodbody Dr R Wallace Henry Dr J Hudson Dr I W Johnson Dr R Langdon Down Dr E K Le Fleming Dr R W Leitch Dr J Livingston London Dr Richard Luce M.P. Dr S Morton Mackenzie Dr G Marriott Dr J C Matthews Dr G W Miller Dr Christine Murrell Lt Col F O'Hanlon Dr W Paterson Mr J Patrick Dr R C Peacock Dr J R Prytherch Dr F Radcliffe Dr E H Snell Mr H S Soatlar Dr E A Starling Lieut Colonel Ashton Street Dr W E Thomas Dr G Clark Trotter Mr E B Turner Dr J F Walker and Mr A M Webber.

Apologies for absence were read from the President (Sir Robert Philip) the Past President (Mr Hogarth) Sir Alfred Blenkinsop Dr G B Hillman Dr E Lewis Lloyd Dr J G McCutcheon Dr J A Macdonald Dr A Mankell Mr A W Nutball Group Captain N J Roche Dr E W Lockhart Stephens Dr J Stevens Sir Jenner Verrall Sir W Wheeler and Dr W E A Worley. The Medical Secretary stated that several of these absences were due to illness.

The Chairman said that since the last meeting of the Council the deaths had occurred of Sir William Macpherson and Dr J S Darling. The former had attained a very distinguished position in his branch of the profession and he had also given most valuable service to the Association as a member of Council and in other respects. Dr Darling had been also a very useful member of Council taking part seldom in debate but always impressing his colleagues by his sincerity and ever using in his own area a helpful personal influence for the benefit of the Association and of the profession as a whole. The Council agreed to authorize appropriate letters to be sent to the relatives of the deceased members.

#### Appointment of Delegate and his substitute

The Chairman said that the Council would learn with satisfaction that Dr Brackenbury had seen his way to accept the Council's invitation to attend as the Association's delegate at

the South African Medical Congress to be held in Bloemfontein in March next (Applause). In addition it had been found that three members of the Association from this country intended to be in South Africa at the time of the Congress—namely Sir Frank Colver well known for his work in odontology, Dr H B Densham or Stockton on Tynes formerly president of the North of England Branch and Dr C D Hatrick of New Barnet honorary secretary of the East Hertfordshire Division. It was proposed that the three gentlemen also be appointed official delegates and this was agreed to.

In respect to a communication from the Ministry of Health relative to the constitution of the General Nursing Council the following names were forwarded for the Minister's consideration—namely Lady Barnett Dr A H G Burton (medical officer of health for Hford) Sir Ewen Maclean Dr Christine Murrell, and Mr A M Webber (Nottingham).

The President (Sir Robert Philip) was appointed to represent the Association at the celebration in London in May next by the Royal College of Physicians of the tercentenary of the publication of Harvey's *De Motu Cordis*.

Mr Bishop Harman was appointed one of the two representatives of the Association on the council of the Smoke Abatement League for the remainder of the term for which the late Dr Pridley Bailey was elected the other representative is Dr Clark Trotter. Dr Hawthorne and Dr Lyndon were appointed representatives on the Joint Tuberculosis Council. Mr McAdam Eccles for three years on the Central Council for the Care of Cripples and Dr Matheson Mackay chairman of the East Yorkshire Division as representative of the Association on the governing body of University College Hull.

#### International Medical Organization

The Medical Secretary submitted a full and interesting report on the annual congress of the Association Professionnelle Internationale des Medecins held in Paris at the end of September which he attended as an observer. It appeared that the medical organizations of thirteen European countries were represented at the congress. The only two countries which have declined to join are Finland and Russia the latter for the reason that the other groups are not composed entirely of State medical servants. The work and scope of the international organization was discussed at the congress and in particular its relations with the International Labour Office.

The Chairman said that the practical issue which arose out of the report was the adherence or the non-adherence of the British Medical Association. One of the considerations which had helped to determine the Council's previous attitude towards this matter was the statement that the annual expenditure on quinquennial joining would be some £300 but it was now

stated by the Medical Secretary that the annual commitment would be no more than £125

Dr Wallace Henry asked whether, if the Association allied itself with this organization, it would be committed to the support of any scheme which was decided on by the congress from time to time. The Medical Secretary replied that the constitution resembled that of the League of Nations in this respect—that nothing could go forward which was not unanimous.

Dr Stirling said that the Council would agree that it must be beneficial to be associated with professional colleagues on the Continent, though in the exchange of experience it seemed likely that the profession in other countries would benefit rather than the profession in these islands. He did not wish to trespass on the prerogative of the Treasurer, but on reading the interesting and able report of the Medical Secretary he was struck by the remark that the expenditure to the Association, if it came in, would be £125 a year. This figure, however, was conditional upon the keeping down of expenses by an economical secretary. Other conditions might arise whereby the expenditure would be largely increased. The Council had a duty to the Association that money should be spent first for the benefit of the Association's membership and for the advancement of scientific knowledge.

An amendment by Dr Brucroft Anderson to refer the question to a committee of present and past officers was lost.

Sir Robert Bolam admitted that while, at first, he could not see the utility of this organization, later, and in part owing to the present report of the Medical Secretary, he had come to believe that the Council would act wisely in adhering to this international body. If, in time, it was found that the activities of the organization were not congenial it would be an easy matter for the Association to withdraw.

The Treasurer pointed out that while £125 per annum might seem a small sum, capitalized it was very considerable. There had also to be taken into account the travelling expenses of the Medical Secretary when attending these congresses, the additional clerical work thrown upon the office, possibly necessitating the appointment of another official, and the fact that all such bodies had a tendency to widen their sphere of operation and consequently to increase their expenditure. Moreover, once the Association was within the organization it would not be an easy matter to retire. No doubt the Association could help the international body by advice and information, but there was little that it could learn, for the medical organizations in many of the other countries were babies and sucklings compared with the British Medical Association. The Association might admit some missionary vocation, but it could not regard itself as living the world for its parish. He moved that the Finance Committee be first asked for its opinion with regard to the probable cost of the proposal.

Mr Turner, in seconding, said that for his own part he did not think that membership would be worth the expenditure. At such congresses there was, in his experience, a great deal of "fiat" and nothing was done.

It was agreed to refer the matter to the Finance Committee.

#### *Proposed Appointment of Whole-time Officer for Public Health and Poor Law Work in Rural District*

A long discussion took place on a report by the Medical Secretary upon a proposed appointment combining, in a whole-time post, the offices of medical officer of health and Poor Law medical officer and public vaccinator in a rural district. It appeared that in the past the Godstone (Surrey) guardians had employed a part-time practitioner as district medical officer and for the work of the Poor Law institution, the same medical man was also part-time medical officer of health to the rural district council, and was in private practice. On his recent retirement the authorities decided that the time was opportune to rearrange the duties and obtain a whole-time medical officer of health who should combine the health work and the Poor Law work. When the advertisement of the appointment was offered, the Medical Secretary wrote to the clerk of the guardians pointing out that the new appointment constituted a departure from the almost universal custom by which domiciliary Poor Law work was done by part-time practitioners. In a few large urban areas whole-time officers had been appointed to do the Poor Law (including domiciliary) work but the introduction of such a system into a country area appeared to be entirely

unknown. The advertisement was not accepted for the JOURNAL. A deputation from the Reigate Division met the local authorities, who, however, adhered to their decision.

The Chairman said that on this matter an appeal was made to the Council for guidance, and the Council might consider whether the principle involved was such as to warrant the insertion of an Important Notice.

Dr Snell said that he held no brief for the appointment by local authorities of whole-time men, but he thought it rather a Rip Van Winkle sort of attitude for the British Medical Association to discuss such a matter at this late day. There was nothing incompatible between the work of a medical officer of health and a Poor Law medical officer. The Birmingham board of guardians thirty years ago created whole-time district medical officers, and to-day there were many scores of medical men who combined the post of district Poor Law officer with that of medical officer of health. The only difference between these cases and the Godstone case was that these other men were also in private practice. If at Godstone the terms of the appointment had been such as to allow the officer to do private practice in addition probably not a word would have been said.

Dr Morton Mackenzie, who was spokesman for the deputation which met the authorities, pointed out the peculiar difficulties of members of the Division if such an appointment were made, and said that they were very anxious for some guidance.

Dr Christine Muirell thought that the grounds on which the Council proceeded, supposing it frowned upon the appointment should be very clearly stated. Was the objection on the ground that the man appointed was not to do private practice as well, or was it that the combination of offices was undesirable?

Dr Lyndon, who, as chairman of the Ethical Committee, had agreed to an "Important Notice" (which had not yet, however, been issued), pointed out that while in urban areas whole-time officers had been appointed to do the Poor Law (including domiciliary) work, this was something entirely new in rural areas. That was one ground of objection. It was another inroad upon the privileges of general practitioners in holding such part-time appointments.

Dr Hudson said this was a new encroachment on the domain of private practice, and Dr Thomas favoured the insertion of an Important Notice.

Sir Robert Bolam said that the situation was admittedly very difficult, but he did not see how an Important Notice could be justified. A local authority was making a new departure which was against the prevailing practice of the country. Whether a principle was at stake on which the Council should make a declaration was a matter to be considered, but he could not see at the moment that, because an authority in a rural area was doing the kind of thing which had not really been objected to in other areas of a different character, it was ground for the issue of an Important Notice. He suggested that the Medico-Political and Public Health Committees should get together and consider the point. Certainly the advertisement should be refused pending such consideration, but the insertion of an Important Notice was a different thing, and ought not to be the result of a "snap" decision. At the same time, the Council generally would feel that this was another encroachment upon private practice.

Dr Douglas did not think that what was proposed to be done by this local authority was at all a new departure, it would be more correct to describe it as a retrograde step. It was by no means a new idea for the offices of medical officer of health and Poor Law medical officer to be combined. Only as the duties of medical officer of health became more difficult and specialized was it realized to be not a good thing for the two offices to be held in that manner.

Dr Dain thought the Council might rightly consider this proposed appointment a retrograde step for the reason that the medical officer of health tended to become an administrative officer, whereas the Poor Law officer was required to be a practitioner treating patients. It was not in the interests of such patients that their treatment should be in the hands of an individual whose training and experience had been mainly in the administrative field. Where these posts had been held by someone who was also in private practice this difficulty obviously did not arise.

Dr Langdon Down thought that the main question should be considered by the Public Health Committee and perhaps by

the Medical Political Committee did. The intention of an Important Notice merely meant that any candidate being applied for a post was requested to communicate with the Medical Secretary or the Secretary for the Division and the reply that would be given in the present case would be simply that the matter was under consideration and that the principle had not been settled. Incidentally it would have the result that many men would not be disposed to apply for the post but it should be clearly understood that pending the decision of the Council after due consideration by the committee concerned, no further steps should be taken on the Important Notice. In this particular instance therefore it was in favour of referring it to the appropriate committee and informing in Important Notice.

Dr. Marcell pointed out that this would create a awkward position for a candidate. She thought the Council ought to legislate before sanctioning an Important Notice at this stage.

Dr. Wallace Henry said that in difficulty in supporting the Important Notice had been raised by the speech in its favour. It was said that what was proposed to God ten was no novel thing but on the contrary a retrograde step. How then could the chairman of the Ethical Committee and an on he ground that was a retrograde step. It was said that it was such an important question that the Ethical Committee must have been negligent in the past to allow it to be allowed in certain places. The whole matter ought to have been considered by some responsible committee before this position arose. If this was not a retrograde step he thought it was wrong to insert an Important Notice until the policy had been decided.

The Medical Secretary said that he had felt that it something was not done in this case the Council might be accused of the Annual Representative Meeting of permitting a further encroachment on the work of general practitioners. It was a new principle that a whole time medical officer of health should do, as a side-line, domiciliary Poor Law work.

Dr. Skill said that there was at least one in twelve where a whole time resident medical officer to a Poor Law institution was also medical officer of health of the district and did nothing else.

Dr. Morton Mackenzie again pointed out the difficult position in which local members of the Association were placed. Here it was proposed to bring into the area a medical man whose principal qualification was his knowledge and ability as an administrative officer but he would be required to undertake Poor Law duties consisting of medical supervision to the local hospital and institution and the work of public health inspector to a district of the union. He was required to live within two miles of the Poor Law institution he would have to see Poor Law patients at his house and would be in charge of the 120 inmates of the institution and 40 mental detainees. Incidentally the work hitherto done by a private practitioner would be swept away. The Poetgate Division felt it to be a serious inroad upon private practice.

Dr. Walker thought that the argument of Dr. Dain and Dr. Mackenzie gave good grounds on which quite properly in the interests of the patients themselves the Council could complain of such an appointment.

The Chairman in reply to a question as to the exact nature of an Important Notice, said that in his view there were no grade or degrees in Important Notices. If an Important Notice was issued anyone acting in contravention of that Notice subjected himself to the risk of ethical penalty.

Dr. Paterson thought that this was the kind of appointment to which all members of the Council might rightly object. There were all over the country public vaccinators and Poor Law officers who were also private practitioners. If such part time appointments were taken away it would be impossible for them in many cases to remain in practice in the area. He was perfectly certain that it would be the feeling of general practitioners in this case that an Important Notice should be put on.

Sir Richard Luce thought it a dangerous procedure to insert an Important Notice which would practically condemn any man taking up the appointment, when such notice was not based upon the infringement of any considered principle of the Association. The policy should first be definitely settled and then an Important Notice, if necessary, be inserted.

Dr. Morton Mackenzie moved and Dr. Walker seconded.

That the Council recognizing the correctness of the action taken by the chairman of the Ethical Committee in agreeing to inform that Notice confirm the refusal of the administration and authorize it to report of an Important Notice.

To this Sir Richard Luce moved in amendment which was seconded by Dr. Clute-Titter.

That the question be referred to the Medical Political and Public Health Committee and that no action be taken concerning an Important Notice be taken until after the report from those committees has been considered.

For the amendment thus voted in favour 18 Against 20. Dr. Mackenzie's original motion was then put and there voted in favour 23 Against 19. His motion was therefore carried. It was further agreed to submit the consideration of the general question—the Important Notice meanwhile being referred—to a joint meeting of the Medical Political and Public Health and Local Law Committee in consideration and report.

#### Amendment to Bill Christian Science Exemption

Dr. Bone moved as a matter of urgency the question of the report of the Government's acceptance of an amendment exempting Christian Science nursing homes from inspection under the Nursing Homes Bill. Dr. Bone reminded the Council that the Association had agreed not to oppose the bill but this point had arisen by the Government created a new situation. As the bill to do there were no exemptions but now it was proposed to exempt homes which should adopt and use the name of Christian Science nursing homes. It had been expected that the matter would come forward in the House of Commons the previous evening and after a hurried consultation at headquarters it was resolved to ask Sir Richard Luce to oppose the bill if this amendment were persisted in. Any notice of objection to the amendment would automatically cause the bill to be withdrawn. The bill however did not come on but it would be brought forward another day and he proposed accordingly that the Council should pass a resolution directing to any amendment of this kind, and declaring that if it was persisted in the further progress of the bill would be opposed also but this resolution be sent to the Minister of Health.

Dr. Wallace Henry seconded.

Dr. Buchanan hoped it would be made clear that the Council was opposing any exception whatever not merely this particular exception.

The resolution was carried unanimously.

#### Part of Committee

The Council had before it reports from seven committees several of these however were of a preliminary or interim character and concerned recommendations.

Sir Eben Mackenzie as chairman of the Committee on Causation of Puerperal Morbidity and Mortality reported that the committee already authorized to inquire into the causes of other bodies including the Ministry of Health the Medical Research Council the Royal Colleges and the Central Midwives Board would be held on January 11th when the general position in regard to the subject in this and other countries would be discussed.

Dr. Bone chairman of the International Medical Sea Code Committee reported that that committee had gone to work and had decided on certain lines of investigation and on certain authorities whose opinions it proposed to consult.

The Psycho Analysis Committee under Dr. Langdon Down had decided upon the form of a questionnaire which it had issued and could consider replies at the next meeting. One member of the committee Dr. H. Godwin Barnes had prepared for it an exposition of the Jung conception of psychological therapy.

The Private Practice Committee entrusted by the Council with the consideration of the resolutions of the last Annual Representative Meeting concerning the inroads upon private practice had held two meetings with Dr. Bone in the chair. All the whole time medical officers of health in England and Wales would be asked to supply the Association with a list of the health services undertaken by their authorities and the various conditions under which such services were given. The Medical Secretary had also been asked to make detailed investigations into the health services in certain representative areas—namely Durham Gloucestershire Birmingham Bradford Hants and Wiltshire. Mr. McAdam Eccles was elected a member of the committee.

*Finance and Building*

The principal matter brought forward by the Treasurer on the report of the Finance Committee was the establishment of a sinking fund for the redemption of the amount spent on the leasehold premises of the Association. The Council agreed that a sinking fund policy be taken out at an annual premium of £1,141 13s 4d in order to raise the sum of £100,000 at the end of forty years. Mr. Bishop Hume pointed out the advantages and disadvantages of such a policy, but in his view the money was in a sense locked up, it was not entirely beyond reach in the unlikely event of circumstances arising to compel the Association to liquidate its policy.

Several decisions were taken on the report of the Building Committee, presented by Sir Robert Bolam, relating to the property in Woburn Place, which has now come into the Association's possession under the terms of its ground lease from the Duke of Bedford's estate. The decisions related to the manner in which the work on the new buildings should be carried out, the cost of Messrs. Ford and Walton were appointed builders of the blocks in which building can be proceeded with at the present time. The vacated premises are now in course of demolition.

*Medical Charities*

Dr. Walker, in presenting the report of the Charities Committee, said that a sum of about £900 was standing to the credit of the trust fund for disposal. It included a donation of £350 from the Medical Insurance Agency, and a sum of more than £60, the proceeds of the collection at the official church service held in St. Giles's Cathedral, Edinburgh. The Council agreed to the allocation of the £900 to medical charities in the following proportions: Royal Medical Benevolent Fund, £400; Epsom College, £300; Royal Medical Benevolent Fund Guild, £150; Royal Medical Benevolent Society of Ireland, £30; and the surplus to the St. Charles Hastings Fund. In addition to these sums over £1,400 had been distributed to these various charities since January 1st, 1927. Dr. Walker said that the activities of the Divisions in respect to charity were increasing. It was proposed to ask each Division to report early next year what action it had taken during 1927. The organization of the work had been no easy matter, largely because there were already in existence in many local charities, or local branches of central charities, and to coordinate all the activities demanded the exercise of some patience. The economic situation was also reflected in the figures. When there was financial stringency, especially among the middle class population, medical men were the first to feel it, and the consequence was that then benefactions had to suffer.

*Science Activities*

On the motion of the Chairman of the Science Committee, Mr. Scott, the Council decided to call a conference of medical representatives from the medical schools to consider with the committee certain objections which have been raised to the Association's scale of salaries, agreed to at the Representative Meeting, 1926, for non-professional medical teachers and laboratory workers. Several of the bodies concerned have represented that the remuneration set out could not be realized under the existing conditions of university finance also that there were in the academic line of work considerable other than monetary which did not obtain in other civil appointments or in private practice.

On a further recommendation of the Science Committee the Council agreed to grant a further sum of £100 to aid the prosecution of the scheme of investigation being carried out at Children's Hospital, which was the subject of a report in the *STANDARD* of December 10th (p. 223). With regard to the prize of 25 guineas offered by the retiring Solicitor to the Association Mr. W. E. Hempton, the Science Committee recommended that this should be awarded for the best essay or treatise on a study of personal experiences in the medical inspection and treatment of school children under the auspices of any elementary education authority.

Dr. Stirling congratulated the committee on its timely choice of subject. Dr. Buchanan thought the subject too wide, and likely to lead to essays so widely differing in matter as to render the task of the judges exceptionally difficult. Mr. Scott, however, pointed out that what was intended was a

personal study, and from that point of view essays would be comparable even if they dealt with lines of investigation so diverse as squint and orthopedics. The recommendation was agreed to.

*The Pathologists' Group*

Dr. Hawthorne reported on the question of the proposed formation of a Pathologists' Group in the Association—matter which was referred at the last meeting of Council to the Science and Organization Committees. The petition for the formation of such a group had been signed, he said, by thirty-six members of the Association, and it was obvious that so small a number could not be said to represent all the members of the Association who might be described as pathologists. Further, there was reason to believe that there were some pathologists, members of the Association, who did not wish to be included in such a group. Upon inquiry it became evident that those who wished this group to be formed were chiefly those engaged in some qualifying term. The terms "clinical pathologist," "consulting pathologist," and "pathological practitioner" were considered, and the committees were of opinion that the second was most acceptable. He therefore proposed that the formation of a Consulting Pathologists' Group be approved, such a group to be composed of members of the Association (not being members of the public health service) who were working in institutional or private health service engaged in examining and reporting on specimens for clinical purposes. Sir Robert Bolam thought that the term used should be "clinical pathologists," the word "clinical" being more descriptive. Dr. Bone was of the same opinion, and said that a "consulting pathologist" would suggest the same relation to an ordinary physician as a consulting physician bore to an ordinary physician. Sir Percy Bassett Smith also supported the term "clinical." Sir Percy Bassett Smith also wished the pathologists concerned to have the word "consulting" or some term other than "clinical." These members represented a large proportion of pathologists, and were increasing in numbers. They were men who were working, and with practitioners all the time. It was true that they might be called "clinical" because they came to the bedside, but equally they were consulted there, and so might be termed "consultants."

An amendment to substitute the word "clinical" was lost, and the recommendation was agreed to. Dr. Morton Mackenzie desired to raise a point on the general question of the formation of groups within the Association—namely, the position of a member of the Association who, while obviously falling into one of the group categories, did not wish to be a member of the group, and whether *ipso facto* he became a member.

The Chairman deprecated the raising of a discussion on that point at the present stage, but said that if any doubt or uncertainty arose in a particular case it would be possible to refer the matter to the appropriate committee, probably the Organization Committee.

*Legal Actions*

Dr. Hawthorne in the absence of Dr. Brackenbury, reported to the Council the result of the recent cases of the British Medical Association v. Pulton (*JOURNAL*, November 19th, p. 962) and of the British Medical Association v. 'Daily News,' Limited (*JOURNAL*, December 3rd, p. 1056). With regard to the latter action he said that the object of the Association was to vindicate its position and its honour, it did not desire monetary damages. It had therefore agreed to the offer by the *Star* newspaper to publish a disclaimer in the columns of that periodical but had insisted that such disclaimer be read in open court before one of His Majesty's judges. This action had plainly announced to the press and to all concerned that the British Medical Association was not to be libelled with impunity. By the settlement on the terms stated the Association had avoided the inconvenience and the dislocation to the work of the office which would have been occasioned by a lengthy action.

Mr. Turner drew attention to what he considered to be a libellous statement against the Association in the review of a

book published in the *Daily Star*. It was evident that the writer was confusing one again the British Medical Association with the General Medical Council. Dr Hawthorne said that a communication had been received from the *Daily Star* expressing its regret and offering to make any correction. It was left to the Legal Actions Committee to consider what action should be taken.

### Lunacy Fair. The Protection of Medical Men

Dr Langdon Down, chairman of the Committee on Lunacy and Mental Disorder, brought forward a recommendation with regard to the protection of certifying medical practitioners. He said that since this matter was considered by the Council several things had happened—the debate in the Representative Body, the judgement of Mr Justice McCordie in a recent case and the announcement that legislation was imminent. Although it was not perhaps strictly logical in considering the report of the Royal Commission to take this matter first yet as it was first in the reference by the Council to his committee, the committee had given this its more immediate attention. The committee came to the conclusion that it was inadvisable to press for the complete immunity of the doctor on the ground that he was giving evidence before a justice. Even if it could be shown as suggested by Mr Justice McCordie that the justice and not the doctor was responsible for the order it would still be open for the doctor to be attacked on the ground that he had been careless or had acted in bad faith. Again it was felt to be undesirable for the profession to rest its case on the responsibility of the justice in this matter when in other parts of the recommendations, it was sought to diminish the justice. No doubt any such proposal would be controversial and this would mean a hindrance to legislation. It was hoped to have this question of protection included in an early non-controversial measure, controversial matters being left to be dealt with later. Dr Langdon Down here told the Council in private or certain conversation which had taken place with members of the Board of Control. In the proposal now brought forward the suggestion that the justice should be required in his order to put his signature under a statement that due care had been observed by the doctor had been omitted. Another departure from the previous suggestions was that instead of a king for medical assessors it should be asked that the judges might take the evidence of independent expert medical practitioners in any proceedings against the certifying medical man. The recommendation of his committee was as follows:

That the following recommendation of the Royal Commission on Lunacy and Mental Disorder—

We recommend that for the more effective protection of medical men and others in the bona fide discharge of their duties under the Act (i.e. Lunacy Act 1890) Section 330 should be amended so as to provide that any such person shall not be liable to civil or criminal proceedings unless he has acted in bad faith or without reasonable care and

That any proceedings taken against such a person shall be stayed upon a summary application to the High Court or a Judge in Chambers unless the court or judge is satisfied that there is substantial ground for alleging that such act was done in bad faith or without reasonable care.

As regards adequate and reasonable protection to the certifying medical practitioner provided that the Judge in Chambers or the High Court hearing a summary application or the Court of Appeal shall take the evidence of independent expert medical practitioners appointed for the purpose by the Government.

He took it that the law in any case would insist on retaining the final decision in its own hands and would not place it in the hands of medical assessors. The Council had to determine whether it desired to stick to the original idea of laying the onus on the justice. That would be to render futile the inclusion of this provision in any measure which it was desired should be of a non-controversial character. On the other hand, if this recommendation were accepted he thought it could be claimed that in substance it was non-controversial. The desire to accord reasonable and adequate protection to the medical man was now very strong both in Parliament and among members of the public and he thought that such protection as could be obtained within reason satisfied the profession was likely soon to be accorded. He added that the committee had arrived at the above recommendation without dissent.

Dr Hawthorne said that he recognized that in the new situation created by the recommendation of the Royal Com-

mission the onus of proof would be upon the plaintiff and not upon the defendant and that if the profession was not content with that it would be regarded as throwing the ball now in preparation into a controversial shape. It was obvious that the official view was in favour of supplying merely the additional protection suggested by the Royal Commission. But he was bound to ask the Council how it had come about that circumstances were what they were. What was now put forward was the slightest and weakest measure of protection that had ever been envisaged by the committee. By a gradual process of dilution and attenuation the committee had passed from a robust measure of protection to the slight degree of protection afforded in the recommendation now before the Council. The first proposal was that the practitioner should have complete immunity when signing a certificate. Even in May last the committee passed a resolution that the Council should be advised to continue to press for this full measure of protection. But in June a report from this committee departed from that proposal and put forward certain others. In July, in the Representative Body, the recommendations were weakened again and now the outcome was merely the recommendation of the Royal Commission plus medical assessors or expert witnesses. Dr Hawthorne deplored the delay that had marked the proceedings of the committee and thought that the committee ought to have prepared a case for the profession even if in the end it was necessary to withdraw from the full claim at least the profession would have had a document to serve as a guide and an inspiration to the members of the Association.

Dr Langdon Down said that he did not think he would be wise in entering into controversy; he was content to let Dr Hawthorne's remarks stand.

Dr Bone desired to amend the motion so that it would read shall have the assistance of instead of shall take the evidence of and he was also anxious that should it be found that the inclusion of the profession on medical assessors or the like imperilled the bill as a non-controversial measure this addition should not be pressed.

Dr Langdon Down thought that some such words as shall take steps to secure would leave sufficient latitude.

The recommendation was agreed to by the Council, without dissent in the following form:

That as in the opinion of the Council the following recommendation of the Royal Commission on Lunacy and Mental Disorder [the recommendation for an amendment of Section 330 as quoted above] affords adequate and reasonable protection to the certifying medical practitioner provided that the Judge in Chambers or the High Court hearing a summary application or the Court of Appeal shall have the assistance of an independent expert medical practitioner who shall be selected from a panel of practitioners appointed for the purpose by the Government steps be taken to secure by consent that effect be given thereto in any legislation on the matter that may be introduced into Parliament.

The differences between this and the original resolution in which changes Dr Langdon Down concerned are apart from the recommendation at the end, the substitution of the words shall have the assistance of an independent expert medical practitioner for shall take the evidence of independent expert medical practitioners.

### Other Business

Dr Drum on the report of the Insurance Acts Committee, stated that at the committee was now negotiating with the Government the putting into actual regulations of the disciplinary machinery proposals with regard to which were agreed to at the recent Panel Conference.

Dr Goodbody, chairman of the Naval and Military Committee, stated that the Association had been invited to co-operate in the management and organization of the ninth International Congress of Military Medicine and Pharmacology to be held in London in 1929. The Council accepted the invitation and appointed Major General Sir Alfred Blenkinsop the Association's representative on the organizing committee of the congress.

It was also stated by Dr Goodbody that the Naval and Military Committee was making representations to the Admiralty with regard to promotion in the Royal Naval Medical Service.

On the report of the Dominions Committee presented by Dr Pater on it was recommended that the name of the committee should be made more descriptive of the scope of its work,

so that it shall become the Dominions, India, Colonies, and Dependencies Committee. The Council agreed to make this recommendation to the Representative Body.

The report of action taken by the Dominions Committee covered a wide field. Dr Paterson specially drew attention to the same position which had arisen in Ceylon, where a majority on a Government committee had reported in favour of Government assistance for the training of practitioners of indigenous systems of medicine. The Ceylon Branch had passed a strong resolution against this report, and the Dominions Committee was urging the Colonial Office not to approve action on the lines of the report.

The matter of free treatment at Bombay public hospitals had also been brought to the notice of the committee through the Bombay Branch, and the Branch had been informed by the committee that it was considered contrary to public policy and inequitable to private practitioners that patients whose economic position enabled them to meet the ordinary charges of private medical practice should be admitted to a public hospital without payment of fees.

Mr McAdam Eccles presented the report of the Hospitals Committee, which contained no recommendations but dealt, among other matters, with the new contributory scheme for hospital benefit in Birmingham, which was the subject of an article in the JOURNAL of October 22nd (p. 751). The committee had directed the attention of the local Branch and Division secretaries to the fact that, according to the provisions of this scheme, any and every contributor, irrespective of income, would be eligible to obtain benefit at hospitals, and that the medical staff would not receive any portion of the money received by the hospital in respect of contributors to the scheme. The local units of the Association had been urged to take the matter into immediate and earnest consideration, and the chairman of the committee and the Chairman of Council had also been asked to watch the position and to take such action as might be necessary.

The report of the Office Committee dealt with several domestic matters. One of these concerned the regulations as to the use of the members' lounge and the library at the Association's House. There is reason to believe that these are used by non-members, and therefore the Council instructed the Financial Secretary to make arrangements for persons present in those rooms to sign the Members' Book on request. It was agreed also that the lounge be in future known as the "Members' Common Room."

The Council rose at 6.30 p.m., after an eight hour sitting.

## British Medical Association.

### CURRENT NOTES

#### Some Committee Work at Headquarters

ON December 13th the Asylum Medical Officers' Subcommittee settled the terms of its report and recommendations on the question of the adoption of a revised scale of salaries for assistant asylum medical officers. The existing scale was adopted by the Annual Representative Meeting in 1915, and there are good grounds for the conclusion that revision is now overdue. The report will be considered by the Medico-Political Committee at its next meeting on January 18th. The Medical Officers of Public Schools Subcommittee met on December 16th to discuss questions arising in connexion with the adoption by the Annual Representative Meeting at Edinburgh of certain resolutions as to the medical service of public schools. The subcommittee will report in due course to the Medico-Political Committee.

#### Grievances of Assistants

From time to time the Medical Secretary receives complaints from medical men and women who have accepted assistantships in private practice and have found the conditions to be unsatisfactory, and it is often suggested that the Association ought to take action, such as by refusing advertisements from certain doctors who are alleged to have victimized their assistants. Except in cases where there has been deliberate fraud such action is not possible. The old adage *cautat emptor* must rule the situation. It is not only the duty of principals to treat the colleagues

they employ fairly, but it is equally the duty of the assistant to see that his (or her) rights and privileges are safeguarded by a proper agreement before the duties are entered upon. The most common complaint is in reference to promises to give a partnership after a certain length of time if the assistant has been satisfactory, and almost frequently the complaint is with reference to holidays and time off duty. Members of the Association who are contemplating taking assistantships should in all cases insist upon a written agreement in which these points and others of importance are clearly specified.

#### The Association's Collection of Autographs

During the past few months the British Medical Association has begun a collection of autographs, a project which was favoured by the kindness of Mr Munhead Little, who consented to put the collection in order. The collection is founded on a number of autographs presented to the Association through Mr Munhead Little by Miss P. M. Bennett (daughter of the late Sir James Risdon Bennett, at one time President of the Royal College of Physicians of London), and the Council would welcome the gift of autographs of (a) persons who have held high official positions in the Association, (b) celebrated medical men and women, and (c) lay persons in some way connected with the medical profession or medical affairs. The collection may be inspected by members of the Association on application to the librarian.

## Association Notices

### BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH, NUNEATON AND TAMWORTH DIVISION**—The following programme of meetings for 1928 has been arranged by the Nuneaton and Tamworth Division.

- Jan 11th Nuneaton General Hospital Clinical and Pathological Meeting, arranged by Dr Percy.
- Feb 8th Nuneaton General Hospital Mr C. A. Risdon Surgical Conditions of the Biliary Tract. Arrangements for the Annual Dinner.
- Mar 8th Tamworth General Hospital Dr F. B. Gillespie Subject to be announced later.
- April 18th Nuneaton General Hospital Dr C. F. Rudd Paper on an ophthalmic subject.

It is hoped to hold the annual dinner in May. The annual meeting of the Division will be held in Nuneaton in June or July. Cases or specimens may be shown at any of the ordinary meetings. If possible, previous notice should be given to the secretary.

**METROPOLITAN COUNTIES BRANCH, CITY DIVISION**—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road E., on Tuesday, January 3rd, 1928, at 9.30 p.m. Dr Philip Hamill will read a paper on *brucella*.

**METROPOLITAN COUNTIES BRANCH, FINCHLEY DIVISION**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, January 10th, 1928, at 8.45 p.m. Mr W. S. Peirson will read a paper.

**METROPOLITAN COUNTIES BRANCH, HAMPSTEAD DIVISION**—A meeting of the Hampstead Division will be held at the Hampstead General Hospital on Thursday, January 12th, 1928, at 8.30 p.m. Dr T. Izod Bennett will read a paper on the treatment of gastric ulcer.

**METROPOLITAN COUNTIES BRANCH, ST PANCRAS DIVISION**—A meeting of the St Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1 on Tuesday, January 10th, 1928, at 9 p.m. Sir Squire Sprigge will read a paper entitled "The middle years."

**MIDLAND BRANCH, HOLLAND DIVISION**—A meeting of the Holland Division will be held at Spalding on Friday, January 6th, 1928, at 3 p.m. Sir Humphry Polleston, Bt. Regius Professor of Physics in the University of Cambridge, will give a British Medical Association Lecture on the medical aspects of idiocy and imbecility.

**OXFORD AND READING BRANCH, OXFORD DIVISION**—The following programme of meetings has been arranged by the Oxford Division. They will be held in the Radcliffe Infirmary on Wednesdays at 2.30 p.m.

- Jan 25th Dr T. Izod Bennett Recent Advances in Pernicious Anaemia.
- Mar 28th Dr J. Stann White Some Recent Aspects of Bacterial Therapy (with Cinematograph).
- May 23rd Dr F. G. Chandler Bronchiectasis—Early Diagnosis and Treatment.
- June 27th Clinical Meeting.
- Oct 24th Sir C. J. Fentall Cheate H. C. B. Clinical Signs of Impaired Changes in the Breast.
- Nov 28th Annual Meeting.

An extra clinical meeting will be held at the Horton Infirmary, Banbury on Friday, April 20th, at 3 p.m.

**SURREY BRANCH, GUILDFORD DIVISION**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford on Thursday, January 5th, 1928, at 4 p.m. Sir J. E. Collier will give an address on "Where law and medicine meet." Tea served at 3.45 p.m.

## Meetings of Branches and Divisions

### METROPOLITAN COUNTIES BRANCH TOWN HAMLETS DIVISION

A clinical meeting was held at the East London Hospital for Children, Shadwell, L.I. on December 14th when about thirty members were present. The following were given by members of the staff: Mr. ACRO, Division of congenital dislocation of the hip; Mr. WYBURY, White, Division of dislocation of the pelvis with rupture of the pubic bone; a young man in the Dr. GEORGE BOWEN, Division of ophthalmic leucorrhoea and Galeses, splenically; Dr. COHEN, Division of Hodgkins disease and purpura rheumatica. A discussion followed in which the members participated.

On the motion of Dr. HATFIELD, the chairman of the Division a vote of thanks was accorded to the staff for the arrangements made.

### NORTH OF ENGLAND BRANCH NORTH NORTH IRELAND DIVISION

A meeting of the North Northern Ireland Division was held on November 23rd in the Infirmary, Brawkion, Telford, when Prof. or LOVELL GLENN (Edinburgh) delivered an address on the significance of heart murmurs. The address was of great interest and was much enjoyed by all present, and at the close Prof. or Gulland was heartily thanked. Tea was provided subsequently.

The annual dinner of the Division was held in the Plough Hotel, Alwark, on the evening of November 17th. The guests at the Division were Dr. John Clay of Newcastle and Dr. Frank Beaton of Alington. The toast of The British Medical Association was proposed by Dr. SCOTT and responded to by Dr. BEATON. Our Guest was proposed by Dr. BADDOCK and Dr. HUGH DCAIR of Morpeth replied. During the evening a musical programme was much enjoyed by all present and the whole evening was voted at the close to have been a great success.

### SUFFOLK BRANCH WEST SUFFOLK DIVISION

A series of post-graduate lectures and clinics was held during the autumn the course having been arranged with the assistance of the Fellowship of Medicine and the Committee of the West Suffolk General Hospital. Invitations were sent to all practitioners in the area whether members of the Association or not together with a programme of the course. The Saturday evening lecture was preceded by an informal dinner.

There are forty-nine men in active practice in the area. The average attendance at the lectures was twenty, and at the clinics fifteen. The course was much appreciated by those who attended and it is hoped to hold a similar one every spring and autumn.

### WILTSHIRE BRANCH TROUBIDGE DIVISION

The annual dinner of the Troubridge Division was held at the Angel Hotel, Chippenham, on November 23rd at which eighteen members and two guests were present.

The chair was taken by Dr. D. F. SPENCE, chairman in the absence of the chairman, Dr. CROLEY, through illness.

Mr. E. W. HAY GROVES gave an address on damage to bones and reputations which was greatly appreciated.

### YORKSHIRE BRANCH WAKEFIELD POTTEFRAT, AND CASTLEFORD DIVISION

A meeting of the Wakefield Pottefrat and Castleford Division was held at the Great Bull Restaurant, Wakefield, on December 8th when Dr. GIBSON was in the chair.

Mr. E. R. GIBSON, in an interesting address on fractures illustrated by a lantern demonstration dealt in detail with the care of the upper and lower limb, and emphasized the importance of reducing them within the first twenty-four hours after the injury, and in the majority of cases, of employing an anaesthetic and x-rays before and after reduction. He considered that splints should be dispensed with in three to four weeks in upper limb fracture, and in the case of the lower limbs in about eight weeks, many being started early and followed later by passive and active movement. Mr. Flint also dealt with the causes and treatment of delayed union in fractures.

Dr. GIBSON, BUTLER, GULLERTON, GREAVE, and HILL, all took part in the subsequent discussion. On the motion of Dr. SCHOLEFIELD a vote of thanks was accorded to the lecturer with acclamation.

## Correspondence

### Ophthalmic Clinics for Insured Persons

SIR—One of the correspondents in your issue of December 10th (p. 220) writes to say that if the approved societies have the best interests of their members at heart they will not be in favour of establishing ophthalmic clinics. Even ophthalmic surgeons will agree with this statement.

Approved societies can be divided into two classes—the good and the bad. From the insured person's point of view, and that of our own, it will be found that the good ones are those that have accepted the British Medical Association's scheme of ophthalmic benefit by private arrangement at the guinea fee. The bad societies have not taken advantage of the scheme, and placed no barrier as the cause to prevent doing so.

All societies should be able to afford the guinea fee per member. My grounds for this statement are:

1. The figures of National Health Insurance for England and Wales given by Mr. Neville Chamberlain in June 1926 show that the accumulated funds at the end of 1925 amounted to £113,000,000.

2. What one society has done should be done by all. For equal payments should give equal benefits in a national scheme.

3. At the last Government valuation the largest women's friendly society in the United Kingdom—the United Women's, originally formed in 1912—was found to possess a surplus of £239,255. This is proof that well-managed societies can afford the B.M.A. scheme, which this society has been giving to their members of twelve months standing for many years. Their other additional benefit is also second to none, and it must be remembered that many societies only give ophthalmic benefit after five years' membership.

We cannot compel the bad societies to give ophthalmic benefit, but we can encourage the good ones who are trying to improve their ways by accepting the scheme of ophthalmic benefit. The clinic system of ophthalmic benefit has been proposed by the poorer approved societies who are anxious to give their members the advantage of the services of ophthalmic surgeons. In this they are to be congratulated for it presents them with many of their members to the ophthalmic departments of hospitals where they are seen gratis by the surgeon. The National Insurance Benefit Society, representing some 2,000,000 insured persons in several different societies, have approached the British Medical Association because they do not find the present position satisfactory.

I think it that ophthalmic surgeons have no fault to find with the principle of the school clinic system of giving ophthalmic benefit to children. It is the case it is rather late to object to the same principle being applied to adults at the request of approved societies. I think all will agree that it is better than their flocking to hospitals or to opticians, which was the only alternative in the past for school children and now for adults in the poorer insurance societies.

Why should we refuse the societies offer provided the surgeon's capitation fee and terms of work are satisfactory? Medical men often forget that they are servants of the public. We cannot restrict as I have seen suggested, the number of cases applying for ophthalmic benefit. The approved societies are satisfied that the clinics will pay them, for they have had experience of them for the last five years.

If the insured public do not like the clinic system they have the remedy in their own hands. They can either join a society that has accepted the B.M.A. scheme or pay the difference between the capitation fee decided upon at the clinic and the guinea fee. At present this would be 14s. 6d., but the capitation fee now paid at the clinics has not the approval of the Ophthalmic Committee. The difference between the societies' figure and that of this committee is not great and one that will easily be settled to the mutual advantage of all concerned. The conditions of work to my mind are satisfactory. The present position of cases being forced to go to the opticians is wrong.

Surely the clinic system although not ideal is better for both patient and surgeon. The former will be seen with less delay in a clinic than at hospital, and the surgeon will be paid a fair fee for the work done. At present those who do not like the clinic scheme need not undertake the work. I remember that many of my colleagues who opposed the B.M.A. scheme are now strong supporters of it—I am, etc.

RICHARD BICKERTON,

A Member of the British Medical Association's Ophthalmic Committee.

Liverpool, Dec. 14th.

### Private Practice and the Public Medical Service

SIR—I have read with great interest Dr. Flemming's article on private practice and the public medical services, in the Supplement of December 10th.

It has occurred to me that the general practitioner could receive great help if the school medical officers records of children could be linked on to the panel practitioner. He would then receive valuable information on the child's medical record card. Doubtful cases of pulmonary tuberculosis or pharyngeal neoplasms would have a valuable check on them instead of being suddenly discovered at a late stage. I should be glad to know if this is possible—I am, etc.

New Malden, Surrey, Dec. 14th. NORMAN J. ENGLAND, M.B.

## THE BRITISH MEDICAL ASSOCIATION AND COLLECTIVE INVESTIGATION

### PART I—PAST EXPERIENCE

'One work—a work that is really appertains to the Association the work of collective action of the pull together of the profession I mean the work of cumulative observation or accumulated data—has been too little attempted or if attempted has been productive of too little result. I am aware that anything on a large scale of this kind is a serious undertaking, a gigantic enterprise and I feel it is the more to be worthy of this gigantic Association. It is perhaps the only work in which all or a large part of the members can really and fully participate and to which each can contribute his mite. To engage the members of the Association as participants in any division of such work would prove one of the most powerful inducements to the cultivation of observation and thought respecting the mass of fact which are passing now too often unheeded or unnoticed before their eyes and would tend more than any other thing to deepen their interest in the science of medicine and to impart the charm of wider vision to the daily routine of life. (Sir George Murray Humphreys in his Presidential Address to the Association at Cambridge, 1920)

From time to time with varying success, the British Medical Association has sought to enlist the co-operation of the profession at large or of some special group of practitioners in scientific work which may be described as that of collective investigation or research. Generally speaking the appeal has been made incidentally when the elucidation of some particular problem undertaken by the Association has required data not obtainable by ordinary means. But there has emerged upon occasion a demand especially insistent during the last few years for a more general application of the method of collective investigation. It has been felt that in the records of individual experience could these be obtained in sufficient quantity lies the solution of many problems of pathology and treatment and that general combination, intelligently directed to a common end, should be a source of power in the scientific no less than in the economic field of action. A scheme for collective investigation formulated by a special sub-committee of the Science Committee in response to this demand was approved by the Representative Body at Edinburgh this year, and two inquiries—one into the treatment of varicose ulceration and the other into after-effects of gastro-enterotomy have been set on foot this month. Of these inquiries full particulars will appear in the British Medical Journal next week. Meanwhile, some light may be thrown on the possibilities and limitations of the present scheme by a review of the experience of the Association in earlier undertakings of a similar nature. This review will be confined to inquiries conducted by the method of collective investigation indicated above, which must be distinguished from two methods in more general use and far more easily directed and controlled—namely, the joint conduct of inquiry by a committee of

experts and the undertaking of specified pieces of related research by individual workers, whether or not under the direction of a committee.

### INCIDENTAL INVESTIGATIONS

The following is a brief account of collective investigation carried out in the course of special inquiries undertaken by the Association.

The first of these inquiries in point of time was that known as the success. At the thirteenth Annual Meeting of the Association in 1882 Dr C. Hurdnield Jones in making some remarks on remedies and on the study of their action suggested that medical practitioners should collect information on subjects to be determined by the Council of the Association and as a result of his representations a committee was formed in August of that year to inquire into the action of medicines. Schedule of questions on selected subjects were issued but although the membership of the Association was then about 2,200 only 46 replies were received to the questions sent out. The committee was reappointed in 1885 but there is no record of any further activities on its part. It may however be considered as the forerunner of the Therapeutic Committee of the Association which carried out a considerable amount of valuable work between 1887 and 1904.

The Therapeutic Committee was instructed to obtain from the medical profession its opinion regarding the utility or the best method of using well known or established drugs. While it would seem that the major part of the work consisted of the collection of inquiry by individual under expert scientific direction the method of collective investigation proposed was used on occasion. In some cases general appeal were made in others a number of practitioners were specially appointed to investigate the various therapeutic questions and record their result in a prescribed manner. Information obtained in this way was passed to the Therapeutic Committee by Branch secretaries. As the collective investigation conducted by this committee were necessarily on a small scale the individual contributor were a relatively 'feet body'. A considerable amount of useful work was done in this way. The committee ceased to exist in 1904 but its successor appointed in 1905 with a very similar reference worked until reduced to the rank of a standing sub-committee of the Science Committee in 1910. In this form it existed until the appointment of a pharmacology in 1912 made it unnecessary to continue its reference. An investigation undertaken by the Therapeutic Committee in 1905 into ether compounds is an example of complete failure of the collective method. The committee reported in 1906 that a circular requesting clinical information as to the value of the several ether compounds had been sent to nearly 300 members of the profession but owing to the small number of replies received the committee was not in a position to report on the subject.

The very extensive work on anaesthetics accomplished by the Association between 1887 and 1911 included a successful application of the method of collective investigation in striking contrast to the failure just described. An Anaesthetics Committee appointed on the recommendation of the Section of Therapeutics at the Annual Meeting in 1891 instituted an inquiry which covered all

cases in which accurate notes could be obtained of the administration of anaesthetics in the United Kingdom during 1892. The committee sent to all who undertook to co-operate in the work record books containing columns for noting all the requisite details. Observers also received a paper to be filled in at the end of the year of inquiry with a summary of the cases noted, and a general statement as to individual opinion and practice in the administration of anaesthetics, 136 record books were returned recording details of 25,920 cases. Of the inquiry papers, however, only 94 were returned. Statements without details were received in connexion with 6147 cases. Possibly the discrepancy between the number of record books and the number of summary sheets returned was due to a premature issue of the latter and then consequent loss before the end of the year. Interim reports on the progress of the work appeared in the *British Medical Journal* annually from 1892 until 1899. In the following year the committee made its final report. This experiment met with a degree of success which was possibly due to the immediately practical interest of the subject of inquiry and the fact that it took its place in a series of investigations undertaken by the Association over a relatively extended period.

An example of a somewhat different method of collective investigation is offered by the work of a committee of twelve on the treatment of simple fractures appointed on the recommendation of the Section of Surgery at the Annual Meeting of 1910. Notices were published in the *British Medical Journal* and *Lancet* requesting communications from those interested and able to show cases. These notices were supplemented by direct communication with the staffs of general hospitals through the surgical registrars. The several hospitals were then allocated to the different members of the committee who inspected the cases presented by the local profession and also hospital and individual records. The greatest possible care was taken to secure the adoption of a uniform standard by the several members of the committee. The report of the committee, published in 1912, contained, in addition to the notes of these cases and the conclusions of the committee, several original communications from English and foreign surgeons. The success of the method adopted is indicated by a request received from the American Surgical Association for advice and assistance in setting up a similar committee.

In each of these inquiries the method of collective investigation was clearly adopted as one means of elucidating some particular problem with which the Association was occupied at the time. The most systematic and comprehensive experiment in collective investigation made by the Association was, however, carried out rather with the object of exploring the possibilities of that method of research than as one line of attack upon a problem already under consideration. It took the form of a number of inquiries directed between 1880 and 1889 by a special committee known as the Collective Investigation Committee.

#### THE COLLECTIVE INVESTIGATION COMMITTEE, 1881-1888

In his presidential address at Cambridge, in 1880, Sir George Murray Humphry made the statement quoted at the head of this review. To that challenge the President of Council, Mr. Husband, responded by moving "that the Committee of Council be requested to consider how such suggestions can best be carried into effect." The motion was carried, and a special Committee on Collective Investigation was appointed, and presented a report adopted unanimously by the Annual Meeting at Ryde in 1881. The machinery set up after much discussion included a central committee, local committees, a body providing liaison between the central and local committees, and a secretary acting under the direction of the central committee. The central Collective Investigation Committee consisted of seven members appointed annually at the Michaelmas meeting of the Committee of Council "to arrange, superintend, and direct the work of combined observation." The local committees were formed in the Branches with the object of securing full local discussion on each subject of observation, and adequate co-operation in the conduct of the research. Fifty-four of these committees were actually appointed at an early date, with a membership of between 800 and 1,000. Their activities were not confined to the promotion of research undertaken centrally or the suggestion of further subjects for investigation, for in some cases local collective investigations were carried out under their auspices—for example, an inquiry into syphilis and its effects upon the civil population of various districts, undertaken by the East Anglian Branch, and an inquiry into diphtheria by the Thames Valley Branch. Inquiry forms

to be completed in connexion with the various subjects were distributed by these local committees.

Representatives of the local committees met the central body at the sessions of the joint committee, a plan which secured the maintenance of full liaison throughout the work. The services of the secretaries were invaluable, not only for the central secretarial work, the collation of records, and formulation of reports, but also for local meetings at which the nature and objects of the inquiries to be undertaken were reviewed. The work was done in part on an honorary basis, but it was later found necessary to retain the services of a paid official.

The first Collective Investigation Committee included three members of the Association who had been most active in promoting the project—Professor Humphry, Dr. W. R. Smith of Cheltenham, and Dr. Ransom. Dr. W. R. Smith of Cheltenham, the first nominee for the secretarial post, declined the office, and Dr. Mahomed was succeeded first by Dr. (afterwards Sir) Wilmot Heringham, and later by Dr. (afterwards Sir) Isambard Owen.

The several inquiries were initiated by the publication in the *BRITISH MEDICAL JOURNAL* of memorandums, specially drawn up by experts in the chosen subjects, indicating the limits of the knowledge already available in connexion with each problem and the particular questions on which it was hoped to throw some light by the method of collective inquiry. Cards of questions on each subject were then issued to individual practitioners, in some cases the secretaries or registrars of the local committees. The several inquiries were kept open for relatively long periods, during which in some cases interim reports or additional memorandums on the subjects were issued with a view to stimulating further interest. The form of the final report varied, but in every case the replies received were carefully collated and tabulated, and the results of this tabulation published, together with the report of which they formed the basis. In some cases the actual replies or précis of the replies were also published.

The reports appeared in the first instance in the *JOURNAL*, but a number were subsequently published in four separate volumes, which included not only the material already indicated, several papers and addresses on the subject of the collective investigation, and general reports from the Central Investigation Committee, but also the forms of inquiry and a number of original communications connected with the subjects of the special reports. The first of these volumes appeared in 1883 and the last in 1888.

Volume I contained a report on an inquiry into communicability of phthisis, based on 1,078 reports received by the committee on this subject. The general opinion as to its value may be indicated by an extract from a Lumleian Lecture by Dr. Andrew, in which it is described as offering "the largest collection (then available) of observations upon the communicability of phthisis amongst men, and by far the most important, inasmuch as it includes communications from men of large experience and of every shade of opinion." Many other complimentary references appeared in the contemporary medical press. This volume contained also preliminary reports on pneumonia, chorea, acute rheumatism, and diphtheria, each of which in the opinion of the committee "distinctly advanced the knowledge of the day in connexion with the subject under inquiry."

The chief contents of Volume 2 were a report on pneumonia, based on reports of 1,065 cases, and a preliminary report on some 400 cases of puerperal pyrexia.

Volume 3 included a review of 439 cases of chorea reported to the committee between April, 1882, and October, 1885, it that date "probably the largest number of original cases ever subjected to careful and detailed examination," a report on cancer of the breast, based on 210 returns made by 111 observers during 1885 and 1886, together with a large number of letters upon the subject of inquiry, and a collection of preliminary reports upon the general subject of old age, covering its incidental changes, its reports upon centenarians, and a report upon a number of post-mortem examinations of centenarians, based on returns received between May, 1884, and December, 1885.

The success of the inquiries on old age and emeer of the list was mainly due to the personal exertions of Professor Humphry and Sir Henry Bustin.

The last volume contains the final reports upon 655 cases of acute rheumatism, collected between April 22nd 1882, and June, 1886, upon the maladies of old age and the present condition habits and circumstances of aged persons, and upon the connexion of disease with habits of temperance. This list was based upon 2500 schedules covering more than 4234 cases returned by 178 contributors.

No further volumes of the record were issued after 1888 but a report on the cause of death amongst gouty men based on 2,852 returns and a report on the geographical distribution of various diseases were published in the JOURNAL early in 1889. The history of the latter is of interest. Sir William Gull, at the request of the Collective Investigation Committee brought the subject of international collective investigation before the Medical Congress at Copenhagen and a general meeting of the congress was devoted to its consideration. The scheme for this inquiry was subsequently drawn up by the International Committee of that Congress in 1884 presumably as the outcome of the deliberations thus initiated by the Association. Reports were prepared in Sweden, Norway, Denmark and America and presented at the meeting of the congress at Washington in 1887. In this country the inquiry papers were issued by the Association to its members and also at the personal cost of Professor Humphry to the remaining members of the profession. The report and maps compiled as a result of this inquiry were based upon 3000 returns.

The response to the inquiries issued though enthusiastic at first seems to have diminished gradually until it became so poor that the committee was unable to recommend any further extension of its activities. The abandonment of the work in October, 1889 was fore-shadowed in a speech made by Dr Carpenter in moving the report of the Collective Investigation Committee at Chicago in 1888. Dr Carpenter said his position was rather uncomfortable since the report would probably be the last presented by the committee to the Association. The fact was that they had been too ambitious seeking to cover too large an area and to obtain too much information at a time when members of the Association were not likely to adopt the suggestions made by the committee. They had however, done a full work but the time had come in the opinion of the Council when they ought to draw in their horns in regard to further allowances. As an illustration of the value of the committee's work he might refer to Dr Lombard Owen's observations on the effects of intemperance on life which had been suddenly taken up by the outside world and references had been drawn which were not borne out by those observations. That showed how the work of the committee would have developed if the opportunity had been afforded.

Consideration of the experience of the Collective Investigation Committee during the nine years of its work shows that whatever its ultimate success it was undertaken under the most favourable auspice. The Association financed its work on a generous scale actually spending over £6000 on the work of investigation and of publication of results at a time when its total annual income ranged roughly from £16000 to £31000. The whole scheme was developed in response to a real demand from all sections of the profession. It was undertaken at a time when the individual practitioner was far less burdened with clerical reports and certificates than he is at the present day and when the possibilities of medical statistics had been far less fully explored than is now the case. The enthusiasm for the experiment is evidenced by the number of local committees formed and the scope of their activities on the one hand and on the other by the large number of individuals who co-operated in the work. The detailed returns received in connexion with all the inquiries undertaken were no fewer than 8253 contributed by 6403 individuals and this during a period at the opening of which the total membership of the Association was little over 5000. Expert assistance was secured and required in the several July cases dealt with. The difficulties as well as the possibilities of such a scheme seem to have been very

fully appreciated and the addresses delivered on the subject of collective investigation might well (apart from references to current theories and methods of treatment) have been written during the last few weeks.

The reports actually issued received at the time very favourable comment and although the circulation of the record does not seem to have been very extensive, it must be remembered that the majority of the reports which it contained had already been published in the JOURNAL. In the face of all this it seems a little difficult to account for the gradual collapse of the movement. Possibly this was due to an overloading of machinery by the issue of so many inquiries during the same period and the policy of keeping a given inquiry open for so extended a term. This may well have tended to dissipation of energy and loss of the keener interest which might have been secured by a simultaneous concentration of all available energies upon a given subject for a shorter period. It is true, of course that the shorter the period the more restricted would be the series of reports which might be expected but in this connexion it may be pointed out that the inquiries were so drawn as to cover not only observations made during the course of the investigation but also records collected by any given individual at an earlier date.

[Part II will give particulars of the new venture in collective research now being undertaken by the British Medical Association.]

## British Medical Association

### CURRENT NOTES

#### The B.M.A. Charities Fund

Dr D. D. FRY, the honorary secretary of the South Eastern Division has forwarded the following contributions to the British Medical Association Charities Fund as additions to the list which was published in the SUPPLEMENT of October 15th, 1927.

	£	s	d
Dr G. Wilson (Weitch-on-Sea)	1	1	0
Dr C. H. T. Stovin (Weitch-on-Sea)	1	1	0
Dr V. J. Hodgson (Weitch-on-Sea)	1	1	0

#### Staff Annual Luncheon

The annual Christmas luncheon of the staff of the British Medical Association was held in the staff luncheon room at Tavistock Square on December 22nd when Mr Treasurer, chairman of the Staff Committee presided. The chairman having read letters from Sir Dawson Williams (Editor) and Mr L. F. F. Scott (Financial Secretary and Business Manager) regretting their absence conveyed the thanks of the staff to the officials whom they had the honour to entertain as guest and tendered the deep sympathy of all to Dr Alfred Cox in his recent bereavement. Dr Cox thanked the staff for their kind thought in inviting the officials to their annual luncheon. He believed that the staff of the British Medical Association was as happy a family as could be found in London and this was partly because the Council of the Association always endeavoured to make the staff comfortable in appreciation of the splendid work they did. Dr Cox then referred to the coming retirement of Sir Dawson Williams after nearly half a century's service with the Association for the last thirty years of which he had been Editor of the BRITISH MEDICAL JOURNAL. He spoke of the sincere character of Sir Dawson Williams of the great work he had done for the Association and the high esteem in which he was held by the journalistic profession of this country and by the medical press of the world. He suggested that the Staff Committee should send on behalf of the staff a message to Sir Dawson Williams hoping that his health would soon improve and regretting that his long and most distinguished connexion with the British Medical Association was coming to an end. Dr Cox concluded by thanking the staff for their sympathy in his retirement and Dr N. C. Horner joined with Dr Cox in expressing appreciation of the generous hospitality of the staff and in acknowledging the high standard of their work and their unflinching loyalty. Dr G. C. Anderson also endorsed very warmly what had been said of the staff. He

considered it was a happy thought that prompted such an annual gathering and hoped the custom would continue in order to give an opportunity for them to meet as a whole at least once in the year

## Association Notices.

### BRANCH AND DIVISION MEETINGS TO BE HELD

**BIRMINGHAM BRANCH NUNEATON AND TAMWORTH DIVISION**—A clinical and pathological meeting of the Nuneaton and Tamworth Division, arranged by Dr Price, will be held at the Nuneaton General Hospital on Wednesday, January 11th, 1928

**BORDER COUNTIES BRANCH ENGLISH DIVISION**—A meeting of the English Division will be held at Marport on Friday, January 27th, 1928. Dr J. N. Douglas Smith will read a paper on the early treatment of puerperal sepsis

**ESSEX BRANCH SOUTH ESSEX DIVISION**—The following meetings of the South Essex Division have been arranged

Jan 10th Address by Mr E. C. Hughes on Surgical Mistakes  
Feb 14th Dr A. S. Woodwill  
Mar 13th Medico Legal Meeting

**GLASGOW AND WEST OF SCOTLAND BRANCH LANCASHIRE DIVISION**—A meeting of the Lancashire Division will be held at St. Andrew Station Hotel on Wednesday, January 11th, 1928, at 3.30 p.m. Dr Douglas Guthrie (Edinburgh) will read a paper on the septic tonsil and discharging ear, with lantern illustrations

**LANCASHIRE AND CHESHIRE BRANCH HYDE DIVISION**—A clinical meeting of the Hyde Division will be held in the Maternity and Child Welfare Centre, Hyde, on Thursday, January 26th, 1928, at 8.30 p.m.

**METROPOLITAN COUNTIES BRANCH CITY DIVISION**—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, January 3rd, 1928, at 9.30 p.m. Dr Philip Hamill will read a paper on bacilluria

**METROPOLITAN COUNTIES BRANCH TYNCHLEY DIVISION**—A meeting of the Tynchley Division will be held at the Tynchley Memorial Hospital on Tuesday, January 10th, 1928, at 8.45 p.m. Mr W. S. Peillon will read a paper

**METROPOLITAN COUNTIES BRANCH HAMPSTEAD DIVISION**—A meeting of the Hampstead Division will be held at the Hampstead General Hospital on Thursday, January 12th, 1928, at 8.30 p.m. Dr T. Izod Bennett will read a paper on the treatment of gastric ulcer

**METROPOLITAN COUNTIES BRANCH LAMBETH AND SOUTHWARK DIVISION**—A meeting of the Lambeth and Southwark Division will be held at the Lambeth Carlton Club, Coldharbour Lane, S.W.9, on Wednesday, January 25th, 1928, when Dr A. G. G. Thompson, the newly appointed medical officer of health for Lambeth, will read a paper on the Schick test

**METROPOLITAN COUNTIES BRANCH LEWISHAM DIVISION**—A clinical evening arranged by the Lewisham Division will be held at the South Eastern Children's Hospital, Sydenham, on Tuesday, January 17th, 1928

**METROPOLITAN COUNTIES BRANCH NORTH MIDDLESEX DIVISION**—At the meeting of the North Middlesex Division to be held on Wednesday, January 25th, 1928, Mr T. H. C. Beuans will read a paper on local immunization and antiviral therapy

**METROPOLITAN COUNTIES BRANCH ST PANCRA'S DIVISION**—A meeting of the St Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, January 10th, 1928, at 9 p.m. Sir Squire Sprigge will read a paper entitled "The middle years"

**MIDLAND BRANCH CHESTERFIELD DIVISION**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, January 13th, 1928, at 8.15 p.m. Mr W. W. King will read a paper on dysentery—its cause and its symptom

**MIDLAND BRANCH HOLLAND DIVISION**—A meeting of the Holland Division will be held at Spalding on Friday, January 6th, 1928, at 3 p.m. Sir Humphry Rolleston, Bt, Regius Professor of Physic in the University of Cambridge will give a British Medical Association Lecture on the medical aspects of idiocynerasies

**NORTH OF ENGLAND BRANCH BISHOP AUCKLAND DIVISION**—A meeting of the Bishop Auckland Division will be held at the Cottage Hospital, Bishop Auckland on Friday, January 27th, 1928, at 8 p.m. Dr J. C. Spence will give a lecture on medical emergencies in children

**NORTH OF ENGLAND BRANCH TYNESIDE DIVISION**—The Tyneside Division has arranged to hold a dinner on January 13th, 1928. Sir Robert Bolam has promised to attend and the member of Parliament for Tyneside, Major West Russell has been invited

**OXFORD AND READING BRANCH OXFORD DIVISION**—A meeting of the Oxford Division will be held in the Radcliffe Infirmary on Wednesday, January 25th, 1928, at 2.30 p.m. Dr T. Izod Bennett will lecture on recent advances in pneumonia

**SOUTHERN BRANCH PORTSMOUTH DIVISION**—The annual dinner arranged by the Portsmouth Division in aid of medical charities will be held at the Savoy Cafe on Tuesday, January 10th, 1928

**SURREY BRANCH CROYDON DIVISION**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, January 11th, 1928, when Dr G. Lewin will give a lantern demonstration on Bazin's disease. The meeting will be preceded by tea at 4 p.m.

**SURREY BRANCH GUILDFORD DIVISION**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, January 5th, 1928, at 4 o'clock. Sir John Collic will give an address on "What law and medicine meet". Tea served at 3.45 p.m.

**YORKSHIRE BRANCH DEWSBURY DIVISION**—A meeting of the Dewsbury Division will be held at the Batley Hospital on Friday, January 13th, 1928. Mr L. R. Braithwaite (Leeds) will read a paper on chronic pyrosis in the night. Tea at 6.45

**YORKSHIRE BRANCH WAKEFIELD, PONTEFRAC T AND CASTLEFORD DIVISION**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Great Bull Restaurant, Westgate, Wakefield on Thursday, January 12th, 1928. Dr G. B. Hillman will give a lecture on the insurance practitioner and some of his relationships. Supper (2s. 6d.) at 7.45 p.m., will precede the lecture

## Meetings of Branches and Divisions

**BIRMINGHAM BRANCH NUNEATON AND TAMWORTH DIVISION**—A meeting of the Nuneaton and Tamworth Division was held at Nuneaton General Hospital on December 14th

Dr J. Chalmers of Tamworth was unanimously elected joint honorary secretary, vice Dr J. Cyriax (resigned on leaving the area)

Dr JAMES T. BRIDFORD of Birmingham read a paper on the radiology of the alimentary canal, illustrated by a large number of very excellent lantern slides. He emphasized the great importance of a preliminary general screening before proceeding to the examination by barium meal of the part suspected. He instanced cases where such lesions as multiple tubercle of the lungs, gall stones, renal stones, Paget's disease, cancer, and carcinoma of the spine and aneurysm had been so discovered when lesions of stomach, appendix, or intestine had been suspected from clinical examination, and where patients had been sent for x-ray examination of these organs. About 30 per cent of gall stones could be seen by ordinary screening and a very large proportion of the remaining 70 per cent could be demonstrated by modern methods of cholecystography when the iodine salt was used there was no reaction whatever in 80 per cent of cases. Dr Bridford then dealt with the radiology of the trachea, oesophagus, stomach, appendix, and small and large intestine, and showed illustrative slides

A discussion followed in which Drs PRACY DUBLEY, and JONES took part. On the motion of the Chairman, seconded by Dr I. N. NASO, a very hearty vote of thanks was recorded to Dr Bridford for his valuable paper and demonstration

Prior to this meeting medical practitioners in North Warwickshire made a presentation to Dr R. J. Cyriax, the tuberculous medical officer, on his leaving the area. Dr E. N. NASO occupied the chair, and expressed the regret of practitioners in the area at the departure of Dr Cyriax. Dr L. E. PRICE referred to the constant tact and unflinching courtesy shown by Dr Cyriax during his seven and a half years in the area. He said that it all public health medical officers did their work in a similar way there would be no chance of friction between them and the general practitioners. He thought that the feeling between the public health officer and the practitioner was improving, and that it was men like Dr Cyriax who helped so much towards this spirit of mutual understanding and co-operation. On behalf of the medical practitioners in the area he presented Dr Cyriax with a silver cigarette case suitably inscribed, and a cheque

Dr CYRIAX replied in a characteristically modest speech

**DOVELET AND WEST HANTS BRANCH WEST DORSET DIVISION**—A meeting of the West Dorset Division took place at the Yeatman Hospital, Sherborne, on December 14th. In the absence of Dr REES Dr UYENH presided

Dr J. WHITTINGHALE showed two cases: (a) A man of 50 with epithelioma of the hard palate. Dr Douglas Harner had performed a wide removal of the original growth by diathermy. Metastases had occurred in the superior deep cervical glands, which were being treated by the implantation of radium needles. The patient now had facial palsy and lancinating pains due to infiltration of the trigemino-temporal nerve and branches of the cervical plexus. So relief of the pain had been obtained by infiltration with quinine and mercuric iodide. (b) A woman of 52. In 1924 she suffered from acute appendicitis and had her appendix removed. At the operation a large mass was found in the pyloric end of the stomach, many enlarged and hard lymph glands along both curvatures, plaques of growth diffused over intestines, free fluid in the greater sac, and a hydronephrotic left kidney. The patient was now alive and well and free from any symptoms

Dr H. H. WOYLE showed two cases: (a) A lad of 15 presenting Frohlich's syndrome, dystrophia adiposogenitalis associated with interference of the function of the posterior lobe of the pituitary gland. The onset was in 1919 with epileptiform fits. In 1921 severe frontal headaches began. In the following year the patient had measles, followed by acute rheumatism. The obesity had gradually developed since then and the patient's weight was now 15 st 2 lb with a chest measurement of 38 in. His condition was gradually improving, he had some pubic hair and the testis were developing. (b) A woman of 30 who, on June 2nd last, had a fibrile attack similar to influenza, with frontal headache and temperature between 100° and 102°, spleen enlarged and level with the umbilicus, both kidneys movable, no albumin or

sugar in urine. On June 6th the spleen was larger, the urine contained many motile bacilli but no pus or blood. On June 13th blood films showed polymorphs 15 per cent, lymphocytes 82 per cent, large mononuclears 4 per cent, and myelocyte granules 1 per cent. Considerable anisocytosis and poikilocytosis were present, no nucleated red cells, blood platelets numerous. By August the patient was much improved, but the spleen was still enlarged. In November she had the same symptoms as in her initial attack. Temperature 102° to 103° F. for several days and raised for fourteen days. Spleen again enlarged. The diagnosis suggested was lymphoid leukaemia.

The cases were discussed and in regard to the last alternative diagnosis of malaria and paratyphoid fever were suggested.

Dr. Gerard Pearce read a paper entitled 'The problem of the neonatal abdominal case.' This dealt exhaustively with the subject, was supported by numerous references and relayed by many witty quotations. Many took part in the subsequent discussion and congratulated Dr. Gerard Pearce on the excellence of his paper.

At the close of the meeting tea was served by the kindness of the medical staff.

#### ESSEX BRANCH SOUTH EAST DIVISION

The annual general meeting of the South East Division was held at the Queens Hotel, Westcliff, on October 18th. Dr. J. H. (Ravleigh) occupied the chair, supported by a very large attendance. The following officers were elected for the coming year:

President Dr. H. C. Ellis, Vice-President Dr. W. F. Adams, Treasurer Dr. R. H. Norman, Secretary Mr. D. D. E. A. J.

Another meeting of the Division was held at the Queens Hotel, Westcliff, on November 6th. There was a very large gathering to welcome Dr. J. F. Walker, who gave a short interesting address on the different side lines of general practice. At the termination of the lecture the Division, through Dr. W. F. Adams, gave Dr. Walker a handsome caution of their deep appreciation of his valuable services to the Division as their secretary for a period of six months.

#### GLoucester HIRE BRANCH

The opening meeting of the Gloucester Hire Branch was held at the General Hospital, Cheltenham, on November 10th. Dr. J. R. Carter, Colwyn, presided and there were fifty-six members present.

Dr. Collier, after expressing the pleasure and profit his year of office had brought him, called on the president for the year, Dr. C. L. Coode, to deliver his presidential address.

Mr. Coode, who was received with acclamation, took as his subject 'A series of cases of gastric ulcer occurring in a small hospital. In all there were 101 cases, under in personal charge all of which showed at least two of the three cardinal symptoms: (1) Epigastric pain having a definite relation to the ingestion of food; (2) Vomiting of or after food; (3) Haemorrhage—that is, haematemesis or melæna. Cases of duodenal ulcer were included as in Mr. Coode's opinion these were in the acute stage indistinguishable from gastric cases. In the series there were 54 men and 47 women. Dealing first with the women's group the ages varied from 18 years to 72 years, the average being 32. This group was divided into two classes according to age: (1) 30 years and under—comprising 27 cases. All had symptoms (1) and (2), and two-thirds also had symptom (3). They all belonged to the anaemic, errant girl class. This type of case is rapidly disappearing. In this group there were 3 perforations all operated on, with 1 death. (2) Over 30 years—20 cases. In this group were 2 perforations, 6 operated on, and 1 death. 2 others died of haemorrhage. So that among the women there were 47 cases with 4 deaths. There were 54 cases among men. Of the 20 perforated, 14 being gastric ulcers and 6 duodenal. All were operated on, and 7 died. 2 others died from haemorrhage, 1 from tubercular abscess, and 1 from bronchitis. Among the men, therefore, there were 54 cases and 11 deaths. Two cases were connected with cancer of the stomach, one proved to be so at the time of operation and the other operated on at the age of 69, dying seven years later with symptoms pointing to malignant disease.

Mr. Coode gave interesting details of a number of the cases, and in discussing surgical treatment recorded his opinion that gastro-enterostomy should be done at the same time as closure of the perforation if at all possible, as it might save years of most acute discomfort and did not appear to add much of a load to the immediate chance of recovery. He concluded with a few remarks on the present position and immediate outlook of the general practitioner, his general idea being that unless the position were otherwise, the general practitioner would find himself ousted from his rightful place before he realized it.

On the motion of Mr. Campbell, seconded by Sir Harry Water, a vote of thanks to Mr. Coode for his address was carried by acclamation. Subsequently forty-six members had supper at the Cadena Cafe.

#### METROPOLITAN COUNTIES BRANCH SOUTH WEST DIVISION

A very successful reception and dance in aid of the P. M. A. Charities Fund was held in Leyton Town Hall on November 24th. Over one hundred and thirty guests were present, including the deputy mayor (Mr. Man Bulgin) and the late mayor (Sir James Stale). As a result the sum of £202.6d has been handed over to the Charities Secretary.

A meeting of the South West Essex Division was held in Livingstone College, on December 6th, when Dr. D. M. McKelvey gave a most interesting lecture illustrated by lantern slides on 'Unfounded ways in medical history.' He indicated the debt of medicine to folklore and the prevalence of the old traditional

medical beliefs in country districts. The bacterium had taken his place or the demon, but the theory of making the place too hot for the demon or bacterium—till held. The speaker traced the history of several drugs showing how some were till used for the same disease as previously while others, such as digitalis, were now used for quite different ones. Peter's case was made to the ancient belief that woman was fertilized by water. This probably originated in the Nile Valley where no seed was sown from year to year but the overflow of the Nile fertilized the seed left over from the year before. This threw light on the popularity of well treatment for sterility and to restore health to weak children. The ancient operations of Caesarean section and trephining were described. In times past Caesarean section was generally performed on a dead or dying woman to save the child, but it was also used at times on the living. A detailed description was quoted of a completely successful operation by an amateur negro surgeon on a young native primipara in Uganda in 1834, where the excellent technique had many resemblances to modern European surgery. Pictures of a Neolithic skull showing trephining holes were shown. The operation was performed for epilepsy and severe headache as well as for fracture. Mention was made of the popularity of trephining in Cornwall in comparatively recent times. Several members took part in the subsequent discussion and the meeting finished with an appreciative vote of thanks to Dr. McKelvey.

#### METROPOLITAN COUNTIES BRANCH CAMBERWELL DIVISION

A meeting of the Camberwell Division was held at St. Cuthbert's Hospital, Camberwell, on December 13th, when Dr. P. C. Cox was in the chair.

A clinical demonstration was given by members of the hospital staff under the direction of the deputy medical superintendent, Dr. Robert. Several cases of great interest and practical value were shown together with a series of x-ray plates. The demonstration was followed by tea and a discussion.

A vote of sympathy to Dr. McKelvey in his illness proposed by Dr. Cox and seconded by Dr. Hazzard was carried unanimously. The meeting closed with a hearty vote of thanks to the hospital staff.

#### NORTH OF ENGLAND BRANCH DARTFORD DIVISION

The smoking concert arranged by the Dartford Division was held on December 14th. Mr. Clarke and Mr. Macfarlane, dental surgeons, gave some entertaining items of song and recitation. Dr. C. H. H. officiated at the piano and Dr. J. Brown sang a song. Dr. H. or House of Durham University gave an address on diabetes which was thoroughly enjoyed. Voluntary contributions were added to the inquiry being undertaken by the Association into the treatment of varicose ulceration and several members undertook to participate.

#### NORTH OF ENGLAND BRANCH DARTFORD DIVISION

A clinical meeting of the Dartford Division was held at Greenbank Hospital, Dartford, on November 15th, when a lecture was given by Mr. Dr. H. G. Orange. The lecture, which was framed round the wrist and ankle. The lecture, which was very well illustrated by good lantern slides or diagrams, afforded material for a full and interesting discussion. A hearty vote of thanks was accorded Mr. Orange at the close.

#### NORTH OF ENGLAND BRANCH TYNSIDE DIVISION

At a well-attended meeting of the Tynside Division held on November 25th, Dr. J. C. Spruce read a most interesting paper on recent advances in medical treatment. Emphasizing the importance of close clinical observation with the judicious use of every method he illustrated how advances had recently been made in the treatment of infants in the treatment of such conditions as rickets, diabetes mellitus and pernicious anaemia. A keen discussion demonstrated the lively interest aroused.

#### OXFORD AND PEABODY BRANCH OXFORD DIVISION

The annual meeting of the Division was held at the Peabody Infirmary, Oxford, on Wednesday, November 23rd. Dr. William Collier, in the chair, and four members were present.

The following officers were elected for 1928: President Dr. J. C. Spruce, Vice-Chairman Dr. C. H. H. (Clarke), Treasurer Dr. J. C. Spruce, Secretary Dr. J. C. Spruce, Honorary Secretary Dr. J. C. Spruce.

Dr. Collier, the retiring chairman, then read a paper on 'Some changes in medical and surgical practice during the past fifty years.' Dr. Collier, who was one of the first clinical assistants, gave a graphic description of the gradual transition to antiseptic surgery and remarked that the appalling nature of the condition prior to its adoption had been in sufficient emphasis. He alluded to Sir Hector Cameron's account of the surgical wards in the Glasgow Infirmary when he commenced his work there, including the ravage of the pital gangrene, erysipelas, septicaemia and pyæmia, the sickening odour pervading the ward, due to purulent changes in the wound, and the roaring and cries of the unhappy patient. In the early part of the nineteenth century John Bell, a distinguished surgeon, had stated that the pital gangrene no treatment was of any value and had advocated amputation at the level of the hip joint. Sir James Simpson, on the discovery of chloroform, had collected from the hospital surgeons all the cases of the disease and had amputations of limbs and published the figures in 1850. Out of 1,000 amputations in hospital practice 85 patients had died, a proportion of 2 in 5, whereas out of 2,063 amputations in private

practice only 226 patients had died or 1 in every 9. Simpson deduced that the large hospitals ought to be destroyed or replaced by huts built of iron, and much criticism had been aroused. Dr Collier described Lister's introduction of antiseptic surgery, relating incidents which occurred at King's College Hospital, where he was one of Lister's clerks, and mentioned how the students of that time were the first to give enthusiastic support to the new methods. He added that at the Annual Meeting of the British Medical Association at Leeds, in 1869, a Leeds surgeon attacked Lister and ridiculed his methods, it was interesting to note that some fifty-seven years later the oration celebrating the centenary of Lister's birth had been delivered by another and more celebrated Leeds surgeon, Sir Berkeley Moynihan. Dr Collier then passed to the events following the discovery by Koch of the tubercle bacillus in 1882 and the therapeutic changes which had followed. He commented on the prophylactic value of vaccine injections in the South African and the recent war, and said he had used antitubercular vaccines successfully for many years. Other subjects dealt with included blood pressure, the endocrine secretions, and necessary food factors.

#### SIR PIERRE LEONE BRANCH

The thirteenth scientific meeting of the Sierra Leone Branch was held on November 3rd. In the absence of the president, Professor Blacklock, who was out of the colony, the vice president, Dr Pratt, took the chair.

Dr McDONALD showed a case of larva migrans in an African child aged 2 years. It had appeared three weeks previously as an itching point on the palm of the proximal phalanx of the first finger on the right hand. The itching point had travelled distally, leaving behind it a tortuous raised line 2 to 3 mm thick on the knuckles, bases of the fingers, and dorsum of the hand. The discussion centred on the probable cause of the eruption and on its treatment.

Dr WILKINSON showed a case of erythema in a pregnant African woman. The condition was one of horn-like papules, some acuminate, situated on the outer aspect of both legs and arms. The eruption was pruriginous. He also showed a case of molluscum contagiosum in a child aged 18 months. The mother had three children, the oldest 8 years, and all of them had suffered from the disease, although she had never had it.

Dr EASMON showed a catheter made locally by a blacksmith at Pujehun for a Gullin man who had stricture and perineal fistula for eighteen years. Also a self-retaining bladder drainage tube for permanent cystostomy, showing the marks of recent calculus formation. Its lumen was nearly blocked by calculus after being *in situ* for only six weeks. He also showed a patient with a history of dislocation of the jaw, for which forcible but ineffectual attempts at reduction had been made eighteen months previously, together with skirgisms of the case.

Dr ALEXANDER showed a male aged 19 years with tinea cruris involving a large area on face, neck, chest, and limbs undergoing treatment with tincture of iodine, also a case of flaccid paralysis of the lower limbs present since birth. Both legs were much wasted and the right anesthetic, but the trunk and arms were unusually powerful and the patient could move and climb anywhere.

Dr RENNER showed a case of clinical primary yaws treated with disappearance of eruption after two injections of sulfurarsol. A month later the case relapsed, with primary lesions. Sulfarsol treatment was repeated without result and bismuth sodium potassium tetrastearate had no effect after the administration of 60 grams. The patient was a Syrian boy and as there was a family history of penicillium dermatitidis it was considered expedient to have a laboratory examination of the lesions. Dr Renner undertook to show the case again at the next clinical meeting of the Branch.

Mr QUINN STEWART showed a Fallopian tube and ovary which he had removed from a patient the previous day. The tube presented the appearance of a very early ectopic gestation in its interstitial position with a small rupture. The case was interesting clinically from the fact that the patient denied any irregularity in menstrual function, stating that she had had a normal period fifteen days before the onset of her present illness, the other point being that, although rupture had occurred over two days before and the abdomen was found to be full of blood clots and fluid blood, the patient was not seriously collapsed. Bleeding had apparently been intermittent. Mr Stewart showed also a case of haematocoele of the tunica vaginalis with abscess of the testicle. The tunica was much thickened and the epididymis enlarged and fibrotic so that the hydrocele had apparently been present for a considerable time although the patient was now only 22 years of age. The haemorrhage into the sac of the hydrocele was evidently of recent date following the septic infection of the testicle, but what the origin of the latter was had not been determined.

**SOUTH WALES AND MONMOUTHSHIRE PRINCIPAL SWANSEA DIVISION**  
On December 8th an official British Medical Association Lecture was delivered at the Hotel Metropole, Swansea by Dr S. A. KENNEDY WILSON (London) on epileptic variants. At its conclusion he was warmly thanked by the chairman, Dr DAVID E. EVANS, supported by Dr SLADEN and by Dr FREDERICK (Port Talbot), chairman of the Division. The lecture was considered to be one of outstanding brilliance. It was most interesting and showed deep and clear thought and certainly one of the best lectures which we have heard in many years.

The lecture was followed by a supper, there was a very fine attendance of medical men from the town and district.

## National Insurance.

### LONDON PANEL COMMITTEE

A MEETING of the London Panel Committee was held on December 20th, Dr H. J. CARDALE was in the chair. It was announced that the administrative expenses of the committee for 1928 had been estimated at £3,600, for which sum application would be made to the Insurance Committee. The Chairman remarked that the Panel and Pharmaceutical Committees together were allowed up to an expenditure equal to 2d per insured person, but actually the budget of the Panel Committee represented less than one halfpenny, so that the committee could not certainly be accused of extravagance.

#### Financiers in Control of Practices

The CHAIRMAN drew the attention of the committee to the case of a practice in the East End of London which, he alleged, was controlled by a firm of financiers. Apparently it was the practice of this firm to put a doctor in charge as a certain salary while the firm took the profits, and he believed that the profits were very large, the takings, on the lines of a "sixpenny doctor" practice, amounting to £25 a week. Patients were attracted by cheap fees, and undesirable notices—of a tenor inviting insured persons to transfer to the practice—were exhibited in the surgery. The financing of practices by lay firms, the practitioners themselves being without capital, appeared to be on the increase. Dr GREGG and he had discussed the matter with the Deputy Medical Secretary of the British Medical Association, Dr H. B. MORGAN, who asked whether the General Medical Council could not act in the matter. The secretary (Dr BARRESON) replied that the Registrar of the Council had stated that from the legal point of view no action could be taken, if a practitioner chose to be employed by anyone, lay person or other, so long as the lay employer did not meddle with the medical work there was no ground for interference. The secretary of one of the medical defence organizations took the same view.

Dr G. JONES pointed out that the financiers were the principals and the doctor their agent, and should the doctor be brought in the practice the principals would be associated with him in any proceedings, which might be taken. Dr PARRIBONE said that the financiers—by whom, he supposed, were meant moneylenders—would be unable to enforce a bond on the part of a doctor not to practise within a given area, and if that were so, there was nothing to prevent these practitioners becoming independent and setting up a practice in the neighbourhood in which case the financiers would find it unprofitable.

The secretary was instructed to report again on the subject of this particular practice when it was known what effect certain representations had had upon the exhibition of undesirable notices in the surgery.

#### Practice Arrangements

The Insurance Committee had requested the Panel Committee to offer observations upon the application of a practitioner who resided and practised in North London for permission to attend and treat insured persons at an address in or near the City, almost four miles distant. The opinion of the Panel Committee was that the practitioner could not provide the personal treatment for his insured patients required by the terms of service at two addresses, so far apart. Members mentioned two other cases in which practitioners were said to conduct large practices, in each case at two addresses in quite different parts of London.

The CHAIRMAN stated that a letter had been received from the Ministry of Health to the effect that the Ministry had allowed the appeal of a practitioner against the decision of the Insurance Committee not to permit her to employ an assistant. The ground of the committee's refusal had been the smallness of the number of insured persons on the practitioner's list. The Chairman thought that the result of this appeal would be all to the good.

#### Surgery Accommodation

It was reported that a practitioner had, quite unnecessarily, written to the Insurance Committee asking whether he might have two waiting rooms, one for private and the other for insurance patients, and the Insurance Committee having referred this matter to the Panel Committee, it was proposed that the question be discussed by the joint consultative committee of the two bodies.

Dr GREGG thought that the number of waiting rooms which a practitioner might have should not even be the subject of discussion. He agreed that it was important to secure that insured patients were not kept waiting longer than private patients, but that was all. Dr MORGAN said that any attempt to separate insured and private patients into different categories would prejudice the insurance service in the eyes of the public.

Two or three members said that they were compelled to have more than one waiting room, not on account of any distinction between private and insured patients, as such, but because of the arrival of persons in very dirty clothing—for example a drunken man's coat from his car—would come in, to the annoyance of other people in the waiting room.

The CHAIRMAN said that there was no distinction of classes to the right of the doctor to exercise his discretion. In fact, there would be no harm in talking over the subject with the

representatives of the Insurance Committee who would also surely be convinced that the doctor must have liberty in this matter.

It was agreed that the question be discussed by the joint committee.

### Ethical Matters

The Ethical Subcommittee stated that it had investigated a complaint against a practitioner that taking charge of a practice as a locum tenens during the absence of the principal he had secured the transfer of many of the patients to his own list. The number of such transfers during ten weeks had been eighty. The subcommittee could not regard the practitioner's explanation as satisfactory and recommended that particulars of the case be forwarded to the General Medical Council. This was agreed to but it was stated that the Panel Committee would not appear as prosecutor.

Another case had reference to the neglect of a patient by a practitioner to improve his signature on his prescriptions. He had been warned twice previously but the signature remained quite illegible. The secretary was instructed to warn the practitioner again informing him that should a further adverse report be received the matter would be referred to the Medical Service Subcommittee.

### BOOKS ADDED TO THE LIBRARY

The following books were received by the Library of the Association during October and November, 1927.

- Anonim. The Secret and His Social Attitudes 1927  
 Baile T. H. The Life and Times of Adolf Kraus 1927

#### The Future of General Practice

SIR—May I venture to draw your attention to a matter that has been on my mind for some time? I refer to the condition of the modern country general medical practitioner the world he is at present living in and the one he seems likely to come to.

Owing to a variety of causes the lot of the country doctor now is very different from what it was in the nineteenth century. All the savour of medical life is being gradually and steadily taken away. He is no longer the mainstay of our calling, strong and fit for any emergency, but his strength is being removed from him so that there is danger of his degenerating into a mere tag to the hospital surgeon and consultant, a scout to the maternity hospital and the nursing home, all the practice left to him being monopolized for the most part by the child welfare centre and the parish nurse or absorbed into the panel. All this of course is not any individual's fault. It is the direct result of what it would not become me to refer to. I need hardly say that there is no pleasure in posing as a medical Solomon Eagle. It is much nicer to think as so many do that everything is for the best in this best of all possible worlds, and that there is no need for us to clear our minds of cant.

There is no sound of alarm on this account or very little in the medical press, and still less interest is taken in this matter by the public but after wandering for more than forty years in the wilderness of general practice I know that what I say is true, and that so very sure to sound this note of discord. It may be that the open stable door has let most of the horses out but it is worth while to try to shut it and so save the few that remain—I am, etc.,

Derbyshire Dec 1st.

A COUNTY DOCTOR

#### Superannuation for Insurance Practitioners

SIR—No competent advocate has in recent times appeared to plead this special cause. So with apologies for intruding I crave a few lines to submit—crudely, I am afraid—a subject for possible consideration at the now no doubt imminent conference on remuneration of practitioners under the National Health Insurance Act. The point I should like to see a discussion on is that of superannuation—it is overdue—for such practitioners.

Among our representatives on various committees some at least are poor men's doctors. They have now done their bit by the N.H.I.C. and they have placed the public health departments on their pedestals. If our leaders now turn their eyes towards the poor doctor himself they will look on some of life's tragedies in the ranks of the plodding middle class practitioner into whose conditions in his no paternal commission has made inquiry, and who in life's winter has no guaranteed provision for the vagaries of fate.

The financial aspect is to some extent, a subject taboo with an honourable profession but we may as well be honest with ourselves. The riches of the majority have been acquired and few have entered the arena equipped with the proverbial silver spoon. The acquisition of substance is an indispensable feature in our lives and the profession owes something to those members who, amid their ministrations, have somewhat overlooked the importance of the material side in relation to self.

In connexion with the operations of the National Health Insurance Act a considerable sum of spare money has been amassed. Already pension schemes are in the field for the beneficiaries, the superintendents and the referees, and I certainly see no reason why the chief operators of the scheme the insurance doctors should not have a say in the share out.

Having decided on the general principle details could soon be arrived at. I might suggest a modest £500 per annum on attaining 60 years of age and after twenty years a satisfactory service under the National Insurance Act, the pensioner to at once relinquish both panel and private practice and not to engage in any remunerative employment. For those crippled by definite ill health a reduced allowance proportionate to length of service could be arranged. The capitation rate need not be raised and the bugbear of buying and selling practices could be eliminated.

Under such a scheme both panel practitioners and patients should profit. I am sure many practitioners hold views similar to my own and I trust they will endorse my remarks—I am, etc.,

December 17th

SENEX

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE

Surgeon Lieutenant Commander T N Dacey to the *Calliope*

### ROYAL NAVAL VOLUNTEER RESERVE

Surgeon Captain W K Mills, OBE, VD, is placed on the retired list.  
Surgeon Sublieutenant T A Brand to be Surgeon Lieutenant

### ROYAL ARMY MEDICAL CORPS

Major General S F St D Green, CB, CBE, RHP, late R.A.M.C., retires on retired pay.  
Colonel L Humphry, CMG, late R.A.M.C. to be Major General, vice Major General S F St D Green, CB, CBE, RHP, to retired pay.  
Lieut Colonel J F Martin, CMG, CBE, from R.A.M.C., to be Colonel, vice Colonel L Humphry, CMG, promoted.  
Lieut Colonel C R Sylvester Bradley is placed on the half pay list on account of ill health, August 12th 1927 (Substituted for notification in the *London Gazette* June 21st 1927).  
Major and Brevet Lieut Colonel C De la Cour OBE, from a Professor Royal Army Medical College is granted the rank of Temporary Colonel whilst employed as Consulting Surgeon to the British Army, vice Temporary Colonel J W West, CMG, KHS, vacated.  
Major H W Rusch OBE, to be Lieutenant Colonel, vice Lieut Colonel J I Martin CMG, CBE, promoted.

### ROYAL AIR FORCE MEDICAL SERVICE

Flight Lieutenant J C Osborne to R.A.F. Station, Upper Heyford

### REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS  
Lieut Colonel A H McN Mitchell having attained the age limit of liability to recall ceases to belong to the Reserve of Officers.  
Lieutenant J R E Sansom, from A.E.C. Regular Army Reserve of Officers, to be Lieutenant and retains his present seniority.

### INDIAN MEDICAL SERVICE

Major General T H Simons CSI, OBE, has been nominated by the Governor General to be a member of the Council of State in succession to the Hon. Major General A Hooton CBE resigned.  
Colonel A B Fry, CBE, DSO, to be Honorary Surgeon to the Victoria General Hospital, Calcutta, vice Major General G Tate KHS, vacated.  
Lieut Colonel (Brevet Colonel) J N Waller to be Colonel, vice Colonel R V Kukday, CBE.  
Lieut Colonel J Anderson, an Agency Surgeon on return from leave, is posted as Civil Surgeon, Sibn.  
Major R W G Hingston MC, has retired.  
The services of Major R V Morrison are placed permanently at the disposal of the Government of Burma.

### TERRITORIAL ARMY

#### ROYAL ARMY MEDICAL CORPS

Major C E J A Robinson MC, TD, having attained the age limit is retired and retains his rank with permission to wear the prescribed uniform.  
Lieutenant A M Cooke to be Captain.  
To be Lieutenants: Second Lieutenant C T Huxley (late RFA), H Watson and I McD Walker.  
Hypnotic Companies—Lieutenant C M Wilcox, late RFA (Special Reserve) to be Lieutenant.

## VACANCIES

**ABERDEEN** ROYAL ABERDEEN HOSPITAL FOR SICK CHILDREN—Lady Superintendent

**ALINGTON** VICTORIA HOSPITAL—House Surgeon Salary £150 per annum

**PARVA** URBAN DISTRICT COUNCIL—House Surgeon at the Accident and Surgical Hospital Salary £200 per annum

**BRISTOL** GENERAL HOSPITAL—Honorary Medical Registrar

**DERBYSHIRE** ROYAL INFIRMARY Derby—Honorary Gynaecologist

**FINCHLEY** TREATMENT CENTRE—(1) Two Minor Ailment Surgeons (2) Anaesthetist (3) Secretaries

**CULFORD** UNION—Resident Assistant Medical Officer at the Institution. Salary at the rate of £150 per annum

**HOLTHAM** FOR CONSUMPTION AND DISEASES OF THE CHEST Thompson SW 3—Two House Physicians Honorarium £50 for six months

**HULL** ROYAL INFIRMARY—Second House Surgeon Salary at the rate of £150 per annum

**LEEDS** PUBLIC DISPENSARY—Junior Resident Medical Officer Salary £150 per annum

**LINCOLN** THE LANE—Medical Superintendent Salary £700 per annum

**MANCHESTER** ANCOATS HOSPITAL—House Surgeon (Orthopaedic) Salary £100 per annum

**MANCHESTER** ST MARY'S HOSPITALS—(1) Two House Surgeons for the Whitworth Street West Hospital (Maternity) (2) House Surgeon to the Whitworth Park Hospital (Children) Salary at the rate of £50 per annum each

**MINISTRY OF PENSIONS**—Junior Resident Surgical Officer at the Highbury Group of Hospitals Birmingham Salary £300 per annum

**NORTHAMPTON** CROYDON SANATORIUM—Medical Superintendent Salary at the rate of £550 per annum

**PRINCE OF WALES** CENTRAL HOSPITAL, Tottenham N 15—Honorary Anaesthetist Honorarium £20 per annum

**ROYAL FREE HOSPITAL** Gray's Inn Road, W C 1—(1) Clinical Assistants for (a) Surgical Outpatients (b) Children's Department Outpatients (c) Throat, Nose and Ear Department Outpatients (d) Electro-therapeutic and Light Department Outpatients (e) Clinical Assistants in Medical Surgical and

**SEAFORD** HOSPITAL SOCIETY—Honorary Assistant Physician at the Hospital for Tropical Diseases, Endleigh Gardens W C

**WOOD GREEN** URBAN DISTRICT—Medical Officer of Health etc Salary £900 per annum rising to £1000

**CHIEF OF FINCHLEY SURGEON**—The appointment at Bricknell (Perks) is vacant. Applications to the Chief Inspector of Factories Home Office Whitehall S W 1

MEDICAL RELIEF UNDER THE WORKMEN'S COMPENSATION ACT for the Districts of the Bristol Wells Weston Super Mare and Yellon County Courts (Circuit No 53) Applications to the District Secretary Home Office Whitehall S W 1, by January 21st 1928

This list of vacancies is compiled from our advertisement columns where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning
